This volume discusses the relationship between economics, geopolitics and regional institutional growth and development in the Asia-Pacific region. How do states (re)define their relationships amid the current global power transition? How do rival actors influence the rules and formation of new institutions for their own benefit? What role will institutions take as independent actors in influencing and constraining the behavior of states? Institutional development in Asia is characterized by idiosyncratic and diverse motivations (both material and non-material), a variety of policy strategies (strategic and norm-based), and the looming question of China's future depth of involvement as its economic position becomes more stable and its confidence in foreign affairs grows. The book reflects the broadening definition of Asia by examining multiple perspectives, including Japan, China, South Korea, the United States, Australia, India, Russia, and Taiwan. In addition to state actors, the contributors address several important regional institutions in development such as the ASEAN (+3, +6, and the East Asian Summit), the Asian Infrastructure Investment Bank (AIIB), the Asian Development Bank (ADB), existing security alliances, and other bilateral institutions. Ultimately, this volume describes the unique, slow, and diverse growth of a multitude of regional institutions, the complexities of generating cooperation, membership concerns, and competition between states and with existing institutions in the context of China's increasing confidence and strength. This book will be of much interest to students of Asian politics, regional security, international organizations, and foreign policy.

The EUCOMES08, Second European Conference on Mechanism Science is the second event of a series that has been started in 2006 as a conference activity for an European community working in Mechanism Science. The first event was held in Obergurgl, Austria in 2006. This year EUCOMES08 Conference has come to Cassino in Italy taking place from 17 to 20 September 2008. The aim of the EUCOMES Conference is to bring together European researchers, industry professionals and students from the broad ranges of disciplines referring to Mechanism Science, in an intimate, collegial and stimulating environment. In this second event we have received an increased attention to the initiative, as can be seen by the fact that the EUCOMES08 Proceedings will contain contributions by authors even from all around the world. This means also that there is a really interest to have not

only a conference frame but even a need of aggregation for an European Community well identified in Mechanism Science with the aim to strengthen common views and collaboration activities among European researchers and institutions. I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work. These papers cover the wide field of the Mechanism Science. The program of EUCOMES08 Conference has included technical sessions with oral presentations, which, together with informal conversations during the social program, have enabled to offer wide opportunities to share experiences and discuss scientific achievements and current trends in the areas encompassed by the EUCOMES08 conference.

Today's fast-paced manufacturing culture demands a handbook that provides how-to, no-holds-barred, no-frills information. Completely revised and updated, the Handbook of Manufacturing Engineering is now presented in four volumes. Keeping the same general format as the first edition, this latest edition not only provides more information but makes it more accessible. Each individual volume narrows the focus while broadening the coverage, giving you immediate access to the information you need. Volume Three, Parts Fabrication: Principles and Process discusses efficient deductive and systematic approaches to machine debugging while providing a refresher on the principles of structural mechanics. Edited by Richard Crowson with contributions from experts in each field, the book focuses on establishing communication between manufacturing and design engineers and machine-building technicians. The discussions of engineering design fundamentals, free-body diagrams, stresses, forces, and strength of materials help readers understand and solve counter-intuitive problems. The coverage includes material characteristics of metals, conventional fabrication processes, laser welding, modeling, and nontraditional machining methods. Assisting design engineers and machine builders in the successful execution of their tasks, the book recommends steps to improve technical problem solving and communication techniques. It provides understanding of how to incorporate deductive reasoning, systematic engineering, human interaction, and corporate cultural influences into manufacturing processes. This book proposes a selective approach for states with more advanced human rights protection to establish a human rights court for Southeast Asia. It argues the inclusive approach currently employed by ASEAN to set up a human rights body covering all member states cannot produce a strong regional human rights mechanism. The mosaic of Southeast Asia reveals great diversity and high complexity in political regimes, human rights practice and participation by regional states in the global legal human rights framework. Cooperation among ASEAN members to protect and promote human rights remains limited. The time-honored principle of non-interference and the "ASEAN Way" still predominate in relations within ASEAN. These factors combine to explain why the ASEAN Intergovernmental Commission on Human Rights is unlikely to be strong and effective in changing and promoting regional human rights protection.

Transforming Newsrooms offers a practical guide to navigating structural and culture change for news organizations facing economic disruption in today's rapidly changing media landscape. Even when the need for change is obvious, the best ideas and intentions are often not followed by successful execution. This book offers a road map for understanding the obstacles to change in news organizations and how to overcome them. Providing a detailed overview of the ways in which news processes and routines are being fundamentally altered to meet new demands for multimedia, interactivity, and immediacy, the book offers tips to help news organizations better serve communities by understanding what information people need and how they want to engage and collaborate. The book also features a variety of case studies and examples from news organizations of all kinds, including a 10-year in-depth investigation of the Christian Science Monitor, the first national news organization to stop its daily presses for a digital report. Transforming Newsrooms is an invaluable resource for students and media professionals alike, demonstrating how to make research on organizational change actionable and help build a more equitable journalism model that will survive and thrive when we need it most.
