This book offers the tools teachers need to get started with a more thoughtful and compelling approach to teaching history, one that develops literacy and higher-order thinking skills, connects the past to students' lives today, and meets social studies 3C standards and most state standards (grades 6-12). The author provides over 90 primary sources organized into seven thematic units, each structured around an essential question from world history. As students analyze carefully excerpted documents—including speeches by queens and rebels, ancient artifacts, and social media posts—they build an understanding of how diverse historical figures have approached key issues. At the same time, students learn to participate in civic debates and develop their own views on what it means to be a 21st-century citizen of the world. Each unit connects to current events with dynamic classroom activities that make history come alive. In addition to the documents themselves, this teaching manual provides strategies to assess student learning; mini-lectures designed to introduce documents; activities and reproducibles to help students process, display, and integrate their learning; guidance to help teachers create their own units; guidelines for respectful student debate and discussion; and more. Book Features: A timely aid for secondary school teachers tasked with meeting standards and other state-level quality requirements. An approach that promotes student engagement and critical thinking to replace or augment a traditional textbook. Challenges to the "master narrative" of world history from figures like Queen Nzinga and Huda Sha'arawi, as well as traditionally recognized historical figures such as Pericles and Napoleon. Essential questions to help students explore seven of the most important recurring themes in world history. Role-plays and debates to promote interaction among students. Printable copies of the documents included in the book can be downloaded at tpress.com.

Backed by solid research, Writing Instruction That Works answers the following question: What is writing instruction today and what can it be tomorrow? This up-to-date, comprehensive book identifies areas of concern for the ways that writing is being taught in today's secondary schools. The authors offer far-reaching direction for improving writing instruction that assist both student literacy and subject learning. They provide many examples of successful writing practices in each of the four core academic subjects (English, mathematics, science, and social studies/history), along with guidance for meeting the Common Core standards. The text also includes sections on Technology and the Teaching of Writing and English Language Learners.

The Handbook of Epistemic Cognition brings together leading work from across disciplines, to provide a comprehensive overview of an increasingly important topic: how people acquire, understand, justify, change, and use knowledge in formal and informal contexts. Research into inquiry, understanding, and discovery within academic disciplines has progressed from general models of conceptual change to a focus upon the learning trajectories that lead to expert-like conceptualizations, skills, and performance. Outside of academic domains, issues of who and what to believe, and how to integrate multiple sources of information into coherent and useful knowledge, have arisen as primary challenges of the 21st century. In six sections, scholars write within and across fields to focus and advance the role of epistemic cognition in education. With special attention to how researchers across disciplines can communicate and collaborate more effectively, this book will be an invaluable resource for anyone interested in the future of knowledge and knowing. New technologies have radically transformed our relationship to information in general and to little bits of information in particular. The assessment of history learning, which for a century has valued those little bits as the centerpiece of its practice, now faces not only an unprecedented glut but a disconnect with what is valued in history education. More complex processes—historical thinking, historical consciousness or historical sense making—demand more complex assessments. At the same time, advances in scholarship on assessment open up new possibilities. For this volume, Kadriye Ercikan and Peter Seixas have assembled an international array of experts who have, collectively, moved the fields of history education and assessment forward. Their various approaches negotiate the sometimes-conflicting demands of theoretical sophistication, empirically demonstrated validity and practical efficiency. Key issues include articulating the cognitive goals of history education, the relationship between content and procedural knowledge, the impact of students' language literacy on history assessments, and methods of validation in both large scale and classroom assessments. *New Directions in Assessing Historical Thinking* is a critical, research-oriented resource that will advance the conceptualization, design and validation of the next generation of history assessments.

Much of the data available today is unstructured and text-heavy, making it challenging for analysts to apply their usual data wrangling and visualization tools. With this practical book, you'll explore text-mining techniques with tidytext, a package that authors Julia Silge and David Robinson developed using the tidy principles behind R packages like ggplot2 and dplyr. You'll learn how tidytext and other tidy tools in R can make text analysis easier and more effective. The authors demonstrate how treating text as data frames enables you to manipulate, summarize, and visualize characteristics of text. You'll also learn how to integrate natural language processing (NLP) into effective workflows. Practical code examples and data explorations will help you generate real insights from literature, news, and social media. Learn how to apply the tidy text format to NLP Use sentiment analysis to mine the emotional content of text Identify a document's most important terms with frequency measurements Explore relationships and connections between words with the ggplot2 and wordcloud packages Convert back and forth between R's tidy and non-tidy text formats Use topic modeling to classify document collections into natural groups Examine case studies that compare Twitter archives, dig into NASA metadata, and analyze thousands of Usenet messages

The idea of "The Green Book" is to give the Motorist and Tourist a Guide not only of the Hotels and Tourist Homes in all of the large cities, but other classifications that will be found useful wherever he may be. Also facts and information that the Negro Motorist can use and depend upon. There are thousands of places that the public doesn't know about and aren't listed. Perhaps you know of some? If so send in their names and addresses and the kind of business, so that we might pass it along to the rest of your fellow Motorists. You will find it handy on your travels, whether at home or in some other state, and is up to date. Each year we are compiling new lists as some of these places move, or go out of business and new business places are started giving added employment to members of our race.

Effective science teaching requires creativity, imagination, and innovation. In light of concerns about American science literacy, scientists and educators have struggled to teach this discipline more effectively. Science Teaching Reconsidered provides undergraduate science educators with a path to understanding students, accommodating their individual differences, and helping them grasp the methods--and the wonder--of science. What impact does teaching style have? How do I plan a course curriculum? How do I make lectures, classes, and laboratories more effective? How can I tell what students are thinking? Why don't they understand? This handbook provides productive approaches to these and other questions. Written by scientists who are also educators, the handbook offers suggestions for having a greater impact in the classroom and provides resources for further research.

"It has been thought desirable that such papers of Margaret Fuller Ossoli as pertained to the condition, sphere and duties of

Woman, should be collected and published together. The present volume contains not only her "Woman in the Nineteenth Century"--Which has been before published, but for some years out of print, and inaccessible to readers who have sought it--but also several other papers, which have appeared at various times in the New York Tribune and elsewhere, and yet more which have never till now been published. My free access to her private manuscripts has given to me many papers, relating to Woman, never intended for publication, which yet seem needful to this volume, in order to present a complete and harmonious view of her thoughts on this important theme"--Préface

The integration of technology into modern classrooms has enhanced learning opportunities for students. With increased access to educational content, students gain a better understanding of the concepts being taught. *Flipped Instruction: Breakthroughs in Research and Practice* is a comprehensive reference source for the latest scholarly perspectives on promoting flipped learning strategies, tools, and theories in classroom environments. Featuring a range of extensive coverage across innovative topics, such as student engagement, educational technologies, and online learning environments, this is an essential publication for educators, professionals, researchers, academics, and upper-level students interested in emerging developments in classroom and instructional design.

Enthusiasm about the instructional potential of primary sources dates to the late 19th century and has been echoed recently in the work of literacy experts, historians, and educational psychologists. Yet, no extended intervention study has been undertaken to test the effectiveness of primary source instruction in real history classrooms. This study, with 236 eleventh-grade students in five San Francisco high schools, represented the first large-scale extended curriculum intervention in disciplinary reading in an urban district. The Reading Like a Historian (RLH) curriculum constituted a radical departure from traditional textbook-driven instruction by using a new activity structure, the "Document-Based Lesson," in which students used background knowledge and disciplinary reading strategies to interrogate, and then reconcile, historical accounts from multiple texts. A quasi-experiment control design measured the effects of a six-month intervention on four dimensions: 1) students' historical thinking; 2) their ability to transfer historical thinking strategies to contemporary issues; 3) their mastery of factual knowledge; and 4) their growth in general reading comprehension. MANCOVA analysis yielded significant main effects for the treatment condition on all four outcome-measures.

Qualitative analyses of videotaped classroom lessons were conducted to determine the frequency and nature of whole-class text-based discussion. Only nine whole-class text-based discussions were identified in over 100 videotaped classroom lessons, despite the presence of instructional materials explicitly designed to support student discussion of debatable historical questions. Analysis of teacher and student participation suggests a relationship between active teacher facilitation that reviews background knowledge and poses direct questions about texts and higher levels of student argumentation. This dissertation is structured as three free-standing papers, each of which addresses one aspect of the larger study. In the first paper, I discuss the design of the quasi-experimental study and report quantitative findings. In the second paper, I locate teacher facilitation of whole-class historical discussion in the literature on classroom discourse, and I propose a developmental framework for analyzing student historical argumentation in classroom discussion. In the third and final paper, I discuss the theoretical underpinnings of the intervention curriculum and offer two examples to illustrate the structure of the "Document-Based Lesson."

The use of primary sources as texts in the classroom is growing. Teachers realize these vital witnesses provide opportunities to motivate students and improve learning. They bring students closer to the people, places, and events being studied and help students improve content knowledge while building skills. Recent trends in standards, such as Common Core, and the increasing use of the Document-Based Questions also promote primary source use. The strong push to use primary sources in teaching history and social studies creates a need among teachers for more information on what they are and how they can be used effectively in the classroom. *Vital Witnesses* meets this need by providing teachers with a comprehensive guide to primary sources and their use in the classroom. Primary sources are defined, and the various types are described. Classroom-tested activities and strategies are offered to teachers for addressing the needs of all learners and for accommodating Common Core standards and the C3 Framework for State Social Studies Standards.
