Baking is the most difficult aspect of the gluten-free diet to overcome, but using clever substitutes and ingenious baking methods, experienced baker Hannah Miles has created a delicious selection of gluten-free versions of everyone's favourites. Cookies, Brownies & Bars include Ginger Cookies, Caramel Shortbreads and White Chocolate and Walnut Brownies. A chapter devoted to Cakes provides inspiration for birthdays and other special occasions - try Apple and Pecan Cake; Caramelized Lemon Polenta Cake or Carrot and Coconut Cake. Small Bakes for every day include Buttermilk Scones and Apricot Cornmeal Muffins. Fantastic Breads to try are Perfect Pizza Dough, Bagels and Sunshine Cornbread. Pastry treats to try include Chocolate Profiteroles, Blackcurrant and Blueberry Millefeuille and Nectarine and Cream Choux Rings. Finally, Desserts include Plum and Amaretto Crumble and Toffee Apple Cheesecake. This book is a must for the gluten intolerant or for those who bake for gluten-intolerant family members or friends. Lawyer and 2007 MasterChef finalist, Hannah Miles has developed a second career as a cake maker and food writer.

Contending that the music is not a knowable entity but a spectrum of dynamic practices that elude definition, Alexandra T. Vazquez models a new way of writing about music and the meanings assigned to it.

Weighing as much as 2,000 pounds and reaching lengths of over seven feet, leatherback turtles are the world's largest reptile. These unusual sea turtles have a thick, pliable shell that helps them to withstand great depths—they can swim more than one thousand meters below the surface in search of food. And what food source sustains these goliaths? Their diet consists almost exclusively of jellyfish, a meal they crisscross the oceans to find. Leatherbacks have been declining in recent decades, and some predict they will be gone by the end of this century. Why? Because of two primary factors: human redevelopment of nesting beaches and commercial fishing. There are only twenty-nine index beaches in the world where these turtles nest, and there is immense pressure to develop most of them into homes or resorts. At the same time, longline and gill net fisheries continue to overwhelm waters frequented by leatherbacks. In *The Leatherback Turtle*, James R. Spotila and Pilar Santidrián Tomillo bring together the world's leading experts to produce a volume that reveals the biology of the leatherback while putting a spotlight on the conservation problems and solutions related to the species. The book leaves us with options: embark on the conservation strategy laid out within its pages and save one of nature's most splendid creations, or watch yet another magnificent species disappear.

Esta investigación aborda las prácticas y estrategias desarrolladas por los jueces de paz en un espacio político que surge como resultado de la incorporación de las tierras de la frontera interior, dentro del proceso general de consolidación del Estado argentino a fines del siglo XIX. Se trata de desentrañar los mecanismos que utilizaron los agentes legales para administrar justicia adaptando las instrucciones dispuestas por la superioridad estatal. La actuación del juez lego en los asuntos destinados a mantener el orden interno en una sociedad en formación contribuyó a resaltar sus prácticas y a diferenciarlo del resto de la población. La base que sustenta la investigación está formada por los acuerdos y especialmente por las redefiniciones que ensayaron los jueces de paz del Territorio Nacional de la Pampa sobre el tipo de organización institucional proyectada por la elite nacional. La mayor parte de los cuestionamientos se vinculaban con la coherencia de la estructura jerárquica de poder que definía la relación entre agentes estatales y, específicamente, con la forma de administrar justicia.

Sharks and dolphins both have torpedo-shaped bodies with fins on their backs. They slice through the water to grab their prey with sharp teeth. But despite their similarities, sharks and dolphins belong to different animal classes: one is a fish and gets oxygen from the water and the other is a mammal and gets oxygen from the air. Marine educator Kevin Kurtz guides early readers to compare and contrast these ocean predators through stunning photographs and simple, nonfiction text.

Luis Fayad (Bogotá, 1945) es uno de los escritores más representativos de la actual narrativa colombiana e hispanoamericana. Desde los años setenta se convierte en uno de los grandes cronistas de la Bogotá moderna, recreando en su prosa los espacios marginales y conflictivos de la nueva urbe, las tensiones económicas entre las diferentes clases sociales, la marginación social y cultural, las nuevas formas de pobreza y supervivencia y la insolidaridad de quienes tienen una posición privilegiada. "Los parientes de Ester" es una ficción urbana que genera una atmósfera con tintes pesimistas y cierta desesperación, marcada por la estética del deterioro, en donde todo cambio supone un empeoramiento en la calidad de vida de sus personajes.

Great Houses of Havana celebrates one hundred years of creativity, design, and style that made the city "the Paris of the Caribbean." For four hundred years, Havana was the center of Spanish trade in the western hemisphere. With the expansion of the sugar industry, independence from Spain, and North American investment, Havana became a city of great wealth, great style, and great houses in a vocabulary that was a unique amalgam of European, American, and Caribbean elements. Great Houses of Havana traces the evolution of the Cuban home from the classic, Spanish colonial courtyard house to the "Tropical Modernist" villas of the 1950s—houses reflecting international architecture trends while remaining true to the Cuban tradition. Cuba's social history is woven throughout the book. Vintage photographs illustrate Havana's sophisticated lifestyle—the masked balls, yacht club picnics, and dynastic weddings of fashionable Cubans and their international guests. Popular cafes, hotels, theaters, and weekend resorts are also featured, creating a view of the privileged life inside the gated mansions of the city's grandest neighborhoods.

The book is designed to help public and private decision-makers and academics deepen their knowledge and understanding of the contexts, obstacles and challenges of a variety of business types involved in Industrial Symbiosis and Circular Economy practices. Industrial Symbiosis is reported in the Action Plan on the Circular Economy developed by the European Commission in 2015 (COM / 2015/0614 final) and in its revision of 14 March 2017, but relatively little is known of how these practices start, develop or fail, and mutate in a rapidly changing context. Including selected contributions presented at the 24th ISDRS 2018 Conference, "Actions for a Sustainable World: from theory to practice" in the two theme tracks "5c. Circular economy, zero waste & innovation" and "5g. Industrial symbiosis, networking and

cooperation as part of industrial ecology”, this book offers a transdisciplinary perspective on real experiences of industrial symbiosis, performed both by industries and the scientific community, best practices, success and unsuccessful cases (implemented or under implementation), with the final aim to promote the adoption of Industrial Symbiosis as an operational and systematic tool for the Circular Economy. In particular, a focus on the environmental, social, and economic impact of Circular Economy and Industrial Symbiosis practices, and how those impacts may be context and/or scale dependent is given.

This interdisciplinary volume explores the unique role of the sociohistorical factors of isolation and contact in motivating change in the varieties of Spanish worldwide. Recognizing the inherent intersectionality of social and historical factors, the book’s eight chapters investigate phenomena ranging from forms of address and personal(ized) infinitives to clitics and sibilant systems, extending from Majorca to Mexico, from Panamanian Congo speech to Afro-Andean vernaculars. The volume is particularly recommended for scholars interested in historical linguistics, sociolinguistics, history, sociology, and anthropology in the Spanish-speaking world. Additionally, it will serve as an indispensable guide to students, both at the undergraduate and graduate level, investigating sociohistorical advances in Spanish.

Suppose I am a blind man, and I use a stick. I go tap, tap, tap. Where do I start? Is my mental system bounded at the handle of the stick? Is it bounded by my skin? Does it start halfway up the stick? Does it start at the tip of the stick? (Bateson, 1972:459; Form, Substance and Difference) One of the most amazing capacities of the human mind is its ability to go beyond its boundaries. The well-known example of the blind man by Gregory Bateson helps us understand how our mind is able to expand its potentiality thanks to the use of a tool. This famous example demonstrates two specific features that characterize the relationship between the human mind and the use of tool. From a neuropsychological point of view, the tool is integrated in near space, extending it to the end point of the instrument. From a phenomenological point of view, we are present in the tool because we can use it in an intuitive way to realize our intentions. As Riva and Mantovani suggested, there is also another type of relationship between mind and technology, namely the second-order mediated action. In this case, the subject uses the body to control a distal tool that controls a different one to exert an action upon an external object. An example of a second-order mediated action is what happens with Virtual Reality (VR): I use my body to move an avatar (a distal tool) to exert an action upon an external object (a virtual environment). On one side, the outcome of this process further extends the space of action. From an experiential viewpoint, when interacting in a virtual space, we are also present in the distal virtual environment. On these theoretical bases, it is clear what makes VR development distinctively important is that it represents more than a simple technology in different domains of human society. In recent years, the field of VR has grown immensely. Practical applications for the use of this advanced technology encompasses many fields, from personnel training supported by interactive 3D images in industrial centers, to the use of interactive virtual environments for marketing purposes. One of the newest fields to benefit from the advances in VR technology is medicine and healthcare. Impressive advances in technology, coupled with a reduction in the economic costs have supported the development of more usable, useful, and accessible VR systems that can uniquely target a range of physical, psychological, and cognitive clinical targets and research questions. The aim of the book *Virtual Reality-Technologies, Medical Applications, and Challenges* is twofold: (1) to provide a critical overview of the most interesting medical applications of VR technologies and (2) to reflect on the future challenges in this growing field.

This volume offers theoretically informed surveys of topics that have figured prominently in morphosyntactic and syntactic research into Romance languages and dialects. We define syntax as being the linguistic component that assembles linguistic units, such as roots or functional morphemes, into grammatical sentences, and morphosyntax as being an umbrella term for all morphological relations between these linguistic units, which either trigger morphological marking (e.g. explicit case morphemes) or are related to ordering issues (e.g. subjects precede finite verbs whenever there is number agreement between them). All 24 chapters adopt a comparative perspective on these two fields of research, highlighting cross-linguistic grammatical similarities and differences within the Romance language family. In addition, many chapters address issues related to variation observable within individual Romance languages, and grammatical change from Latin to Romance.
