This volume – now in its second edition – has been completely updated to provide the most comprehensive and accessible handbook of practices and tools for the clinical assessment of child and adolescent intelligence. Designed specifically as a teaching tool, it provides students with an accessible guide to interpretation and applies the same interpretive systems across many tests. It emphasizes the proper interpretation of intelligence tests within the context of a child's life circumstances and includes several devices to enhance the logical processes of assessment, beginning with test selection and concluding with the reporting of results. In addition, Clinical Assessment of Child and Adolescent Intelligence: - Stresses the importance of the interpretive process over the value of specific tests - Fosters a deeper understanding of the intelligence construct - Emphasizes learning by example, using valuable case studies and vignettes designed to provide students with concrete models to emulate This edition covers all facets of intelligence testing, including detailed explanations of test interpretation, theory, research, and the full-range of testing options for preschoolers through adult clients. New chapters have been introduced on neuropsychological approaches, adolescent and adult intelligence, including coverage of WAIS-III and KAIT, and achievement and intelligence screeners have been added. And although designed primarily as a text for beginning graduate students, the book is also useful as a "refresher" for clinicians who are looking for updated assessment information.

The main focus of this book is providing evidence on and interpreting the risks associated with heated tobacco products (HTPs) in terms of their health effects and social effects; in addition, the author

introduces a harm reduction theory related to HTPs and electronic cigarettes. The book also addresses the history of these products, their marketing strategies, and policy implications. These products are new and the accompanying health risks have yet to be determined. However, since Japan accounts for more than 80% of the world's market for IQOS, the most popular heated tobacco product, researchers around the globe will be very interested in the outcomes. Written by a leading researcher in the field of tobacco control, *Science and Practice for Heated Tobacco Products* offers a valuable, unique resource for researchers in the fields of epidemiology, public health, social sciences, addiction, and tobacco research. Since tobacco is associated with a host of diseases including cancers, cardiovascular diseases, diabetes mellitus, and respiratory illnesses, researchers and healthcare workers whose work involves these diseases will find this book both thought provoking and insightful.
