The epic story of how one man shaped events, people, and himself to forever change a country. President Theodore Roosevelt forever transformed America, ushering the country into the arena of world supremacy. His brand of leadership is entirely American: confident, compassionate, energetic, diverse, visionary. But Roosevelt was not a born leader; his ascent to the apex of power was not a foregone conclusion. He made himself a leader of consequence and it is his epic journey to the White House—a road filled with terrific failures, intimate introspection, and self-made luck—will inspire readers anew. While a graduate student at Harvard, author Jon Knokey, a Roosevelt historian and business leader, unearthed hundreds of unpublished letters and interview notes from Roosevelt contemporaries. These long-forgotten documents provide a fresh and stunning ringside seat along the 26th President's journey to 1600 Pennsylvania Avenue. The stories from Harvard chaps, idealistic political reformers, coarse cowboys from the Badlands, and rough and tumble Rough Riders from the nation's interior, all combine to illuminate the maturation process of a man learning to lead at every stage of his life. Fast paced and written as a biographical narrative, Theodore Roosevelt and the Making of American Leadership places the reader alongside a young Theodore Roosevelt as he learns what he stands for and how he will lead. The twenty-third semi-annual Munk Debate, held on November 2, 2018, pits Stephen Bannon, the CEO of the Donald Trump presidential campaign, against columnist and author David Frum to debate the future of liberalism against the rising tide of populism. Throughout the Western world, politics is undergoing a sea-change. Long-held notions of the role of government, trade and economic policy, foreign policy, and immigration are being challenged by populist thinkers and movements. Does this surging populist agenda in Western nations signal a permanent shift in our politics? Or is it a passing phenomenon that will remain at the fringes of society and political power? Will our politics continue to be shaped by the post-war consensus on trade, inclusive national identity, and globalization, or by the agenda of insurgent populist politics, parties, and leaders? The twenty-third semi-annual Munk Debate pits former Donald Trump advisor Stephen K. Bannon against columnist and public intellectual David Frum to debate the future of the liberal political order.

Business Cycles in Economic Thought underlines how, over the time span of two centuries, economic thought interacted with cycles in a continuous renewal of theories and rethinking of policies, whilst economic actions embedded themselves into past economic thought. This book argues that studying crises and periods of growth in different European countries will help to understand how different national, political and cultural traditions influenced the complex interaction of economic cycles and economic theorizing. The editors of this great volume bring together expert contributors consisting of economists, historians of economic thought and historians of economics, to analyse crises and theories of the nineteenth and the twentieth century. This is alongside a comprehensive outlook on the most relevant advances of economic theory in France, Germany and Italy, as well as coverage of non-European countries, such as the United States. Several of the highly prestigious Villa Vigoni Trilateral Conferences formed the background for the discussions in this book. The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new "behavioral futures markets," where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new "means of behavioral modification." The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a "Big Other" operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled "hive" of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it.
