In the final days of 2019, a new and deadly virus was quietly spreading through the city of Wuhan, China. Within six months it would kill half a million people worldwide, infect a further 10 million, and change the way all of us live, work and play forever. Now, for the first time, the real story of the greatest global crisis of the age can be told. Reporters Dylan Howard and Dominic Utton, collaborating from New York and London—infection hotspots in what would become two of the worst-hit nations on Earth—have together mapped the rise, spread and impact of the virus . . . and uncovered some explosive revelations. COVID-19: The Greatest Cover-Up in History—From Wuhan to the White House delivers the unfettered truth about what is undoubtedly the biggest political scandal of our time. It shows in unprecedented detail how governments in China, the UK, and the US not only failed to protect their citizens from the threat of the disease, but actively conspired to put their own political and economic ideologies above the lives of ordinary people. From early attempts by Beijing to silence any reports of the new virus to the inability of the WHO to act decisively; from warnings received and ignored by President Trump to decisions taken by the UK government that directly led to the loss of tens of thousands of lives; from whispers of military experiments to outlandish 5G conspiracy theories, Howard and Utton separate fact from fiction, science from hysteria, and expose a trail of dead bodies, wilful mismanagement, incompetence, arrogance, deliberate cover-ups, and outrageous lies that raise serious questions about who is really responsible for the hundreds of thousands killed by COVID-19. Through vigorous investigations, dedicated reporting, and exclusive first-person sourcing, COVID-19 unearths a more complex understanding of the rise, spread, and consequences of the first six months of the pandemic than has yet been seen, and exposes shocking revelations about the roles and motivations of the American and British governments in the crisis. The true story of COVID-19 is not just that of a silent killer that suddenly invaded the world . . . it's the scandal of a global tragedy that could have—and should have—been prevented. The real number of deaths and infections from the virus will never be known. The figures have not only been underreported in China, but by supposedly transparent governments in the West for reasons less connected with public safety and more to do with their own mendacity, incompetence, and corruption. Written with the urgency and tension of a thriller novel but grounded in rigorously factual reporting, COVID-19 is the essential read on the most horrifying scandal of our age.

"This sobering description of many computer-related failures throughout our world deflates the hype and hubris of the industry. Peter Neumann analyzes the failure modes, recommends sequences for prevention and ends his unique book with some broadening reflections on the future." —Ralph Nader, Consumer Advocate This book is much more than a collection of computer mishaps; it is a serious, technically oriented book written by one of the world's leading experts on computer risks. The book summarizes many real events involving computer technologies and the people who depend on those technologies, with widely ranging causes and effects. It considers problems attributable to hardware, software, people, and natural causes. Examples include disasters (such as the Black Hawk helicopter and Iranian Airbus shootdowns, the Exxon Valdez, and various transportation accidents); malicious hacker attacks; outages of telephone systems and computer networks; financial losses; and many other strange happenstances (squirrels downing power grids, and April Fool's Day pranks). Computer-Related Risks addresses problems involving reliability, safety, security, privacy, and human well-being. It includes analyses of why these cases happened and discussions of what might be done to avoid recurrences of similar events. It is readable by technologists as well as by people merely interested in the uses and limits of technology. It is must reading for anyone with even a remote involvement with computers and communications—which today means almost everyone. Computer-Related Risks: Presents comprehensive coverage of many different types of risks Provides an essential system-oriented perspective Shows how technology can affect your life—whether you like it or not!

This book aims to identify geotourism and geoparks as gateways to socio-cultural, socio-environmental, and socio-economic sustainability in rural areas. At present, geotourism is a new movement helping travelers to increase their knowledge about natural resources, the cultural identities of host communities, and ways of preserving them. The 'emerging tourism' niche of geotourism is still at an early stage of commercial development in most countries, and geoparks as a sustainable development model for protected areas are pioneers in the development of geotourism marketing. The establishment of the European Geoparks Network and the Global Geoparks Network are positive steps toward the preservation and presentation of geo-heritage as a new tourist attraction. Geoparks and Geotourism provides an opportunity for students, professionals, and authorities of geoparks to take advantage of emerging techniques to create new products, facilities, services, technologies, and management practices for geoparks in the future. Consequently, the book is a paradigm for geoparks who want to come under the umbrella of the Global Geoparks Network. The numerous examples provided of geoparks currently attracting travelers may contribute to the creation of innovative strategies for sustainability and geoconservation in rural areas around the world.

INDIA 2019- A REFERENCE ANNUAL IS A COMPREHENSIVE DIGEST OF THE COUNTRY'S PROGRESS IN DIFFERENT FIELDS. THE BOOK DEALS WITH ALL ASPECTS OF DEVELOPMENT - FROM RURAL TO URBAN, INDUSTRY TO INFRASTRUCTURE, SCIENCE AND TECHNOLOGY TO ART AND CULTURE, ECONOMY, HEALTH, DEFENCE TO EDUCATION AND MASS COMMUNICATION.

Public Technology Procurement and Innovation studies public technology procurement as an instrument of innovation policy. In the past few years, public technology procurement has been a relatively neglected topic in the theoretical and research literature on the economics of innovation. Similarly, preoccupation with 'supply-side' measures has led policy-makers to avoid making very extensive use of this important 'demand-side' instrument. These trends have been especially pronounced in the European Union. There, as this book will argue, existing legislation governing public procurement presents obstacles to the use of public technology procurement as a means of stimulating and supporting technological innovation. Recently, however, there has been a gradual re-awakening of practical interest in such measures among policy-makers in the EU and elsewhere. For these and other related measures, this volume aims to contribute to a serious reconsideration of public technology procurement from the complementary standpoints of innovation theory and innovation policy.

Whether you are an executive or sales manager in a networking company, a data communications engineer, or a telecommunications professional, you must have a thorough working knowledge of the ever growing and interrelated array of telecom and data communications technologies. From protocols and operation of the Internet (IP, TCP, HTTP, ...) and its access systems such as ADSL, and GSM... to the basics of transmission and switching, this newly revised resource delivers an up-to-date introduction to a broad range of networking technologies, clearly explaining the networking essentials you need to know to be a successful networking professional. Moreover, the book explores the future developments in optical, wireless and digital broadcast communications.

This title presents twenty-nine topics, prepared by leading scholars in more than 20 countries, providing a comparative analysis of cutting-edge legal topics of the 21st century. Considering topics of vital moment to contemporary legal scholars, the title includes pieces on Surrogate Motherhood, The Balance of Copyright in Comparative Perspective, International Law in Domestic Systems, Constitutional Courts as "Positive Legislators," Same-sex Marriage, Climate Change and the Law, The Regulation of Private Equity, Hedge Funds, and State Funds, and Regulation of Corporate Tax Evasion. Each chapter surveys legal developments in the U.S. and Canada, Europe, Asia, Latin and South America, Africa, and the Middle East in a format that permits the reader easy access to similarities and differences in the approaches of the selected national regimes. This comprehensive volume tells the story of parallel trends in the evolution of legal doctrine despite jurisdictional, cultural, and political barriers. While each of the covered countries stands alone as a sovereign, in a technologically advanced world their disparate systems nonetheless have converged to adopt comparable strategies in dealing with complex legal issues. The volume is a critical addition to the library of

any scholar hoping to keep abreast of the major trends in contemporary law.

"This book addresses Internet marketing and the World Wide Web, and other electronic marketing tools such as geographic information systems, database marketing, and mobile advertising"--Provided by publisher.

This study traces the history and development of the International Co-operative Movement, from its foundation in 1895 to the present. It shows how the movement grew in different countries in response to industrialization, urbanization and the growth of market economies.

Scientists from management and strategy, information systems, engineering and telecommunications have discussed a novel concept: Smart Business Networks. They see the future as a developing web of people and organizations, bound together in a dynamic and unpredictable way, creating smart outcomes from quickly (re-)configuring links between actors. The question is: What should be done to make the outcomes of such a network 'smart', that is, just a little better than that of your competitor? More agile, with less pain, with more return to all the members of the network, now and over time? The technical answer is to create a 'business operating system' that should run business processes on different organisational platforms. Business processes would become portable: The end-to-end management of processes running across many different organizations in many different forms would become possible. This book presents you the outcomes of an energizing and new direction in management science.

So what is a member-owned business? What does it look like? How can we distinguish it from an investor-owned business? The crucial distinction is between a business that is people-centred, and one that is money-centred. This book explores the growing number of companies which use this model and their wider significance in society.

Switching, chalcogenide alloys are the core of rewriteable DVDs and of nonvolatile memories under development in several large semiconductor houses (Intel, BAE Systems, Samsung). They could also revolutionize reconfigurable electronics if appropriate alloys can be found to maximize the on/off dynamic range. This book brings together device and circuit engineers with physicists, chemists and materials scientists to identify outstanding, fundamental problems, to present technological trends, and to survey the fundamental understanding of these materials as they pertain to switching, including tailoring materials properties to applications. The volume is different from previous proceedings on amorphous semiconductors because of its relatively narrow scope in materials and its explicit focus on technological issues - processing, novel devices and reliability.

Monthly Budget Planner / Monthly Bill Planner and Organizer Full Functions of Management:Planning and Organizing Monthly Budget Planner / Weekly Expense Tracker/ Bill Organizer Notebook/ Personal Finance Journal The Monthly Bill Planner and Organizer provide a fantastic way to organize your bills and plan for your expenses. The journal comprises of neatly organized spaces for the week, month and year that you wish to plan your expenses and account for your bills. The Journal also has a Financial Goals sheet for you to itemize your goals so you can plan your expenses properly. ** Start from anytime, you can use it until next year. DETAILS: - Management your money,it perfect for business ,personal finance bookkeeping,budgeting - 145 pages of monthly budget planner and weekly expense tracker - Space for a full 12 months - 8.5"x11"

This is a Reference Annual, a yearbook carrying all the information of central government schemes, programmes and policies. Information of States and UTs is also included in the Reference Book.

Under a Memorandum of Understanding between Indonesia and Australia, traditional Indonesian fishermen are permitted access to fish in a designated area inside the 200 nautical mile Australian Fishing Zone (AFZ). However, crew and vessels are regularly apprehended for illegal fishing activity outside the permitted areas and, after prosecution in Australian courts, their boats and equipment are destroyed and the fishermen repatriated to Indonesia. This is an ethnographic study of one group of Indonesian maritime people who operate in the AFZ. It concerns Bajo people who originate from villages in the Tukang Besi Islands, Southeast Sulawesi. It explores the social, cultural, economic and historic conditions which underpin Bajo sailing and fishing voyages in the AFZ. It also examines issues concerning Australian maritime expansion and Australian government policies, treatment and understanding of Bajo fishing. The study considers the concept of "traditional" fishing regulating access to the MOU area based on use of unchanging technology, and consequences arising from adherence to such a view of "traditional"; the effect of Australian maritime expansion on Bajo fishing activity; the effectiveness of policy in providing for fishing rights and stopping illegal activity, and why Bajo continue to fish in the AFZ despite a range of ongoing restrictions on their activity.

"How can you argue with the core principles of Lean, that you focus on what provides value to your customer and eliminate work that is not necessary (muda)? Internal auditors need to understand not only who their primary customers are, but what is valuable to them - which in most cases is assurance that the risks that matter to the achievement of objectives are properly managed. We need to communicate what they need to know and not what we want to say. This incessant focus on the customer and the efficient production of a valued product should extend to every internal audit team. How else can we ensure that we optimize the use of our limited resources to address the dynamic business and risk environment within which our organizations operate?" Norman Marks, GRC Thought Leader Using lean techniques to enhance value add and reduce waste in internal auditing Lean Auditing is a practical guide to maximising value and efficiency in internal audit through the application of lean techniques. It is an ideal book for anyone interested in understanding what progressive, value adding audit can be like. It is also ideal for anyone wondering whether audit activities can be streamlined or better co-ordinated with other activities. The book contains practical advice from the author's experience as CAE of AstraZeneca PLC; from his work as a consultant specializing in this field; as well as insights from leading CAEs in the UK, US and elsewhere. In addition, there are important insights from thought leaders such as Richard Chambers (IIA US) and Norman Marks (GRC thought leader) and Chris Baker (Technical Manager of the IIA UK). Increasing pressure on resources is driving a need for greater efficiency in all areas of business, and Internal Audit is no exception. Lean techniques can help streamline the workflow, but having only recently been applied to IA, lack the guidance available for other techniques. Lean Auditing fills this need by combining expert instruction and actionable advice that helps Internal Auditors: Benchmark their efficiency against lean ways of working Understand warning signs of waste and lower added value Understanding practical ways of working that improve added value and reduce waste Gain confidence about progressive ways of working in internal audit Understand how improved ways of working in audit can positively impact the culture of the wider organization One of the keys to the lean audit is finding out exactly what the stakeholder wants, and eliminating everything else. Scaling back certain operations can delineate audit from advisory, and in the process, dramatically improve crucial outcomes. To this end, Lean Auditing is the key to IA efficiency.

Civil law provides a framework within which people conduct their daily lives, and civil court cases often relate to problems that affect people's basic life opportunities and well-being. This is the 2nd edition of this publication which sets out the key findings of surveys conducted in England and Wales in 2001 and 2004, the most extensive of its kind so far, undertaken to examine people's experiences of civil law problems, including exploring social, economic and health consequences. Issues discussed include: the links between the civil justice system, crime and social exclusion, the relatively infrequent use of formal legal processes, and the obstacles that can prevent problems being resolved.

Public Technology Procurement and Innovation Springer Science & Business Media

Thirty years after the entry into force of the Directive on liability for defective products (Council Directive 85/374/EEC), and in the light of the threat to user safety posed by consumer goods that make use of new technologies, it is essential to assess and determine whether the Directive remains an adequate legal response to the phenomenon of products brought to market that fail to ensure appropriate levels of safety for their users. European Product Liability is the result of an extensive international research project funded by the Polish National Science Centre. It brings together experienced scholars associated with the European Group on Tort Law (EGTL) and the European Research Group on Existing EC Private Law (Acquis Group). Individual country reports analyse the implementation of the Directive in the domestic law of several EU and EEA Member States (namely Austria, Czech Republic, Denmark, England, France, Germany, Italy, Netherlands, Norway, Poland, Spain, and Switzerland) and the relationship of the implemented rules with the already existing rules of tort law. The country reports show that the practical significance of product liability differs widely in the various Member States. Also taking into account non-EU countries (Canada, Israel, South Africa and the USA), this book examines whether EU law will ensure sufficient safety for individuals using goods that have been produced using new technologies that are currently under development, such as major advances in mechatronics, nanotechnology, regenerative medicine and contour crafting. Together with an economic analysis of product liability it makes the book valuable for academics, practitioners, policy makers and all those interested in the subject.

This book analyses elements of international finance, comparing the regulation of hedge funds in United States, Europe, the UK, and off-shore jurisdictions in the aftermath of the financial crisis. It critically compares the Dodd- Frank Act in US with the Alternative Investment Funds Managers Directive in Europe. Moreover, it goes further by analyzing the implementation of the AIFM Directive in seven jurisdictions in Europe famous for the incorporation of hedge funds: the United Kingdom, Italy, France, Ireland, Malta, Luxembourg, and Switzerland. The book also analyses the effect of Brexit on the legislation in the UK regarding the application of the directive and the distribution of financial products in Continental Europe, and will be of particular interest to researchers, academics, and students of international finance and financial regulation.

'The Network Society stimulates the reader to think about the network society in an innovative way. Because of its analytical aims and a well-balanced presentation of empirical findings and theoretical insights coming from a remarkable variety of authors, this is a book that might become a model for collaborative research in the years to come, as well as an invaluable reference for teaching and research on networking as an organizational form.' - International Sociology - Review of Books

Groups committing acts of terrorism have adapted their means of financing to elude detection since the 9/11 attacks in the United States. Surveying the global community's multi-year effort to cut off terrorist funding, this volume offers a much-needed analysis of a complex, widely discussed, yet poorly understood subject. While books on terrorism have touched upon the topic, this is the first comprehensive, balanced, and scholarly overview of terrorist financing, its methods, and efforts to counter it. Bringing together leading analysts of terrorism, international relations, global finance, law, and criminology, Countering the Financing of Terrorism provides a critical assessment of the international effort to restrict terrorist financing. It evaluates the costs and benefits and offers recommendations for more effective policies for the future.

The definitive concise reference for networking professionals and students.

The PIC microcontroller from Microchip is one of the most widely used 8-bit microcontrollers in the world. In this book, the authors use a step-by-step and systematic approach to show the programming of the PIC18 chip. Examples in both Assembly language and C show how to program many of the PIC18 features such as timers, serial communication, ADC, and SPI.

The purpose of this handbook is to raise the awareness level of tax examiners and auditors on money laundering. It provides guidance in identifying money laundering during the conduct of normal tax audits. It also describes the resources and tools ...

Nobody's perfect. Nevertheless, public confidence in the legal justice system depends on the belief that decisions made in judicial processes are reasonably correct and accurate. Since no one has a monopoly on ultimate correctness, a large part of trust in the correct and objective nature of outcomes of the judicial process is rooted in the trust in the mechanisms of quality control. However, the specific nature of the judicial process, encapsulated in the principle of judicial independence, as well as in the right to fair and swift adjudication, requires specific control mechanisms that have to achieve a sensitive balance between various aims and goals. Based on these observations, this collection of essays

focuses on the systems of appellate control of court judgments. The book explores the relationship between the different approaches to appeals in national civil justice systems, along with their impact on the overall efficiency and effectiveness of the legal protection of individual rights. Recognizing that any approach to appeal has to strike a balance - between the ideals of correctness, legitimacy, and impeccable legal reasoning, on the one hand, and the ideals of legal certainty, effectiveness, and efficiency, on the other - the book's contributors were invited to discuss how contemporary justice systems deal with this issue. This allows an evaluation of whether the issues in debate are rather disparate or whether, on the contrary, the procedural philosophies and approaches to appeal in different legal systems are converging. (Series: *Ius Commune Europaeum* - Vol. 129)

Education is the key to America's economic growth and prosperity and to our ability to compete in the global economy. It is the path to higher earning power for Americans and is necessary for our democracy to work. It fosters the cross-border, cross-cultural collaboration required to solve the most challenging problems of our time. The National Education Technology Plan 2010 calls for revolutionary transformation. Specifically, we must embrace innovation and technology which is at the core of virtually every aspect of our daily lives and work. This book explores the National Education Technology Plan which presents a model of learning powered by technology, with goals and recommendations in five essential areas: learning, assessment, teaching, infrastructure and productivity.

A book series devoted to the common foundations of the European legal systems. The *Ius Commune Europaeum* series includes comparative legal studies as well as studies on the effect of treaties within national legal systems. All areas of the law are covered. The books are published in various European languages under the auspices of METRO, the Institute for Transnational Legal Research at Maastricht University. Enforcement of court judgments and other enforceable documents was until about a decade ago a relatively neglected subject, both as a topic of systematic and comparative legal research, and as an area for harmonization at the regional and international level. This situation has changed somewhat in the first years of the third millennium, which may be attributed to the encounter with massive inefficiencies of the mechanisms of legal protection in a number of European countries. The ambition of this book is to contribute to the efforts devoted to the comparative study and research in the area of enforcement. The book aims at supplying a number of perspectives on the development of enforcement practices and structures, mainly in Europe. The articles are written by experts from legal academia and professionals involved in enforcement practice. New trends are highlighted by pointing to the contrasts of static, slowly changing traditional perspective and the dynamic trends of reforms that may be observed throughout the various jurisdictions under discussion.

This book provides new internal auditors with step by step guide in performing risk based internal auditing. Summarised in 5 easy-to-follow simple steps, the author shares his experience in performing an effective and comprehensive internal audit exercise. Methodology and complex techniques are available. Not to deny that all these available information is good, but it would be too complicated for internal audit beginners to understand and to apply those information immediately into a guide in their first task. Therefore, this book has been written to provide a simple yet comprehensive guides with examples that can be immediately applied!
