Drawing on macro-historical sociological theories, this book traces the development of intellectual property as a new type of legal property in the modern nation-state system. In its current form, intellectual property is considered part of an infrastructure of state power that incentivizes innovation, creativity, and scientific development, all engines of economic growth. To show how this infrastructure of power emerged, Laura Ford follows macro-historical social theorists, including Michael Mann and Max Weber, back to antiquity, revealing that legal instruments very similar to modern intellectual property have existed for a long time and have also been deployed for similar purposes. Using

comparative and historical evidence, this groundbreaking work reflects on the role of intellectual property in our contemporary political communities and societies; on the close relationship between law and religion; and on the extent to which law's obliging force depends on ancient, written traditions.

This is a critical first resource for information on DataCLX, the programming interface for dbExpress. DbExpress will be the database engine for all Delphi developers, replacing Borland's 10-year-old DBE technology. Includes copious examples and a complete, real-world sample application from which readers can adopt usable code. Geared toward the advanced Delphi programmer, this book covers how to build a personalized screen saver, create a script-driven installation utility, upgrade the Windows 16 workplace shells, and handle image file conversions; how to bring an application up to speed with X, Y and Z modem protocols; and how to send programs into cyberspace via the Winsock API.

In a series of tasks, you will be exposed to techniques and best practices that make the use of Aurelius easy and efficient. Furthermore, you'll refine your analytical skills to sharpen your understanding of Delphi (Pascal), helping you write better code along the way. Introducing Delphi ORM explains that while database design is difficult, database programming (i.e., manipulating, extracting, filtering, and manipulating data) is even more difficult. ORM frameworks provide a simpler way for you to access and manage data in databases. You'll see how they offer different levels of abstraction and tools to code data access in a database-agnostic way by introducing a layer between the application and the data access language (SQL, LINQ, and so on). By the end of the book, you will be confident in using a wide range of Aurelius features to allow you to get started with databases in a very short space of time. What You Will Learn Gain the

in academic libraries, having a tool that provides so much comparative data on service quality, efficiency, and effectiveness is crucial for librarians in search of solutions to an array of ILL/DD problems. Interlibrary Loan/Document Delivery and Customer Satisfaction is a valuable resource for academic librarians, public and special librarians struggling with ILL/DD issues, DD providers (commercial or otherwise), and students in the field of library and information studies. Readers become immersed in the issues as this book: describes the development of local software to reduce the tedious tasks involved in request fulfillment, freeing office personnel to tackle more difficult requests analyzes how important delivery speed is to academic ILL/DD requestors and suggests when investing additional resources in improving delivery speed may be a waste of money provides comparative data on how many requests can be processed by the typical ILL office staff member debunks some long-held assumptions about delivery speed sets guidelines for efficiency and effectiveness proposes two strategies for redesigning ILL services to incorporate new developments in technology and innovative approaches toward long-standing, traditional services Interlibrary Loan/Document Delivery and Customer Satisfaction is useful not only to administrators interested in redesigning ILL and DD, but also to other libraries interested in comparing the speed and effectiveness of their service with some positively evaluated services provided by high-volume libraries. The software review helps providers implement the best choice of software for their offices and provides in-depth discussions about the strategies needed to further develop one's own software to reduce workload. At a time when the tenets of Total Quality Management and customer satisfaction are the focus of many managers, interlibrary loan and document delivery are transforming from peripheral services to primary services in the academic library.
