Bridging the gap between practical crime scene investigation and scientific theory, *Crime Scene Forensics: A Scientific Method Approach* maintains that crime scene investigations are intensely intellectual exercises that marry scientific and investigative processes. Success in this field requires experience, creative thinking, logic, and the correct application of the science and the scientific method. Emphasizing the necessary thought processes for applying science to the investigation, this text covers:

- The general scene investigation process, including definitions and philosophy as well as hands-on considerations
- Archiving the crime scene through photography, sketching, and video
- Managing the crime scene investigation—the glue that holds the investigation together
- Searching the crime scene—the logical byproduct of archiving and management
- Impression/pattern evidence, including fingerprints, bloodstains, footwear impressions, and tire track impressions
- The biological crime scene and recognizing, collecting, and preserving biological evidence, including forensic entomology and evidence found at bioweapon scenes
- The fundamental principles of evidence as expressed by the Principle of Divisible Matter and the Locard Exchange Principle: every touch leaves a trace
- Trace evidence, including

glass, paint, and soil Shooting incident scenes, with discussion of bullet paths and gunshot residue The final section examines fire scenes, quality assurance issues, and methods for collecting and preserving various evidence types not covered in other chapters. The delicate balance among logic, science, and investigative activity must be understood in order to successfully work a crime scene. Enhanced by more than 200 color images, this volume provides investigators and students with the tools to grasp these critical concepts, paving an expeditious path to the truth.

Magic Lantern Guides Multimedia Workshops The world's best photographic package! Magic Lantern Guides and DVDs have always provided the very best, most in-depth coverage of a camera's ins-and-outs.
