Spanish-speaking patients are no rarity in United States hospitals and clinics, as many English-speaking health care providers have discovered. To help these providers better communicate with the patients they serve, Ana Malinow Rajkovic has prepared the Manual for (Relatively) Painless Medical Spanish, a lively and innovative self-teaching guide to the grammar, pronunciation, and medical vocabulary of Spanish. Presented in a systematic and highly entertaining fashion, twelve lessons cover some of the most commonly encountered situations. These include the family clinic, the emergency room, appendicitis, the social chat, pregnancy, family planning, pelvic inflammatory disease and urinary tract infection, depression, children with asthma, patients with angina, explaining a

venipuncture and a spinal tap, and patients with shortness of breath. Each lesson closes with a bilingual interview that includes vocabulary and grammar introduced in that lesson. A guide to the medical history and physical examination appears in English and Spanish in the appendix. Excellent in the classroom or for independent learning, the Manual will enable health care providers better to understand and supply the needs of Spanish-speaking patients.

comprehensive guide revolutionizes the way Chinese medicine is used and taught in the twenty-first century. Such an ancient system might seem outdated for contemporary life, but this book reveals how it's actually perfect for modern concerns—everything from stress caused by social media to round-the-clock access to rich and fatty food to anxiety over endless checklists and responsibilities. Chinese Medicine for the Modern World discusses six common syndromes with a focus on the three internal problems of liver qi stagnation, heart heat, and spleen damp. To heal these syndromes, author E Douglas Kihn offers practical strategies and specific directions for substituting unhealthy habits with healthy ones. Discover the Five Elements, the Eight Principles, and the twelve primary channels. Explore hands-on exercises, chapter study questions, clarifying images, and more. This exceptional book helps you understand and utilize the amazing possibilities of Chinese medicine for current times. The publication of Chinese Medicine for the Modern World will help to accomplish three goals: The popularization of the language and theory of Chinese medicine everywhere, so that Chinese medical theory replaces or at least co-exists with emergency/bio-medical theory in people's minds; a thorough reorganization of the field of healthcare in which preventative and holistic disciplines replace medical doctors in cases other than emergencies; and a comprehensive reform of the teaching and practice of Chinese medicine itself, adapting this ancient medical wisdom to the unique health problems of our modern world.

Comprehensive Overview of Advances in Olfaction The common belief is that human smell perception is much reduced compared with other mammals, so that whatever abilities are uncovered and investigated in animal research would have little significance for humans. However, new evidence from a variety of sources indicates this traditional view is likely overly simplistic. The Neurobiology of Olfaction provides a thorough analysis of the state-of-the-science in olfactory knowledge and research, reflecting the growing interest in the field. Authors from some of the most respected laboratories in the world explore various aspects of

olfaction, including genetics, behavior, olfactory systems, odorant receptors, odor coding, and cortical activity. Until recently, almost all animal research in olfaction was carried out on orthonasal olfaction (inhalation). It is only in recent years, especially in human flavor research, that evidence has begun to be obtained regarding the importance of retronasal olfaction (exhalation). These studies are beginning to demonstrate that retronasal smell plays a large role to play in human behavior. Highlighting common principles among various species – including humans, insects, *Xenopus laevis* (African frog), and *Caenorhabditis elegans* (nematodes) – this highly interdisciplinary book contains chapters about the most recent discoveries in odor coding from the olfactory epithelium to cortical centers. It also covers neurogenesis in the olfactory epithelium and olfactory bulb. Each subject-specific chapter is written by a top researcher in the field and provides an extensive list of reviews and original articles for students and scientists interested in further readings.

Talking math with your child is simple and even entertaining with this better approach to shapes! Written by a celebrated math educator, this innovative inquiry encourages critical thinking and sparks memorable mathematical conversations. Children and their parents answer the same question about each set of four shapes: "Which one doesn't belong?" There's no one right answer--the important thing is to have a reason why. Kids might describe the shapes as squished, smooshed, dented, or even goofy. But when they justify their thinking, they're talking math! Winner of the Mathical Book Prize for books that inspire children to see math all around them.
