

Guided Practice Activities

Perspectives on Transitions in Schooling and Instructional Practice examines student transitions between major levels of schooling, teacher transitions in instructional practice, and the intersection of these two significant themes in education research. Twenty-six leading international experts offer meaningful insights on current pedagogical practices, obstacles to effective transitions, and proven strategies for stakeholders involved in supporting students in transition. The book is divided into four sections, representing the four main transitions in formal schooling: Early Years (Home, Pre-school, and Kindergarten) to Early Elementary (Grades 1–3); Early Elementary to Late Elementary (Grades 4–8); Late Elementary to Secondary (Grades 9–12); and Secondary to Post-Secondary (College and University). A coda draws together over-arching themes from throughout the text to provide recommendations and a visual model that captures their interactions. Combining theoretical approaches with practical examples of school-based initiatives, this book will appeal to those involved in supporting either the student experience (both academically and emotionally) or teacher professional learning and growth.

The study compared the effectiveness of the guided practice method and the independent practice method of teaching electronic spreadsheet applications. Two intact sections of computer software applications classes at the collegiate level were studied. Both sections were taught by the same teacher. A computer-generated spreadsheet skills test was used to determine the skill level and the amount of transfer of learning from a familiar to an unfamiliar program. No statistically significant differences were found between the guided practice and the independent practice methods of teaching electronic spreadsheet applications relative to content knowledge achievement and students' perceptions of the course. A significant difference was found in relation to the skill level achieved by students in favor of the guided practice method of instruction. However, independent practice learning activities were found to be significantly different in relation to the amount of transfer students exhibited from a familiar electronic spreadsheet to an unfamiliar one. Conclusions were (a) both independent practice learning activities and guided practice learning activities produced similar student performance results relative to content knowledge of electronic spreadsheets, (b) guided practice learning activities are more effective than independent practice learning activities when teaching electronic spreadsheet skills, (c) independent practice learning activities are more effective when teaching electronic spreadsheet skills to transfer to an unfamiliar electronic spreadsheet program, and (d) both independent practice learning activities and guided practice learning activities produced similar student ratings relative to students' perceptions of the course.
