Dafür, dass Apple angekündigt hat, mit neuen Features mal zu pausieren, waren die Entwickler doch wieder ganz schön fleißig – es gibt kaum eine Funktion in Mac OS X 10.6, dem "Snow Leopard", die sie nicht angefasst haben. Schneller, glatter, besser ist das neue System... aber immer noch ohne beschreibendes Handbuch. Zum Glück hat sich Dompteur David Pogue wieder daran gemacht, die Raubkatze auf Herz und Nieren zu prüfen und zu zähmen. Mit Witz und Humor, aber auch der gebührenden kritischen Distanz schildert er, was wie geht - und was nicht. Die wichtigsten Neuerungen: Eine 64-Bit-Generalüberholung. Geschwindigkeit. Ein neu geschriebener Finder. Kompatibilität mit Microsoft Exchange. Ein nagelneuer QuickTime-Player. Wenn Apple sich darum kümmert, dann auch dieses Buch. Snow Leopard-Flecken: Auch die Hunderte von kleineren Verbesserungen in den 50 Programmen, die beim Mac dabei sind, werden hier enthüllt. In Safari, Mail, iChat, der Vorschau, Time Machine... Tastenkürzel und Geheimgänge: Dieses Mac-Buch ist bestimmt das trickreichste und überraschendste, das je geschrieben wurde. Auf jeder Seite erwarten Sie undokumentierte Abkürzungen und unbekannte Kniffe. Der Turbolader: Sicherheit, Netzwerkthemen, Zusammenarbeit mit Windows-Rechnern in heterogenen Umgebungen, sogar der Unix-Unterbau von Mac OS X - dieses geistreiche Handbuch leuchtet alles bis in den letzten Winkel aus.

Dealing with information is one of the vital skills in the 21st century. It takes a fair degree of information savvy to create, represent and supply information as well as to search for and retrieve relevant knowledge. How does information (documents, pieces of knowledge) have to be organized in order to be retrievable? What role does metadata play? What are search engines on the Web, or in corporate intranets, and how do they work? How must one deal with natural language processing and tools of knowledge organization, such as thesauri, classification systems, and ontologies? How useful is social tagging? How valuable are intellectually created abstracts and automatically prepared extracts? Which empirical methods allow for user research and which for the evaluation of information systems? This Handbook is a basic work of information science, providing a comprehensive overview of the current state of information retrieval and knowledge representation. It addresses readers from all professions and scientific disciplines, but particularly scholars, practitioners and students of Information Science, Library Science, Computer Science, Information Management, and Knowledge Management. This Handbook is a suitable reference work for Public and Academic Libraries.
