Essay from the year 2017 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: A, University of Aberdeen, language: English, abstract: This essay focuses on the investment banking division of Deutsche Bank as a case study, whereby two of HBR's highly esteemed models for change management are applied to the real-world banking scenario. With the appearance of fintech companies and startups, the investment banking sectors of all major banks face significant change. In order to cope with this challenge, the urgent need is to implement new and innovative change initiatives by the respective bank. The following initiative deals with the real live case study of a change initiative planned for the investment banking division of Deutsche Bank. The change programme is based on Kotter's eight steps model to transforming an organisation as well as Beer and Nohria's theory that focusses on cracking the code of change. Both approaches are aiming to find a suitable solution towards the urgent need of implementing change in the given business sector. As technology and artificial intelligence is on the rise in an already developed 'new economy' a major change within the banking sector has already begun. One has to realise that the upcoming technological achievements, especially sophisticated algorithms for trading programs, might unlock the potential to overthrow the whole banking industry. Therefore, Deutsche Bank has to be prepared for the changes to come and the disturbing challenges those changes potentially bring for the employees of affected divisions. The task field of investment banking recently faced new ideas like 'crowdfunding' and 'marketing automation' to appear on the market and became dangerous competitors whose impact cannot yet be fully assessed. This means that Deutsche Bank has to dramatically overhaul its investment banking business while implementing a number of change initiatives to stay competitive in a global environment that is characterised as volatile, uncertain, complex, and ambiguous. In such a world, steady and drastic change is seen as a normality in which every person and especially industries are under the pressure to adapt in order to succeed. In order to implement change most efficiently at Deutsche Bank's investment banking division, the two selected change management frameworks and theories help to understand the circumstances in which the whole process is imbedded.

Part of the Bizle Professional Series, this is a complete guide to the software used in the Investment Banking industry. It also covers topics such as: overview of the Investment Banking technology marketplace; types of IT systems developed by the various application vendors; and, underlying technology used for developing these applications.

This book is intended to lay out, in a clear and intuitive as well as comprehensive way, what we know - or think we know - about mergers and acquisitions in the financial services sector. It evaluates their underlying drivers, factual evidence as to whether or not the basic economic concepts and strategic precepts are correct. It looks closely at the managerial dimensions in terms of the efficacy of merger implementation, notably the merger integration process. The focus is on enhancing shareholder value creation and the execution of strategies for the successful management of mergers. It also has a strong public-policy component in this "special" industry where successes can pay dividends and failures can cause serious problems that reach well beyond the financial services industry itself. The financial services sector is about halfway through one of the most dramatic periods of restructuring ever undergone by a major global industry. The impact of the restructuring has carried well beyond shareholders of the firms and involved into the domain of regulation and public policy as well as global competitive performance and economic growth. Financial services are a center of gravity of economic restructuring activity. M&A transactions in the financial sector comprise a surprisingly large share of the value of merger activity worldwide -- including only deals valued in excess of \$100 million, during the period 1985-2000 there were approximately 233,700 M&A transactions worldwide in all industries, for a total volume of \$15.8 trillion. Of this total, there were 166,200 mergers in the financial services industry (49.7%), valued at \$8.5 trillion (54%). In all of restructuring frenzy, the financial sector has probably had far more than its share of strategic transactions that have failed or performed far below potential because of mistakes in basic strategy or mistakes in post-merger integration. It has also had its share of rousing successes. This book considers the key managerial issues, focusing on M&A transactions as a key tool of business strategy - "doing the right thing" to augment shareholder value. But in addition, the degree of integration required and the historic development of integration capabilities on the part of the acquiring firm, disruptions in human resources and firm leadership, cultural issues, timeliness of decision-making and interface management have co-equal importance - "doing it right."

WHAT READERS ARE SAYING: "I wish that this book had existed when I was applying for positions back in college. I was a economics major with almost no real job experience, and it must have shown in my interviews. I got lucky because UBS was willing to take a chance on me as a summer intern, which led me to get where I am now. If I could do it again, though, I would take the much easier route and read this book. It would have prepared me for the parts of the job I never imagined." - First Year Analyst At Citigroup "Applying for my summer internship was a rough experience- I was afraid that I would never get the chance to show my skill in investment research to big companies because I would be rejected before I ever made it to the internship stage. Fortunately for me, this book helped me prepare and build my interview skills to the point where I felt that I had not just a fair shot at the job but an unfair advantage over the other candidates. It's a must read." - Current Intern At Goldman Sachs
