

Managerial Accounting By James Jiambalvo

This text is an unbound, binder-ready edition. Recognizing that most students will pursue careers as managers not accountants, Managerial Accounting, 5th edition by James Jiambalvo is designed to teach the fundamental ideas of managerial accounting while making direct connections between managerial accounting, techniques in the business world, and students' future careers. Students and instructors alike have praised this text's clear and concise writing style, to-the-point discussions, real world cases, managers' insights, illustrated ideas, and examples. Managerial Accounting, 5th edition highlights decision making through incremental analysis and stresses that you "Get What You Measure" in each chapter. This new edition provides students with many opportunities to test their knowledge as they learn the concepts throughout each chapter. Students learn to apply their knowledge to solving problems like real managers in the text and in WileyPLUS . WileyPLUS sold separately from text.

Explores computer-intensive probability and statistics for ecosystem management decision making Simulation is an accessible way to explain probability and stochastic model behavior to beginners. This book introduces probability and statistics to future and practicing ecosystem managers by providing a comprehensive treatment of these two areas. The author presents a self-contained introduction for individuals involved in monitoring, assessing, and managing ecosystems and features intuitive, simulation-based explanations of probabilistic and statistical concepts. Mathematical programming details are provided for estimating ecosystem model parameters with Minimum Distance, a robust and computer-intensive method. The majority of examples illustrate how probability and statistics can be applied to ecosystem management challenges. There are over 50 exercises - making this book suitable for a lecture course in a natural resource and/or wildlife management department, or as the main text in a program of self-study. Key features: Reviews different approaches to wildlife and ecosystem management and inference. Uses simulation as an accessible way to explain probability and stochastic model behavior to beginners. Covers material from basic probability through to hierarchical Bayesian models and spatial/ spatio-temporal statistical inference. Provides detailed instructions for using R, along with complete R programs to recreate the output of the many examples presented. Provides an introduction to Geographic Information Systems (GIS) along with examples from Quantum GIS, a free GIS software package. A companion website featuring all R code and data used throughout the book. Solutions to all exercises are presented along with an online intelligent tutoring system that supports readers who are using the book for self-study.

This book is written for professional managers, both in public and private sectors, who have little or no background in Economics, but have to face, on a regular basis, the challenges posed by a rapidly changing macroeconomic policy environment. The book attempts to provide an understanding of how macroeconomic policies work and, in turn, how they impact the business environment. It adopts a uniquely practical approach to explain various aspects by deliberately avoiding jargon, diagrams and equations. Instead, a story mode has been in-built for easy grasp.
