This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Computer Networks and Internets is appropriate for all introductory-to-intermediate courses in computer networking, the Internet, or Internet applications; readers need no background in networking, operating systems, or advanced mathematics. Leading networking authority Douglas Comer presents a wide-ranging, self-contained tour of the concepts, principles, and technologies that enable today's Internet to support applications ranging from web browsing to telephony and multimedia. This Fifth Edition has been thoroughly reorganized, revised, and updated: it includes extensive new coverage of topics ranging from wireless protocols to network performance, while reducing or eliminating coverage of older protocols and technologies. Comer begins by illuminating the applications and facilities offered by today's Internet. Next, he systematically introduces the underlying network technologies and protocols that make them possible: low-level data communications; packet switching, LAN, and WAN technologies; and Internet protocols such as TCP, IP, UDP, and IPv6. With these concepts and technologies established, he introduces several of the most important contemporary issues faced by network implementers and managers, including quality of service, Internet telephony, multimedia, network security, and network management.

Comer has carefully designed this book to support both top-down and bottom-up teaching approaches. Students need no background in operating systems, and no sophisticated math: Comer relies throughout on figures, drawings, examples, and analogies, not mathematical proofs.

A TELEGRAPH BOOK OF THE YEAR A TIMES BOOK OF THE YEAR A WATERSTONES PAPERBACK OF THE YEAR 'Superbly told' Simon Heffer, Daily Telegraph 'A hamper of treats' Sunday Telegraph '[Grant employs] scholarship and depth of evidence' London Review of Books 'These tales of eleven trials are shocking, squalid, titillating and illuminating: each of them says something fascinating about how

our society once was' The Times 'Deceptively thrilling' Sunday Times 'Excellent . . . Thomas Grant offers detailed accounts of eleven cases at the Old Bailey's Court Number One, with protagonists ranging from the diabolical to the pathetic. There is humour . . . but this is ultimately an affecting study of how the law gets it right - and wrong' Guardian Court Number One of the Old Bailey is the most famous court room in the world, and the venue of some of the most sensational human dramas ever to be played out in a criminal trial. The principal criminal court of England, historically reserved for the more serious and high-profile trials, Court Number One opened its doors in 1907 after the building of the 'new' Old Bailey. In the decades that followed it witnessed the trials of the most famous and infamous defendants of the twentieth century. It was here that the likes of Madame Fahmy, Lord Haw Haw, John Christie, Ruth Ellis, George Blake (and his unlikely jailbreakers, Michael Randle and Pat Pottle), Jeremy Thorpe and Ian Huntley were defined in history, alongside a wide assortment of other traitors, lovers, politicians, psychopaths, spies, con men and - of course - the innocent. Not only notorious for its murder trials, Court Number One recorded the changing face of modern British society, bearing witness to alternate attitudes to homosexuality, the death penalty, freedom of expression, insanity and the psychology of violence. Telling the stories of twelve of the most scandalous and celebrated cases across a radically shifting century, this book traces the evolving attitudes of Britain, the decline of a society built on deference and discretion, the tensions brought by a more

permissive society and the rise of trial by mass media. From the Sunday Times bestselling author of Jeremy Hutchinson's Case Histories, Court Number One is a mesmerising window onto the thrills, fears and foibles of the modern age.

This book considers whether coercive control (particularly non-physical forms of family violence) should be prohibited by the criminal law. Based on the premise that traditional understandings of family violence are severely limited, it considers whether the core of family violence is power-based controlling or coercive behavior: attempts by men to psychologically dominate their partners. Such behavior can cause significant psychological, physical and economic harms to victims and is increasingly recognized as a form of human rights abuse. The book considers the new offences that have been introduced in England and Wales (controlling or coercive behavior), Ireland (controlling behavior) and Scotland (domestic abuse). It invites consideration of three key questions: Do conventional criminal laws adequately regulate non-physical abuse? Is the criminal law an appropriate mechanism for responding to the coercive control of family members? And if a new and distinctive offence is warranted, what is the optimal form of that offence? This ground-breaking work is essential reading for researchers and practitioners interested in coercive control and the proper role of the criminal law as a mechanism for regulating family violence.

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality

(AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors;

assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.
