Miranda got over her attraction to bad boys about the time one of them knocked her up at the age of eighteen. Seth's mocking gray eyes and military-buff bod, though, are pure and utter temptation. And when a flooded apartment forces her and her twins to move in with him, she can no longer resist the urge to set off some serious fireworks between the sheets. But any involvement with Seth will be strictly physical—and temporary. So when Seth decides permanent is what he wants, Miranda must steel her defenses before she does something incredibly foolish...like fall in love. Warning: This book contains a bad boy SEAL who knows what he wants and will go to any lengths to get it. This text is about one small field on the crossroads of statistics, operations research and computer science. Statisticians need random number generators to test and compare estimators before using them in real life. In operations research, random numbers are a key component in large scale simulations. Computer scientists need randomness in program testing, game playing and comparisons of algorithms. The applications are wide and varied. Yet all depend upon the same computer generated random numbers. Usually, the randomness demanded by an application has some built-in structure: typically, one needs more than just a sequence of independent random bits or independent uniform $[0,1]$ random variables. Some users need random variables with unusual densities, or random combinatorial objects with specific properties, or random geometric objects, or random processes with well defined dependence structures. This is precisely the subject area of the book, the study of non-uniform random variables. The plot evolves around the expected complexity of random variable generation algorithms. We set up an idealized computational model (without overdoing it), we introduce the notion of uniformly bounded expected complexity, and we study upper and lower bounds for computational complexity. In short, a touch of computer science is added to the field. To keep everything abstract, no timings or computer programs are included. This was a labor of love. George Marsaglia created CS690, a course on random number generation at the School of Computer Science of McGill University.

problems in a range of disciplines, including biology, biochemistry, and nanotechnology, one of the curriculum's foundations is built upon the subject of transport phenomena. Transport Phenomena Fundamentals, Second Edition provides a unified treatment of heat, mass, and momentum transport based on a balance equation approach. Designed for a two-term course Used in a two-term transport phenomena sequence at Rensselaer Polytechnic Institute, this text streamlines the approach to how the subject is taught. The first part of the book takes students through the balance equation in the context of diffusive transport, be it momentum, energy, mass, or charge. Each chapter adds a term to the balance equation, highlighting the effects of that addition on the physical behavior of the system and the underlying mathematical description. The second half of the book builds upon the balance equation description of diffusive transport by introducing convective transport terms, focusing on partial rather than ordinary differential equations. The Navier–Stokes and convective transport equations are derived from balance equations in both macroscopic and microscopic forms. Includes examples and problems drawn from Comsol® software The second edition of this text is now enhanced by the use of finite element methods in the form of examples and extended homework problems. A series of example modules are associated with each chapter of the text. Some of the modules are used to produce examples in the text, and some are discussed in the homework at the end of each chapter. All of the modules are located online at an accompanying website which is designed to be a living component of the course. (available on the download tab)

In and Out of Uniform By: Lisa R. Kirk In and Out of Uniform is the captivating memoir of retired U.S. Army service member Lisa R. Kirk that chronicles stories of her life both in and out of the military. Readers get an intimate glimpse into the many ups and downs she experienced as a woman in the male-dominated world of the military. Kirk's patriotism and perseverance shine through as she shares painful experiences, from her first year in the army in 1996, to her time as a drill sergeant, to the difficult process of transitioning back to civilian life. Kirk wrote this book as a form of therapy for the internalized negative feelings that were affecting her health. She hopes this work inspires and motivates others who have experienced abuse and discrimination. She wants them to know they are not alone and encourage them to open up about their experiences so that they can experience healing and find hope for the future.
