The contribution of coaching psychology to educational fields is increasingly recognised. This timely book introduces coaching psychology as a facilitative method to support learning in different educational contexts. *Coaching Psychology for Learning: Facilitating Growth in Education* is conveniently organised into three parts: Part One begins with a detailed account of educational paradigms, learning theories, and coaching psychology theories; it then reviews important studies of coaching applied to the educational field and identifies a number of gaps to which coaching psychology for learning can contribute; Part Two presents two empirical participatory studies of coaching psychology for learning, which draw from both doctoral research conducted in the UK and educational work in Mainland China; two original and evidence-based coaching models are also illustrated; Part Three consolidates the empirical evidence and original coaching models by exploring the nature of educational coaching, including the context, purpose, processes, and people and their interrelations. The review of learning theories and coaching psychology theories in Part One enables the reader to gain a quick understanding of coaching psychology and its role in education, while the empirical studies in Part Two are particularly useful for undergraduate and postgraduate students, providing practical examples of how to conduct coaching psychology research in the field of education, in both the West and the East. The book also offers advice on design and implementation issues, which will benefit educational psychologists and coaching psychologists who wish to focus their professional practice in education. *Coaching Psychology for Learning* is essential reading for any teacher, student or practitioner who wishes to become an educational coach to facilitate learning. It will appeal to coaches and coaching psychologists, including those in training and at postgraduate level, as well as professionals in educational settings, such as school leaders, counsellors and coaches, and educational psychologists.

Cybercafes, which are places where Internet access is provided for free, provide the opportunity for people without access to the Internet, or who are traveling, to access Web mail and instant messages, read newspapers, and explore other resources of the Internet. Due to the important role Internet cafes play in facilitating access to information, there is a need for their systems to have well-installed software in order to ensure smooth service delivery. *Security and Software for Cybercafes* provides relevant theoretical frameworks and current empirical research findings on the security measures and software necessary for cybercafes, offering information technology professionals, scholars, researchers, and educators detailed knowledge and understanding of this innovative and leading-edge issue, both in industrialized and developing countries.

This translation brings a landmark systems engineering (SE) book to English-speaking audiences for the first time since its original publication in 1972. For decades the SE concept championed by this book has helped engineers solve a wide variety of issues by emphasizing a top-down approach. Moving from the general to the specific, this SE concept has situated itself as uniquely appealing to both highly trained experts and anybody managing a complex project. Until now, this SE concept has only been available to German speakers. By shedding the overtly technical approach adopted by many other SE methods, this book can be used as a problem-solving guide in a great variety of disciplines, engineering and otherwise. By segmenting the book into separate parts that build upon each other, the SE concept's accessibility is reinforced. The basic principles of SE, problem solving, and systems design are helpfully introduced in the first three parts. Once the fundamentals are presented, specific case studies are covered in the fourth part to display potential applications. Then part five

offers further suggestions on how to effectively practice SE principles; for example, it not only points out frequent stumbling blocks, but also the specific points at which they may appear. In the final part, a wealth of different methods and tools, such as optimization techniques, are given to help maximize the potential use of this SE concept. Engineers and engineering students from all disciplines will find this book extremely helpful in solving complex problems. Because of its practicable lessons in problem-solving, any professional facing a complex project will also find much to learn from this volume.

Leaders represent a necessary part of any organizational structure, and leadership styles can vary greatly between individuals. Servant leadership is one such leadership style which is helping individuals guide and encourage others within their organization. *Servant Leadership: Research and Practice* explores the concept of rethinking the leader-subordinate relationship structure through the dissolution of an authoritarian leadership style. This book supports current and future leaders through relevant discussions on methodologies and tools in support of servant leadership, and is designed for use by business managers, executives, scholars, and upper-level students.

This book constitutes the proceedings of the 15th International Conference on Perspectives in Business Informatics Research, BIR 2016, held in Prague, Czech Republic, in September 2016. Overall, 61 submissions from 16 countries were rigorously reviewed by 42 members of the program committee representing 21 countries. The selected 21 full papers and 3 short papers are included in this volume together with 2 abstracts of invited talks. This year again, the papers presented at the conference cover many important aspects of the development, use, and application of management information systems. The papers have been organized in topical sections on Business Processes and Enterprise Modeling; Information Systems Development; Information Systems Management; Learning and Capability; and Data Analysis. A multicultural education textbook designed to help teachers-in-training prepare for increasingly diverse classrooms offers a unique approach which encourages the reader to interact with the text through reflection exercises, critiques, and dialogues.

"This book will help change the paradigm that has gripped the mental health professions for so long and will be a positive boost for those who know there must be a better and more affirmative way to do this important work." -Dennis Saleebey, DSW Professor Emeritus School of Social Welfare, University of Kansas In this book, Kim Anderson demonstrates the extent to which individuals with histories of family violence can have "self-correcting" tendencies that promote their positive adaptation in overcoming trauma. These strengths, which often go unrecognized or underappreciated, can be used for healing. This book assists mental health practitioners in identifying, supporting, and validating the resilient capacities of their clients. Anderson provides new conceptual frameworks and clinical strategies for integrating resilience-oriented and strengths-based treatment with survivors of family violence. The book discusses resilience in survivors of childhood incest, children of battered women, and individuals formerly in violent domestic relationships. Key topics discussed: Dynamics and consequences of family oppression and violence The power of recovery and posttraumatic growth Assessments that capture client strengths, resilience, and acts of resistance Spirituality: making meaning of one's trauma and purpose in life This book challenges the premise that survivors who have suffered from family violence will remain wounded throughout life. Anderson underscores the resourcefulness of clients, and illuminates the many ways people prevail during and in the aftermath of family violence.

Most global businesses focus nearly all their efforts on selling to the wealthiest 14% of the world's population. It's getting harder and harder to make a profit that way: these markets are oversaturated, overcompetitive, and declining. The Invisible Market shows how to unleash new growth and profitability by serving the other 86%. Vihajan Mahajan offers detailed strategies and implementation techniques for product design, pricing, packaging, distribution, advertising, and more. Discover radically different 'rules of engagement' that make emerging markets tick, and how European and Asian

companies are already driving billions of dollars in sales there. Mahajan shows how to understand and manage lack of infrastructure and media, low literacy levels, and 'unconventional' consumer behavior. Learn how to redefine the 'real' competition; tap into the informal economy and unconventional channels; leverage expatriate word-of-mouth; pool demand to reach critical mass; piggyback innovations on local tradition; and price and package to reflect local realities. As traditional markets become increasingly unprofitable, emerging markets become the #1 opportunity for growth. Like no other book available, *Working with Students with Disabilities: A Guide for School Counselors* provides comprehensive coverage of school counselors' roles in special education and working with students with disabilities and connects that coverage to both the ASCA national model and CACREP standards. In *Working with Students with Disabilities*, school counselors will find thoughtful analyses of the legal and regulatory basis for many of the practices in special education, including an overview of pertinent laws including the Individuals with Disabilities Education Improvement Act and Section 504 of the Rehabilitation Act. They'll gain an in-depth understanding of the leadership role that school counselors should play in supporting students, teachers, and families, and they'll also come away with an understanding of the common challenges—like bullying, cyberbullying, and successful transitioning from high school to adult life—to which students with disabilities may be more vulnerable, as well as less common challenges such as behavioral difficulties, autism spectrum disorders, and many more.

To convince yourself or someone else that suicide isn't the answer, you must first accept this reality: For some people, it is the answer. When Frank Selden came home from a tour in Iraq, having been deployed as a member of the Washington Army National Guard, he was a changed man. He went from being a loving father, supportive husband, and proud soldier to someone who no longer loved his country or his own life. He lived for several years under a dark cloud and tried killing himself four times. He should have died each time, but something providential intervened. In *The Suicide Solution*, he examines how he regained his joy for living and initiates an honest discussion on suicide, including its benefits. Making blanket statements such as, 'There is nothing to gain, won't do anything to prevent suicide among those who see it as an attractive option.' With an average of twenty-two veterans killing themselves every single day and with suicide being the second leading cause of death in the 15 to 34 age group, it's time to rethink suicide from the ground up. The importance of critical thinking has surged as academics in higher education realize that many students, upon entering college, lack the critical thinking skills necessary to succeed. While much has been written regarding the 'lack' of critical thinking, less has been written on the success of methods implemented to develop this fundamental skill. *The Handbook of Research on Advancing Critical Thinking in Higher Education* explores the effective methods and tools being used to integrate the development of critical thinking skills in both undergraduate and graduate studies. Due to the

difficulties associated with teaching critical thinking skills to learners of any age, this publication is a crucial addition to the scholarly reference works available to pre-service and early career teachers, seasoned educational professionals, professors across disciplines, curriculum specialists, and educational administrators.

Dr. Hedy Moscovici's life on three continents and her battle with ovarian cancer shaped the unique co-learning and participative leadership perspective on science and mathematics education shared in this book. This text has multiple audiences – prospective and practicing teachers wanting to motivate their students to learn, science and mathematics educators mentoring teachers to become transformative intellectuals and critical pedagogues, parents interested in their children's advancement, and interested policymakers and public wishing to deepen their understanding about learning in general and educational issues in science and mathematics. Two mottos, "I can't learn from you if you can't learn from me" and "to teach is to learn twice," summarize the essence of her message. The spotlight is on the critical interdependence of factors, specifically human ability to construct understanding; necessity of disequilibrium to spark neural rewiring; cognition-emotion (pleasure vs. pain, even science or math phobia) connections; sociocultural context; dilemma created by the absence of a clearly trustworthy "learning meter" for a society valuing objective measurement of quality of learning; human relationships sustained by three R's (rights, responsibilities, respect); and, heightened awareness of power relationships leading to a spirit of collaboration, recognition of each individual's strengths and expertise; and critical pedagogy.

Jesus very presence as the New Testament age unfolded (1st century A.D.), engendered opposition, created conflict, while ushering in grace. His ideas were considered radical. Why is this so? The NIV Archeological Study Bible (2005), NIV Student Bible, et al. and corroborating Extra-Biblical evidence provide a context for the Word view about Jesus in Biblical history, and supports aspects of the social and physical sciences in terms of cultural, socio-economic, political, historical, archeological, and philosophical (apologetics) evidence. As the pages of this book unfold, there is an internal consistency with social science and The Bible. However, where such consistency appeared to diverge, this author attempts to filter out the noise by applying critical

thinking criteria to a Worldview that may not be consistent with the Word view. The goal of this book therefore is to provide some exposition (Greek apologia) of the Word and see how the World fits. Born again Christians can be credible scientists and not compromise Gods Word. After thoughtful reading please send reflective comments to Dr. Herb Green, Jr. at docgreen48@outlook.com

This book contains papers in the fields of Interactive, Collaborative, and Blended Learning; Technology-Supported Learning; Education 4.0; Pedagogical and Psychological Issues. With growing calls for affordable and quality education worldwide, we are currently witnessing a significant transformation in the development of post-secondary education and pedagogical practices. Higher education is undergoing innovative transformations to respond to our urgent needs. The change is hastened by the global pandemic that is currently underway. The 9th International Conference on Interactive, Collaborative, and Blended Learning: Visions and Concepts for Education 4.0 was conducted in an online format at McMaster University, Canada, from 14th to 15th October 2020, to deliberate and share the innovations and strategies. This conference's main objectives were to discuss guidelines and new concepts for engineering education in higher education institutions, including emerging technologies in learning; to debate new conference format in worldwide pandemic and post-pandemic conditions; and to discuss new technology-based tools and resources that drive the education in non-traditional ways such as Education 4.0. Since its beginning in 2007, this conference is devoted to new learning approaches with a focus on applications and experiences in the fields of interactive, collaborative, and blended learning and related new technologies. Currently, the ICBL conferences are forums to exchange recent trends, research findings, and disseminate practical experiences in collaborative and blended learning, and engineering pedagogy. The conference bridges the gap between pure scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, school teachers, industry-centric educators, continuing education practitioners, etc.

The book contains essays on current issues in Social and Political Sciences, such as the issues of governance and social order; social development and community development; global challenges and inequality; civil society and social movement; IT-based community and social transformation; poverty alleviation and corporate social responsibility; and gender issues.
