Arborists' Certification Study Guide

Fully updated and greatly enhanced, the Third Edition of Urban Forestry addresses current issues in planning, establishing, and managing trees, forests, and other elements of nature in urban and community ecosystems. The authors discuss why we have trees in cities and how we use them, clarify the appraisal and inventory of urban vegetation, and extensively delve into the planning and management of public as well as private vegetation. As urban forestry continues to evolve as a profession, foresters and arborists can expect many challenges as well as opportunities. The continuing development of cities has become linked to a much greater emphasis on urban vegetation, the growing demand for recreation amenities within the urban environment, and the careful and successful management of vegetation in an urban ecosystem. New ways to incorporate the highly versatile urban forest resource into the urban fabric will undoubtedly benefit the lives of its residents.

An easy to understand non-laboratory based system for determining the causes of ill-health in trees. The emphasis is on problems of species grown for non-commercial purposes, but nearly all causes of ill-health in trees are covered on some detail, apart from damage from biting insects and mammals. Subjects covered include: diagnostic procedure, the known problems of virtually all tree genera used for amenity purposes in Great Britain; prevention and treatment of pests, diseases and disorders; decay and tree safety; and tree pest and disease legislation. Additions to the second edition include a major section of the identification of the principal wood-rotting fungi on trees, and items on water logging and exotic pests and diseases.

Well organized, clearly written, and beautifully illustrated with many new photos, this seventh edition is an encyclopedic resource--the first place to turn for information on dogwoods and elms, magnolias and redwoods, or any other tree growing in North America. 387 halftones.

This is a training manual for the beginning ground worker in the tree care industry. This book walks the reader--step-by-step--through a typical day of the arboricultural ground worker. From the shop to the job site, all the skills necessary to becoming a successful ground worker are presented in detail.

"This fantastic new guide, written by Guy Watson, is a must have for arborists and contains the most common tree pests and diseases likely to be encountered on a day-to-day basis. It is designed to help the arborist to identify and diagnose potential threats, and also contains useful information on treatment options, including current chemical treatments and their availability, etc. It also addresses the subject of practical biosecurity--what we should be doing on a daily basis to reduce the risk of moving infection from site to site."--Publisher's description.

A comprehensive guide to the care of trees, this book covers all aspects of arboriculture from the fundamentals of tree growth and development to developing plant health care programs. It discusses aspects of site selection and modification including climate, and soil and water management. The book follows the tree from selection in the nursery to planting and aftercare through such routine practices as pruning, fertilization, support systems, and plant health care. Key management situations such as tree preservation, hazard assessment, and problem diagnosis are discussed in detail. The fourth edition offers several new features that the student of arboriculture and practicing arborists will find valuable: Reorganization of topics to improve continuity of information Addition of overviews and summaries for each chapter Updated assessment of tree care practices such as soil amendments, mycorrhizae, and tree growth regulators Thorough evaluation of the benefits from trees (economic, environmental, ecological, and psychological) including examples of the most recent research on cost-benefit analysis of trees in urban areas Emphasis on special management situations such as structural soils, root-pavement conflicts, and remnant forests

Many arborists learn tree work practices without fully understanding the biological and physiological principles behind them. However, outcomes for the health and longevity of trees are greatly improved when an arborist understands the science behind the care of tree root systems and crowns. In *Applied Tree Biology*, Drs. Hiron and Thomas draw upon their decades of experience in the laboratory, classroom, and the field – as well as the expertise of distinguished contributors to this volume – to provide those responsible for tree care with the scientific information that informs best practices for planting, pruning, soil decompaction, irrigation, and much more. Takes a multidisciplinary approach, integrating knowledge from plant biology, physiology, arboriculture, ecology, and more Provides a systematic presentation of fundamental tree biology and the scientific principles informing high quality tree care Presents accessible scientific information and best practices that help promote the health and longevity of trees Reflects the authors' decades of experience as tree biology researchers and educators, as well as their years of professional experience across the globe *Applied Tree Biology* is an indispensable source of practical, succinct information on tree biology, physiology, and ecology for professionals and interested amateurs involved with the care of trees. Arborists, foresters, and horticulturists at all stages of their careers will find this text particularly useful.

This text is a comprehensive, analytical, and logically organized guide offering a strong scientific and technical background for training and practice in the field of arboriculture. The third edition represents a complete revision and update to reflect the latest trends in plant selection and maintenance practices and evaluate them based on the most recent research and experience. All aspects of tree, shrub and vine care are covered, including plant structure and function, plant selection, site selection and preparation, climatic influences, transplantation, water/soil/nutrient management, environmental hazards, diseases, insects, and IPM (Integrated Pest Management).

The arborist examination is designed to assess the fundamental knowledge and skills that all tree care professionals should have, regardless of their area of practice.
