This book describes fluorocarbons gases' preparation process, properties, applications and their evolution over time. The impact of fluorocarbons on the ozone layer and global and the development to mitigate those effects have been specially emphasized. The first major industrial fluorinated compound was developed in the 1920's, to replace ammonia and sulfur dioxide refrigerants, at the General Motors Frigidaire Division by Thomas Midgley, Jr. and Albert Leon Henne. They developed a family of fluorocarbons trademarked Freon® for auto air conditioning units revolutionizing the auto industry. Other applications were developed over time including fire extinguishers, propellants, blowing agents, cleaners, anesthesia, artificial blood and others impacting every facet of life. In spite of being in broad global use for nearly a century, fluorocarbon gases have gone through great evolution during the last few decades. In the 1980s it was discovered chlorofluorocarbon (CFC) gases are harmful to the ozone layer, mainly because of their chlorine content. Chlorine was released in the upper atmosphere when chlorofluorocarbon molecules were broken down by the high energy cosmic radiation. CFCs were progressively banned following the Montreal Protocol of 1987. CFCs were replaced by fluorinated gases containing either less chlorine (hydrofluoro-chlorocarbons, or HCFCs), which are much less damaging (about 90% less) to the ozone layer or with fluorinated gases containing no chlorine, i.e. hydrofluorocarbons or HFCs. HFC have no impact on the ozone layer but impact global warming detrimentally. HFCs are usable without need for changes to the existing refrigeration or air conditioning installations. More recently hydrofluoroolefins (HFOs), which have little or no negative impact on global warming, have been developed to replace or reduce the use of HFCs. HFOs are used as single compounds or in blends. Research and development continues to develop and replace the HCFCs and HFCs completely with environmentally friendly products. Concise Handbook of Fluorocarbon Gases presents a reference and text for the commercial fluorocarbon gases which have great many application in a wide range of industries such as refrigeration and air conditioning, as well as consumer products.

Like the citizens of every recorded society, we have turned to incense, potpourri and pomanders to add to the quality of space we inhabit. Even today, people travel many kilometres just to sit and walk in a beautiful garden - just as they did in the days of the Gardens of Babylon. And why? Because it is instinct that the very essence of nature is a healer to our spirit and to our soul. Of course our bodies respond to aromas! We don't need science to tell us that. Go sit in a beautiful garden and breathe in the brilliant blend of aromas, and you will notice an uplifting of your mood and spirit. It is true, however, that some people respond more acutely and readily to aromas than others. This is not really unusual when you consider how magnificently developed the sense of smell becomes in a blind person. As the Royal Blind Society will tell you, you can develop your senses far and beyond the average person when you have to, or when you just simply want to. When a woman or a man arrives at that stage of their life when they become more aware of their senses, of nature and the world around them, we believe it marks a very important point in their development. Scentual Awareness is the term we use to describe this growing appreciation of aromas and fragrances, and the sense of smell - hence the title of this book. We believe our book can open the way to a whole new world for you. It will give you insight into a new approach to nature through one of its most powerful tools - those fragrant essential oils drawn from flowers and grasses, trees and roots, leaves and fruit. These remain the great untapped resources of our planet. Our book, Aromatherapy for Scentual Awareness shows how each essential oil can offer many diverse benefits. One of the most holistic of all systems of medicine, you will see for yourself how the oils can alleviate symptoms, prevent many illnesses and disorders, influence our moods or create special environments in our homes, offices or wherever we may spend our days - all without the chemical pollution of our bodies or our environment. In writing this book, we have drawn largely on our own experiences in day-to-day life, in the visible improvements to our appearance and the general state of our health and wellbeing. We have also drawn on feedback from friends and relatives, but most importantly from the thousands of people we have come in contact with through our work as aromatherapists, including many who have come to our workshops and demonstrations. They have all had stories to tell.

This book is NOT on how to cure anything. In Chiropractic college the first thing we learned is that you can only cure 2 things: Ham and Bacon. I am not a cancer expert, not an oncologist and not even a medical doctor. So why should you buy this book Because I am not any of those things. My approach is to look at how to help maintain normal function of the tissues that are being attacked, with other issues such as nausea and dry mouth from a natural point of view, as well as a well rounded approach to helping to stay healthy with diet, prayer, cleanses and detoxification. There are also helps to use during chemotherapy including nausea, hair loss and chemo fog. I am not ANTI-meds. What I am offering are some natural alternatives that you can use AT THE same time if you chose to do chemo or other traditional approaches.
