Did Dr. Strangelove's America really learn to "stop worrying and love the bomb," as the title of Stanley Kubrick's 1964 film would have us believe? What has that darkly satirical comedy in common with the impassioned rhetoric of Martin Luther King's "I Have a Dream" speech or with the beat of Elvis Presley's throbbing "I'm All Shook Up"? They all, in Margot Henriksen's vivid depiction of the decades after World War II, are expressions of a cultural revolution directly related to the atomic bomb.

From reviews of earlier editions: "This fine book is an authoritative and comprehensive summary of a geographically and zoologically varied region of the Pacific and is an important contribution to ichthyology. The authors have done an excellent job summarizing the complex and diverse fish fauna of the Sea of Cortez; the illustrators ...provide a great service to the reader in providing their collection of superb drawings and paintings." —Aquaculture "The collaboration of an ecologist, a taxonomist, and an artist-photographer with years of experience in the Gulf of California has resulted in an excellent book on the reef fishes of this area.... Certainly this merging of scientific disciplines has produced a book with a broader scientific, as well as popular, coverage of a regional fish fauna than many of its contemporaries." —Terra "Hallelujah! Fishwatchers, natural historians, and biologists alike are rejoicing with the reprinting of this guide.... Contains many fine drawings, color plates, and photographs; easy-to-read text emphasizing ecology, Spanish names for each fish (a nice touch).... A great addition to your library, whether you want to study fish or just catch and eat them." —Books of the Southwest First published in 1979, this guide has become the standard resource for scientists, divers, and spearfishers interested in the fishes of the tropical Pacific Coast. The authors have revised and updated this edition to include the most current taxonomic information, additional species descriptions, and new illustrations.

A booklet to provide guidance for local stakeholders, managers and policy makers on appropriate management approaches for coral reefs that have been severely degraded through bleaching or other causes. The widespread bleaching event in the Western Indian Ocean in 1998-9 provides a general case study that will result in recommendations of value to reef managers in all regions.

"These attractive, pocket-sized guides for fish watchers have been carefully written by Goodson and profusely illustrated in striking water colors by Phillip Weisgerber. Although designed for divers, fishers, aquarists and other nonprofessionals, these little books will undoubtedly find their way on to the shelves of many ichthyologists who will value them as quick references and for providing life-like, color renditions of many fish species found in American coastal waters."—Copeia "Goodson's guidebook is designed for the fishwatcher—whether skin or scuba diver, fisherman, aquarist, schoolchild or casual tourist exploring the shore—who seeks to know more about our marine life."—Palos Verdes Peninsula News
