Most small businesses cite lack of capital is a major constraint on growth. "Raising Capital" focuses on non-bank sources of capital since banks only lend to companies that fit a very narrow profile. The topics covered include: (i) capital sources entrepreneurs can tap when they are too small or unusual for banks, (ii) angel investors and venture capital, (iii) where to look for angels, venture capitalists and other capital sources, (iv) how to pitch your company and close the deal, (v) deal terms and issues that arise when negotiating a deal, (vi) going public through an IPO or little known small public offerings, (viii) asset based lenders, and (ix) other financing vehicles including: bond, commercial paper, PIPEs and securitization. The scope of the book ranges from capital for entrepreneurs who have little more than an idea, to capital for top rated companies.

The major goals of this revision have been to streamline the text and to present more student oriented examples. We are also providing a new design with enhanced four colour graphics. Much fine tuning and trimming has gone into almost every chapter resulting in a more approachable textbook for your students. Several chapters that are rarely used will now appear on the book's website. The 9th edition will be much better integrated with the book's website where students can get additional information and/or current events associated with many major topics in the text. Also, the website will have "Want to see the Math Notes" for those instructors that choose a more sophisticated math treatment of the major topics in both Micro and Macro. Another commitment to Instructor Support will be the annual updating of time sensitive PowerPoint slides.

"This course and this book are about management and managers. Managers are one thing that all organizations--no matter the size, kind, or location--need. And there's no doubt that the world managers face has changed, is changing, and will continue to change. The dynamic nature of today's organizations means both rewards and challenges for the individuals who will be managing those organizations. Management is a dynamic subject, and a textbook on it should reflect those changes to help prepare you to manage under the current conditions. We've written this 14th edition of Management to provide you with the best possible understanding of what it means to be a manager confronting change and to best prepare you for that reality. But not every student aspires to a career in management. And even if you do, you may be five or ten years away from reaching a managerial position. So you might rightly feel that taking a course in management now may be getting ahead of the game. We hear you. In response to these concerns, we've added new material to this book that is important and relevant to everyone working in an organization--manager and non-manager alike. Our "Workplace Confidential" pages identify, analyze, and offer suggestions for dealing with the major challenges

that surveys indicate frustrate employees the most. You should find these pages valuable for helping you survive and thrive in your workplace. Surprisingly, this topic has rarely been addressed in business programs. Inclusion in an introductory management course appeared to us to be a logical place to introduce these challenges and to provide guidance in handling them"--

"In a world economy that is becoming increasingly integrated and interdependent, the relationship between business and society is becoming ever more complex. The globalization of business, the emergence of civil society organizations in many nations, and rapidly changing government regulations and international agreements have significantly altered the job of managers and the nature of strategic decision making within the firm. At no time has business faced greater public scrutiny or more urgent demands to act in an ethical and socially responsible manner than at the present"--

The last ten years have seen an enormous surge of interest in issues that are common to psychology and economics. How do people make decisions about economic issues? How should they make such decisions? Does public policy or regulation succeed in its aim of helping people make these decisions? What situations aid cooperation? This volume explores some of the ways in which economists and psychologists have tried to answer these questions. The authors are an international mix of economists and psychologists, and as such they demonstrate a diverse range of approaches to tackling different aspects of these issues. This is a frontier area for both psychology and economics, and consequently it is relatively free, lawless and, above all, exciting. This collection reflects the diversity and energy that characterise this rapidly growing interdisciplinary field. This book was originally published as a special issue of New Zealand Economic Papers.

Over the course of their interaction, economics and migration research have treated each other with mutual indifference. When migration research attempted to overstretch its bounds, economics reduced its analytical scope to those areas that originally seemed to belong to the genuine economic sphere. This volume considers eleven case studies that aim to overcome the artificial barrier between the two disciplines by applying the economic method to migratory phenomena, utilizing economic theories in order to explain migratory patterns, and regarding the structure and development of markets as crucial to the shaping of population stocks and the flow of migrants.

Approximately 25% of Latin Americans live on less than \$2 a day, and Latin America is the most unequal region of the world. Poverty and inequality cause suffering and slow development. The solution must include generating an inclusive development process through satisfying the basic needs of the poor that enhance their productivity, that enable them to contribute to the development process, and that enables them to earn the income necessary to live a full life. Decentralization of taxing and spending from the central government to lower levels of government can help to satisfy basic needs of the poor and create an inclusive development process. However, decentralization is a step-by-step process that must be implemented by taking into account real-world circumstances such as a lack of administrative ability in local government, and by formulating policy accordingly. The book derives economic principles for implementing the process of decentralization, and it presents cases that illustrate the principles at work. It is an economic guide for policymakers and practitioners.

This best-selling text emphasizes that social and cultural changes are the pervasive realities of our era. One of the main themes of Contemporary Society is that the transition from an industrial to a post-industrial order in the modern world is fraught with difficulties, as was the transition from an agricultural to an industrial order in an earlier era. Within this framework, we can observe the increasing fragmentation of the social order, which tends to lead people away from community and a common purpose and often invites conflict and disunity. At the same time, countervailing social forces are also at work, providing some stability, some shelter in the storm. Finally, societies are faced with the rapid and transformative power of information technology, a fact that propels separate groups of people into a global entity. Covering the conventional areas of international economics, this edition provides the blend of events and analysis to help readers understand global economic developments and to evaluate proposals for changes in economic policies. It combines economic analysis with attention to the issues of economic policy that are important.

This lively introduction to heterodox economics provides a balanced critique of the standard introductory macroeconomic curriculum. In clear and accessible prose, it explains many of the key principles that underlie a variety of alternative theoretical perspectives (including institutionalist economics, radical economics, Post Keynesian economics, feminist economics, ecological economics, Marxist economics, social economics, and socioeconomics). Because the book's structure parallels the chapters and subject matter presented in a typical introductory macroeconomics textbook, "Reintroducing Macroeconomics" provides readers with a running commentary on the standard approach, while simultaneously introducing them to a broader range of ideas about the causes and appropriate policy responses to a wide range of common economic problems. Although designed primarily as a companion volume for students in introductory economics courses, the book can also be used effectively for more targeted applications that highlight a particular economic issue or approach. It will be of particular interest to students in related disciplines (such as American Studies, anthropology, black studies, environmental studies, gender studies, history, political science, and sociology) who may be required to take introductory economics classes and who are interested in gaining an alternative perspective. By demonstrating the vitality and common ground underlying a broad spectrum of heterodox approaches, "Reintroducing Macroeconomics" brings alternative perspectives into the classroom in an accessible way that empowers students to think about the economy in new and exciting ways. The text includes end-of-chapter study questions, as well as a detailed note to instructors.

All who live yearn for freedom--freedom from political oppression, poverty, disease, crime, war, and misery in all its

forms. Christians believe that only God has the infinite wisdom, resources, and will to provide what we so desperately need. The contributors to *Mary, God-Bearer to a World in Need* offer scholarly explorations of ways in which the woman who bore God Incarnate into human history might help humankind to open its creaturely finitude to God's infinite possibilities. By relating such topics as faith, justice, economics, family life, and interreligious dialogue to Marian doctrine, humanity gains new insights useful for healing society's bleeding wounds. In these essays, the God-Bearer becomes present to a world still very much in need of the divine grace mediated through her motherhood.

The 33 papers presented in this book were selected from amongst the 97 papers presented during the sixth edition of the International Conference on Integrated Design and Manufacturing in Mechanical Engineering during 28 sessions. This conference represents the state-of-the-art research in the field. Two keynote papers introduce the subject of the Conference and are followed by the different themes highlighted during the conference.

Human factors and usability issues have traditionally played a limited role in security research and secure systems development. Security experts have largely ignored usability issues--both because they often failed to recognize the importance of human factors and because they lacked the expertise to address them. But there is a growing recognition that today's security problems can be solved only by addressing issues of usability and human factors. Increasingly, well-publicized security breaches are attributed to human errors that might have been prevented through more usable software. Indeed, the world's future cyber-security depends upon the deployment of security technology that can be broadly used by untrained computer users. Still, many people believe there is an inherent tradeoff between computer security and usability. It's true that a computer without passwords is usable, but not very secure. A computer that makes you authenticate every five minutes with a password and a fresh drop of blood might be very secure, but nobody would use it. Clearly, people need computers, and if they can't use one that's secure, they'll use one that isn't. Unfortunately, unsecured systems aren't usable for long, either. They get hacked, compromised, and otherwise rendered useless.

There is increasing agreement that we need to design secure systems that people can actually use, but less agreement about how to reach this goal. *Security & Usability* is the first book-length work describing the current state of the art in this emerging field. Edited by security experts Dr. Lorrie Faith Cranor and Dr. Simson Garfinkel, and authored by cutting-edge security and human-computerinteraction (HCI) researchers world-wide, this volume is expected to become both a classic reference and an inspiration for future research. *Security & Usability* groups 34 essays into six parts: *Realigning Usability and Security*---with careful attention to user-centered design principles, security and usability can be synergistic.

Authentication Mechanisms-- techniques for identifying and authenticating computer users. *Secure Systems*--how system software can deliver or destroy a secure user experience. *Privacy and Anonymity Systems*--methods for allowing people

to control the release of personal information. Commercializing Usability: The Vendor Perspective--specific experiences of security and software vendors (e.g., IBM, Microsoft, Lotus, Firefox, and Zone Labs) in addressing usability. The Classics--groundbreaking papers that sparked the field of security and usability. This book is expected to start an avalanche of discussion, new ideas, and further advances in this important field.

"Decentralization as a Means of Satisfying Basic Needs: An Economic Guide for Policymakers" by J. Michael McGuire The challenge addressed in this book is designing the degree of decentralization that is most effective in satisfying the basic needs of the poor. Case studies of decentralization at work in the real world are presented and analyzed. The aim of this book is to help the reader who wishes to use decentralization to help implement a basic needs approach to development. The aim of this book is to help readers use the decentralization of government functions to implement a basic needs approach to development. The aim is not to "give the answer," but rather to provide insight into decentralization as a process and to help practitioners develop skills in designing their own decentralization programs.

Built from the ground up to focus on what matters to students in today's high-tech, globalized world, Dean Karlan and Jonathan Morduch's Macroeconomics represents a new generation of products, optimized for digital delivery and available with the best-in-class adaptive study resources in McGraw-Hill's LearnSmart Advantage Suite. Engagement with real-world problems is built into the very fabric of the learning materials as students are encouraged to think about economics in efficient, innovative, and meaningful ways. Drawing on the authors' experiences as academic economists, teachers, and policy advisors, a familiar curriculum is combined with material from new research and applied areas such as finance, behavioral economics and the political economy, to share with students how what they're learning really matters. This modern approach is organized around learning objectives and matched with sound assessment tools aimed at enhancing students' analytical and critical thinking competencies. Students and faculty will find content that breaks down barriers between what goes on in the classroom and what is going on in

our nation and broader world. By teaching the right questions to ask, Karlan and Morduch provide readers with a method for working through decisions they'll face in life and ultimately show that economics is the common thread that enables us to understand, analyze, and solve problems in our local communities and around the world.

'The volume is of greatest interest to those pursuing issues of the implementation of economics education and its impact at an elementary level on economic understanding and attitudes. Through generally careful statistical analysis it shows what can be done even in a most difficult environment, as well as the constraints on change imposed by Soviet legacies. It is a valuable addition to the literature on economics pedagogy.' - Richard E. Ericson, Slavic Review This comprehensive and impressive volume

presents the first book-length, multi-country investigation of reform of economic education in transition economies. Authors from the West and from transition economies describe the major changes in economics content and instruction that occurred in schools and universities throughout nations in Eastern and Central Europe and the former Soviet Union from 1989 to 2000.
