There is no peace with hunger. Only promises and promises and no fulfillment. If there is no job, there is no peace. If there is nothing to cook in the pot, there is no peace. - Oscar, a 57-year-old man, El Gorri n, Colombia They want to construct their houses near the road, and they cannot do that if they do not have peace with their enemies. So peace and the road have developed a symbiotic relation. One cannot live without the other. . . . - A community leader from a conflict-affected community on the island of Mindanao, Philippines Most conflict studies focus on the national level, but this volume focuses on the community level. It explores how communities experience and recover from violent conflict, and the surprising opportunities that can emerge for poor people to move out of poverty in these harsh contexts. 'Rising from the Ashes of Conflict' reveals how poor people's mobility is shaped by local democracy, people's associations, aid strategies, and the local economic environment in over 100 communities in seven conflict-affected countries, including Afghanistan. The findings suggest the need to rethink postconflict development assistance. This is the fourth volume in a series derived from the Moving Out of Poverty study, which explores mobility from the perspectives of poor people in more than 500 communities across 15 countries.

Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measures and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Traumatic brain injury (TBI) remains a significant source of death and permanent disability, contributing to nearly one-third of all injury related deaths in the United States and exacting a profound personal and economic toll. Despite the increased resources that have recently been brought to bear to improve our understanding of TBI, the development of new diagnostic and therapeutic approaches has been disappointingly slow. Translational Research in Traumatic Brain Injury attempts to integrate expertise from across specialties to address knowledge gaps in the field of TBI. Its chapters cover a wide scope of TBI research in five broad areas: Epidemiology Pathophysiology Diagnosis Current treatment strategies and sequelae Future therapies Specific topics discussed include the societal impact of TBI in both the civilian and military populations, neurobiology and molecular mechanisms of axonal and neuronal injury, biomarkers of traumatic brain injury and their relationship to pathology, neuroplasticity after TBI, neuroprotective and neurorestorative therapy, advanced neuroimaging of mild TBI, neurocognitive and psychiatric symptoms following mild TBI, sports-related TBI, epilepsy and PTSD following TBI, and more. The book integrates the perspectives of experts across disciplines to assist in the translation of new ideas to clinical practice and ultimately to improve the care of the brain injured patient.

Drawing on a body of empirical, qualitative work spanning three decades, this unique text traces the significance of critical social research and critical analyses in understanding some of the most significant and controversial issues in contemporary society. Focusing on central debates in the UK and Ireland – prison protests; inner-city uprisings; deaths in custody; women's imprisonment; transition in the north of Ireland; the 'crisis' in childhood; the Hillsborough and Dunblane tragedies; and the 'war on terror' – Phil Scraton argues that 'marginalisation' and 'criminalisation' are social forces central to the application of state power and authority. Each case study demonstrates how structural relations of power, authority and legitimacy, establish the determining contexts of everyday life, social interaction and individual opportunity. This book explores the politics and ethics of critical social research, making a persuasive case for the application of critical theory to analysing the rule of law, its enforcement and the administration of criminal justice. It is indispensable for students in the fields of criminology, criminal justice and socio-legal studies, social policy and social work.

Oral contraceptives for family planning worldwide have revolutionized the reproductive lives of millions of women since their introduction in the 1960s. Later on, a variety of side-effects including cardiovascular diseases was recognized. In response to these concerns, new generations of combined oral contraceptives were developed that featured lower dose of estrogen and newer, more potent

progestogens. The effectiveness and ease of use of combined hormonal contraceptives suggest that they will continue to be used to a significant extent in the future. This ninety-first volume of IARC Monograph.

This book collects the articles published in the Special Issue "Polymeric Materials: Surfaces, Interfaces and Bioapplications". It shows the advances in polymeric materials, which have tremendous applications in agricultural films, food packaging, dental restoration, antimicrobial systems, and tissue engineering. These polymeric materials are presented as films, coatings, particles, fibers, hydrogels, or networks. The potential to modify and modulate their surfaces or their content by different techniques, such as click chemistry, ozonation, breath figures, wrinkle formation, or electrospray, are also explained, taking into account the relationship between the structure and properties in the final application. Moreover, new trends in the development of such materials are presented, using more environmental friendly and safe methods, which, at the same time, have a high impact on our society.

The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and ASE certification in the USA.

Why do we keep getting the same jobs, taking on the same relationships, and finding ourselves in the same emotional traps? Dr. Joe Dispenza not only teaches why people tend to repeat the same negative behaviors, he shows how readers can release themselves from these patterns of disappointment. With the dynamic combination of science and

accessible how-to, Dispenza teaches how to use the most important tool in one's body and life—the brain. Featured in the underground smash hit of 2004, "What the Bleep Do We Know!?", Dispenza touched upon the brain's ability to become addicted to negative emotions. Now, in his empowering book *Evolve Your Brain* he explains how new thinking and new beliefs can literally rewire one's brain to change behavior, emotional reactions, and habit forming patterns. Most people are unaware of how addicted they are to their emotions, and how the brain perpetuates those addictions automatically. In short, we become slaves to our emotional addictions without even realizing it. By observing our patterns of thought, and learning how to 're-wire the brain' with new thought patterns, we can break the cycles that keep us trapped and open ourselves to new possibilities for growth, happiness and emotional satisfaction. Key Features A radical approach to changing addictive patterns and bad habits. Based on more than twenty years of research. Bridges the gap between science, spirituality and self-help—a formula that has proven success. Easy to understand and written for the average reader.

To help us on our way, Coutinho introduces us to people in various world religions—from Hindu friends to Buddhist teachers to St. Ignatius of Loyola—who have shaped his spiritual life and made possible his deep, personal relationship with God.

Bullying is now widely recognised as a serious problem that affects many children in schools. It can take many forms, including direct verbal and physical harassment and indirect forms such as deliberate exclusion and the targeting of individuals using cyber technology. Continual and severe bullying can cause both short term and long term damage, making it difficult for victims to form intimate relationships with others and for habitual bullies to avoid following a delinquent lifestyle and becoming perpetrators of domestic violence. Even though this type of abuse affects many of our school children, Ken Rigby believes there are grounds for optimism. This passionate and motivating book shows that there are ways of reducing the likelihood of bullying occurring in a school and effective ways of tackling cases when they do occur. Using up-to-date studies, *Bullying in Schools* helps us to understand the nature of bullying and why it so often takes place in schools. Importantly, it examines and evaluates what schools can do to promote more positive peer relationships within the school community and take effective and sustainable action to deal with problems that may arise. Teachers, parents, school leaders, policy makers, and health professionals will find it invaluable and empowering.

The severe acute respiratory syndrome virus (SARS) first emerged in southern China in November 2002 and in the following months spread to 12 other countries in the Western Pacific region (where 95 per cent of the global cases took place) with devastating force. By July 2004, when the epidemic was finally declared over, it had killed nearly 800 people including many healthcare workers. Although by some standards, this first emerging and readily transmissible disease of the 21st century was not a big killer, it caused more fear and social disruption than any other outbreak of our time. Written largely by the public health experts and scientists involved in efforts to control the epidemic, this publication examines the emergence and spread of SARS, the public health measures taken to deal with it, the epidemiology of the SARS coronavirus (SAR-CoV) and vaccine development, and its impact on people and economies in individual countries, in the region and around the world.
