Tinsley Harrison -- doctor, teacher, researcher, medical school leader -- is one of the most important medical figures of the 20th century. He edited the first five editions of Harrison's Principles of Internal Medicine, regarded as a quintessential medical text and perhaps the best-selling medical textbook of all time. He traveled the world in his capacity as a teaching doctor, made significant contributions to scholarship, and served as the dean/medical chairman at four medical schools. He is a titan of the field, an enormous presence central to the narrative of American medicine. Author Dr. James Pittman knew Harrison well, studying and teaching with him from the 1950s until Harrison's death. Pittman spent six years interviewing Harrison near the end of Harrison's life, and these lengthy interviews, as well as interviews with his colleagues, family and friends, form the bulk of the scholarship of this compulsively readable book. Pittman brings his own medical knowledge to the fore, as well as his personal friendship with the subject, in this beautifully written character study of one of science's great but not well-

known men. Harrison lived a long, exciting life, and in these pages, readers will get a glimpse of the historical forces that shaped and in turn were shaped by this legendary doctor. "Harrison's is intended for learners throughout their careers. For students, Part 1, Chapter 1 begins with an overview of "The Practice of Medicine". In this introductory chapter, the editors continue the tradition of orienting clinicians to the

science and the art of medicine, emphasizing the values of our profession while incorporating new advances in technology, science, and clinical care. Part 2, "Cardinal Manifestations and Presentation of Diseases" is a signature feature of Harrison's. These chapters eloquently describe how patients present with common clinical conditions, such as headache, fever, cough, palpitations, or anemia, and provide an overview of typical symptoms, physical findings, and differential diagnosis. Mastery of these topics prepares students for subsequent chapters on specific diseases they will encounter in courses on pathophysiology and in clinical clerkships"--
