Whatever happened to him actually outshines anything I've had my James Bond do. --Ian Fleming James Bond: author, ornithologist, marksman, and . . . identity-theft victim? When James Bond published his landmark book, *Birds of the West Indies*, he had no idea it would set in motion events that would link him to the most iconic spy in the Western world and turn his life upside down. Born into a wealthy family but cut off in his early twenties, James Bond took off to the West Indies in search of adventure. Armed with arsenic and a shotgun, he took months-long excursions to the Caribbean to collect material for his iconic book, *Birds of the West Indies*, navigating snake-infested swamps, sleeping in hammocks, and island-hopping on tramp steamers and primitive boats. Packed with archival photos, many never before published, and interviews with Bond's colleagues, here is the real story of the pipe-smoking, ruthless ornithologist who introduced the world to the exotic birds of the West Indies.

Life With Mother' is a humorous autobiographical book of stories compiled in 1935 by American author and cartoonist Clarence Day Jr. He wrote humorously about his family and life. "Most of the chapters of this book were published before Clarence's death, but some were still in manuscript. These had to be sorted carefully because he had a habit of writing on whatever scrap of paper was handy--backs of envelopes, tax memoranda, or small pads of paper which he could hold in his hands on days when they were too lame for the big ones." -Editor's Note

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and

formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

A deeply moving story of the beauty and brutality of life, and death, on the world's most unpredictable and perilous mountain. Sitting just lower than Everest at 8,611 meeres above sea level on the China–Pakistan border, the Savage Mountain claims the lives of even the most experienced climbers. Alongside severe altitude, the weather is notoriously volatile and the climb relentlessly steep. A staggering one in four attempts result in death on the mountain. In One Man's Climb, Adrian Hayes details an intensely personal account of his attempts to climb K2 – first in 2013 and again in 2014. Absorbing and self-reflective, his journey is as much a story of climbing a mountain as it is a testament to the human spirit's ability to endure.

Popular consensus says that the US rose over two centuries to Cold War victory and world domination, and is now in slow decline. But is this right? History's great civilizations have always lasted much longer, and for all its colossal power, American culture was overshadowed by Europe until recently. What if this isn't the end? In *History Has Begun*, Bruno Maes offers a compelling vision of America's future, both fascinating and unnerving. From the early American Republic, he takes us to the turbulent present, when, he argues, America is finally forging its own path. We can see the birth pangs of this new civilization in today's debates on guns, religion, foreign policy and the significance of Trump. Should the coronavirus pandemic be regarded as an opportunity to build a new kind of society? What will its values be, and what will this new America look like? Maes traces the long arc of US history to argue that in contrast to those who see the US on the cusp of decline, it may well be simply shifting to a new model, one equally powerful but no longer liberal. Consequently, it is no longer enough to analyze America's current trajectory through the simple prism of decline

vs. progress, which assumes a static model-America as liberal leviathan. Rather, Maes argues that America may be casting off the liberalism that has defined the country since its founding for a new model, one more appropriate to succeeding in a transformed world.

Conventional wisdom says the universe is infinite. But could it be finite, merely giving the illusion of infinity? Modern science is beginning to drag this abstract issue into the realm of the real, the tangible and the observable. HOW THE UNIVERSE GOT ITS SPOTS looks at how science is coming up sharp against the mind-boggling idea that the universe may be finite. Through a decade of observation and thought-experiment, we have started to chart out the universe in which we live, just as we have mapped the oceans and continents of our planet. Through a kind of cosmic archaeology and without leaving Earth, we can look at the pattern of hot spots left over from the big bang and begin to trace the 'shape of space'. Beautifully written in a colloquial style by a world authority, Janna Levin explores our aspirations to observe our universe and contemplate our deep connection with it.
