As the population ages and more people with disabilities seek to drive, occupational therapists will increasingly need to address this instrumental activity of daily living with their clients. The OT-DORA Battery is a unique, user-friendly, and convenient collection of assessments that allows efficient evaluation of an individual's cognitive, perceptual, behavioral, physical, and sensory skills and abilities that are related to driving, prior to an on-road assessment. The OT-DORA also offers the ability to screen clients who are unsafe to take an on-road assessment. Done easily in a clinical setting, without driving simulators or taking the client on-road, the OT-DORA Battery allows practitioners to, with minimal risk and expense, find clients' strengths and weaknesses and pinpoint areas on which to focus during rehabilitation. The manual describes how the OT-DORA was developed, summarizes research to support its use, and details instructions on how to administer the Battery with clients. A flash drive contains downloadable and writable versions of the administration and client response booklets for use in the United States, Canada, the United Kingdom, and Australia. Sections of the assessment include- Initial Interview Medical History Medication Screen Sensory Assessments-for communication and hearing, vision, and proprioception Physical Assessments-for motor skills, balance, and endurance Cognitive Assessments Summary of Issues Further Assessments. The OT-DORA Battery can be administered by generalist and specialist occupational therapists as well as by other health professionals with specialized training, experience, and certification in driver assessment, as well as by driver rehabilitation professionals with specialized training in determining how health-related changes can affect performance skills and elicit patterns that may compromise driving ability.

"Seating and Wheeled Mobility: A Clinical Resource Guide presents clinical assessment considerations when working with a person with a disability who may need wheelchair seating for postural support, skin integrity, or a wheelchair base to best meet dependent or independent mobility needs. Michelle L. Lange and Jean L. Minkel have designed this text to support occupational and physical therapists, complex rehabilitation technology suppliers, and even third-party payers who are interested in wheelchair seating and mobility assessment and applications. Seating and Wheeled Mobility provides a wide spectrum of information from foundational information for those practitioners who are new to the field to in-depth, population-specific information for practitioners who perhaps have not worked with a particular population in the past. Information sharing, opportunities for demonstration and trial, and patience on the part of the clinician working with the person with a disability are all critical precursors to the actual process of making equipment recommendations. Seating and Wheeled Mobility is divided into sections, each addressing a different area of clinical practice: - The first section is an in-depth presentation of the assessment process and the critical understanding of pressure management needed by the clinical team when working with a client population who rely on wheeled mobility. - The second section focuses on postural support. Also included is a completely updated method to measure and describe the seated person and related support surfaces needed when recommending a device. - The third section lays the foundation for clinical decision making around the assessment for and application of the most appropriate wheeled

mobility device"--Provided by publisher.

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership.
