Negotiation is stuck—it's time for something new. Almost everything is negotiable, almost every interaction a negotiation. And in no field is this clearer than in business, where every day we need to work with others to get things done. But when we have real differences, is a win-win always possible? Or must every negotiation be a zero-sum game, with a winner and a loser? Over the last half century, these two opposing philosophies have ruled the field: the win-lose, tooth-and-nail battle plan identified with training guru Chester Karrass, and the win-win, "principled" creed of Getting to Yes, by Harvard's Roger Fisher and William Ury. Both were game changers in their day, but neither approach fully meets the challenges of today's volatile, disruptive, ultracompetitive business environment, where strategic problem-solving is a crucial skill, and time is of the essence. In Creative Conflict, negotiation experts Bill Sanders and Frank Mobus provide something new. They use a dynamic, dialectical approach to show that negotiations are driven by competition and cooperation at the same time, counterintuitively revealing that conflict is at the core of every negotiation. When we tiptoe around conflict, we negotiate in a half-hearted way that limits our results. Creative negotiators probe and push until they hit a wall of disagreement, then figure out how to get past it. The authors construct a simple framework based on three basic but distinct contexts: bargaining, dealmaking, and relationship building. They then instruct readers on how to skillfully pursue their own interests while simultaneously seeking ways to expand a deal's scope and value for both sides. Based on the popular Mobus Creative Negotiating seminars and the authors' experience working with Fortune 500 companies, Creative Conflict is a business book written for businesspeople, by businesspeople. It's your go-to

guide for boosting your skills and confidence as a negotiator—and learning to strike a better deal.

At the heart of many fields - physics, chemistry, engineering - lays thermodynamics. While this science plays a critical role in determining the boundary between what is and is not possible in the natural world, it occurs to many as an indecipherable black box, thus making the subject a challenge to learn. Two obstacles contribute to this situation, the first being the disconnect between the fundamental theories and the underlying physics and the second being the confusing concepts and terminologies involved with the theories. While one needn't confront either of these two obstacles to successfully use thermodynamics to solve real problems, overcoming both provides access to a greater intuitive sense of the problems and more confidence, more strength, and more creativity in solving them. This book offers an original perspective on thermodynamic science and history based on the three approaches of a practicing engineer, academician, and historian. The book synthesises and gathers into one accessible volume a strategic range of foundational topics involving the atomic theory, energy, entropy, and the laws of thermodynamics.

Experts report on the latest research on extending access to financial services to the 2.5 billion adults around the world who lack it. About 2.5 billion adults, just over half the world's adult population, lack bank accounts. If we are to realize the goal of extending banking and other financial services to this vast "unbanked" population, we need to consider not only such product innovations as microfinance and mobile banking but also issues of data accuracy, impact assessment, risk mitigation, technology adaptation, financial literacy, and local context. In Banking the World, experts take up these topics, reporting on new research that will guide both policy makers and scholars in a broader push to extend financial markets. The contributors consider such topics as the complexity of surveying people about their use of financial services; evidence of the impact of financial services on income; the occasional negative effects of financial services on poor households, including disincentives to work and overindebtedness; and tools for improving access such as nontraditional credit scores, financial incentives for banking, and identification technologies that can dramatically reduce loan default rates.
