Geeky Pedagogy is a funny, evidence-based, multidisciplinary, pragmatic, highly readable guide to the process of learning and relearning how to be an effective college teacher. It is the first college teaching guide that encourages faculty to embrace their inner nerd, inviting readers to view themselves and their teaching work in light of contemporary discourse that celebrates increasingly diverse geek culture and explores stereotypes about super-smart introverts. Geeky Pedagogy avoids the excessive jargon, humorlessness, and endless proscriptions that plague much published advice about teaching. Neuhaus is aware of how embodied identity and employment status shape one's teaching context, and she eschews formulaic depictions of idealized exemplar teaching, instead inviting readers to join her in an engaging, critically reflective conversation about the vicissitudes of teaching and learning in higher education as a geek, introvert, or nerd. Written for the wonks and eggheads who want to translate their vast scholarly expertise into authentic student learning, Geeky Pedagogy is packed with practical advice and encouragement for increasing readers' pedagogical knowledge

Princeton Review Career Pathways is a system of organizing student learning interests and aptitudes around career fields. The model grew out of the federally funded National School-to-Work Opportunities Act (1994). Briefly, a career pathways high school starts with the career clusters, for students to align themselves with in high school. Depending on the school location and capacity, there are a variety of career clusters that are offered - engineering, health, science, art/design, writing, business, agriculture, etc. - and a curriculum is built around the individual pathway and career field - e.g. nurse - that the student chooses from within their career cluster. This is a student-oriented model of self-determination, in which students choose a curriculum area that matches their aptitudes and abilities. Core curriculum is still taught throughout each silo, so standardized testing is accommodated. Career pathways allow students to connect their learning from year to year, to practice their strengths and skills to prepare for transition to

college or work, to work as teams, etc. It does not require a high school to overhaul their system, but instead shows how high schools can integrate the pathways model to work within a school and make it a more connected learning environment.
