Ecological and biodiversity-based monitoring has been marked by an appalling lack of effectiveness and lack of success in Australia for more than 40 years, despite the billions of dollars that are invested in biodiversity conservation annually. What can be done to rectify this situation? This book tackles many aspects of the problem of biodiversity monitoring. It arose from a major workshop held at The Australian National University in February 2011, attended by leaders in the science, policy-making and management arenas of biodiversity conservation. Chapter contributors examine what has led to successful monitoring, the key problems with biodiversity monitoring and practical solutions to those problems. By capturing critical insights into successes, failures and solutions, the authors provide high-level guidance for important initiatives such as the National Biodiversity Strategy. Ultimately, the authors hope to considerably improve the quality and effectiveness of biodiversity monitoring in Australia, and to arrest the decline of biodiversity. **KEY FEATURES** * Engaging style * Practical information that is based on very high quality scientific information

The book explores a number of different perspectives and theories on human learning and motivation. The author examines different types of learning across the curriculum and assesses the most effective types of teaching to facilitate different forms of learning. By examining the way readers process text and identifying the knowledge and skills needed to become a proficient reader, the author explains why learning problems can sometimes occur and what can be done to prevent or overcome these difficulties.

Planning is an important human ability that guides behaviour and thereby complements instinctual fixed action patterns. How do people learn to plan? How do they develop the various skills that are implied by planfulness? This volume explores these questions as well as the concept of planning and its relationships to the concepts of problem-solving and organizational skills. The editors of this volume have drawn upon an international cadre of scholars to discuss the issues of planning and planful behaviours from a broad range of perspectives. The volume offers a comprehensive review and critical analysis of research and theory on the development of planning ability. Cognitive and developmental psychologists, educational researchers, and students hitherto frustrated by the complexity of the thinking about planning and fragmentation of the literature will find Blueprints for Thinking an invaluable resource.
