Equine Behavioral Medicine provides an essential resource for those who work with, study, and provide care to horses. It provides critical knowledge to help users understand the complex aspects of their behavior in order to benefit the animal, observe safe practices, and advance research in this area. The book includes current information on normal horse behavior and problem behaviors, particularly those associated with medical conditions, changes in the nervous system, and the use of drug therapy. Readers will gain a comprehensive understanding of the differences of the sensory systems and the concepts of learning that are helpful for successful treatments and safety. With the use of psychopharmacology becoming increasingly common by veterinarians, including for abnormal behaviors, is important to understand the rationale for the use of these medications. Understanding the intimate relationship between behavior, physiology, and health is key to practitioners, students, professionals, and others who work with, or care for, horses. Pulls together the current published science on equine behavior into chapters covering a variety of specific behavioral topics Features discussion based on an extensive review of the literature Includes a thorough reference list in each chapter for those who might be interested in further research

This book deals with the role the Italian international banks played during the inter-war period as intermediaries between the main financial markets (London, New York, Paris) and the peripheral areas (Central and Eastern Europe, South America) and the same financial markets and Italy itself. The main objective of this book is to show that the development of large industrial sectors in Italy during the fascist period depended on the activity that the Italian banks carried out as intermediaries on the major financial markets. This activity was precisely about borrowing the financial means which Italy lacked. However, by doing this, some sort of dependence on these foreign financial structures was generated. This situation threatened to deteriorate up to the point of the coming short of the bases holding the Italian economy, which is exactly what happened in the 1930s. The book also aims at demonstrating that this kind of dependence was unavoidable and that even before the war there were in Italy favourable conditions for a high integration at European level, which can explain, at least partially, for the motivations behind Italy's constant support to the European integration during the post-II World War period.

Blackwell's *Five-Minute Veterinary Consult: Equine, Second Edition* is a concise, comprehensive resource for all topics related to equine medicine. Now fully revised and updated, this authoritative quick reference provides thorough coverage of practical information, arranged alphabetically for efficient searching. Bringing together the expert knowledge of 175 contributors, the popular *Five-Minute Veterinary Consult* format allows rapid access to complete coverage of nearly 500 diseases and conditions seen in the horse. This reference is an essential tool for students and practicing veterinarians to quickly diagnose and treat equine patients.

Animals big and small introduce pre-schoolers to basic math concepts. With the help of the colorful animals in this book, even the youngest child will be able to grasp the idea of ratio and relative size. The opening illustration shows an elephant, followed by a simple phrase "1 polar bear is smaller than an elephant." An illustration of an elephant, rather than the word, challenges young children to recall the name of the animal. Then, on the facing page, an illustration shows how many polar bears would make up one elephant. It's seven! Subsequent spreads build on this concept--turn the page and readers will discover how many lions make a polar bear, and so on. The animals

become progressively smaller, until the last comparison between a lemur and flea. But the book doesn't end there. Children learn that there is one animal that is bigger than them all: a whale, and that it takes all the animals in the book to make just one. Preschoolers will enjoy this fresh approach that teaches them the names of animals as well as the concept of relative size.

A small masterpiece, Pea's lyrical autobiographical novel paints a fiery and intimate portrait of an old man through the bold brushstrokes of his grandson.

The passions and tensions between the old eccentric and his brothers play themselves out in mythical sketches before a vivid backdrop of the hills of Lunigiana. Moscardino, the first novella of his tetralogy, *Il romanzo di Moscardino*, is anarchic and haunting. Pound conducts Pea's vernacular song, allowing images to flow from the land, the flesh, and beyond.

Understanding the flexibility and limits of behaviour is essential to improving both the horse's welfare and its performance. This book tackles the fundamental principles which will enable owners, riders, trainers and students to understand scientific principles and apply them in practice. Subjects covered include the analysis of influences on equine behaviour, the perceptual world of the horse, learning and training techniques including the latest developments in "join-up" and "imprint training".

Making Prestigious Places investigates the spatial dimension of luxury, both as a sector involving activities, operators and investments, and as a system of values acting as a catalyst for recent urban transformations. Luxury shares a well-established connection to the city, as a place of production, consumption and self-representation, and continues to grow despite economic difficulties. This edited collection includes case studies from Europe, North and South America, Asia and the Middle East to create a dialogue around these developments and the challenges presented, such as the tension between the idea of prestige and current values in urban planning, the discussion between academic reflections and operational practices, and how these interact with the long-term economic and social dynamic of the city. With rich analysis and a preface written by Patsy Healey, this book will be an important addition to the discourse on luxury for urban planners and researchers.

This chart targets middle to late elementary grades. With bright, photographic images, the poster helps teach the parts of a story.

From Michelin-starred winners to farmers who learned everything from the internet, you will learn how 22 chefs from around the world have built and grown their businesses from scratch. We live in a world where material products have increasingly become vehicles for intangible symbolic and aesthetic messages. A very sizeable marketing and advertising industry produces only images and symbols---the immaterial dimension that `sells' material commodities. The economic boom that accelerated in the 1990s and crashed so spectacularly in 2008 was based largely on immaterial consumption, as capitalism tried to overcome the crisis of the Fordist regime by throwing itself into the new, so-called knowledge economy. --

This fascinating 2005 book gives an insight into the behaviour of the domestic horse. Suitable for scientists, professionals and enthusiastic owners.

One of the most outspoken critics of the modern dressage world reveals some disturbing facts about the physical, anatomical, and mental effects through official dressage guidelines as issued by the German Horse Society (FN) on horses. By comparing these with philosophies of masters of classical riding such as La Gueriniere and Baucher, he shows possible solutions to the challenging situation of modern competitive dressage. After describing the effects of modern dressage, breeding, and business, the author suggests a classical alternative—the philosophy of "legerity." (Piano Solo Songbook). "I think there is a similarity between the infinite big and the infinite smallness of everything," says Yann Tiersen. "It's the same experiment looking through a microscope as it is a telescope." Named after a chapel in a small village on the island of Ushant, Kerber marks a new chapter in critically-acclaimed composer Yann Tiersen's career. A chapter still true to Tiersen's nuanced and subtle approach

but one that sets out with his most overtly electronic material to date. Beautifully textured, highly immersive and thoughtfully constructed, Tiersen creates an electronic world, providing an environment in which the piano source exists. A sense of place has often been a central theme in Tiersen's work and here that is no different. Each track is tied to a place mapping out the immediate landscape that surrounds Tiersen's home, linking back to his thoughts on the possibilities of the infinite smallness. This official, exclusive folio is beautifully printed on high-quality, uncoated paper with striking graphic artwork. All seven pieces are presented for solo piano and follow an exclusive introduction to the project.

- Hundreds of hotel and restaurant recommendations, with Fodor's Choice designating our top picks
- Coverage of St. Thomas, St. John, St. Croix, Tortola, Virgin Gorda, and other British Virgin Islands

In the twentieth century there were two great political and social paradigms, the liberal-democratic and the libertarian (in its various socialist, anarchist, and communist delineations). The central idea of the first approach is isonomy: the exclusion of any discrimination on the basis that legal rights are afforded equally to all people. The central idea of the second approach is rather to acknowledge and address a broader spectrum of known inequalities. Such an approach, Bellanca argues, allows the pursuit of pluralism as well as a more realistic and complex view of what equality is. Here he analyzes the main economic and political institutions of an isocratic society, and in so doing, effectively outlines how a utopian society can be structurally and anthropologically realized. This book is ideal reading for an audience interested in the

critique of contemporary capitalism through a renewed perspective of democratic socialism and leftist libertarianism. Nicolò Bellanca is Associate Professor of Development Economics at the University of Florence, Italy. He is the author of a broad array of scholarly articles, books and textbooks about both the history of economic thought and development economics. His current research focuses on the theory of institutional change.
