In this international collection of papers there is a wealth of knowledge on artificial intelligence (AI) and cognitive science (CS) techniques applied to the problem of providing help systems mainly for the UNIX operating system. The research described here involves the representation of technical computer concepts, but also the representation of how users conceptualise such concepts. The collection looks at computational models and systems such as UC, Yucca, and OSCON programmed in languages such as Lisp, Prolog, OPS-5, and C which have been developed to provide UNIX help. These systems range from being menu-based to ones with natural language interfaces, some providing active help, intervening when they believe the user to have misconceptions, and some based on empirical studies of what users actually do while using UNIX. Further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do, and figuring out a way to do it, as well as representing the knowledge needed to do so. There is a significant focus on natural language dialogue where consultation systems can become active, incorporating user modelling, natural language generation and plan recognition, modelling metaphors, and users' mistaken beliefs. Much can be learned from seeing how AI and CS techniques can be investigated in depth while being applied to a real test-bed domain such as help on UNIX.

Pathology of Australian Native Wildlife brings together in one volume available information on the pathology of Australian native vertebrate wildlife, excluding fish. It provides rapid access to documented information on diseases in Australian wildlife, domiciled either in Australia or overseas. The book comprises 45 chapters, each detailing pathological changes caused by specific pathogens including viruses, bacteria, fungi, protozoa, helminths and ectoparasites, and other injurious agents and conditions such as toxins and neoplasia affecting terrestrial and marine mammals, birds, reptiles and amphibians. Although the aim is to describe morphological (gross and microscopic) changes, the author also indicates history and clinical signs, thus providing guidance as to which lesions should be specifically searched for, and what ancillary testing might be needed to confirm a diagnosis. Illustrated throughout with colour photographs, this will be the essential reference for veterinary pathologists and clinicians, as well as wildlife researchers, zoos, wildlife parks, environmentalists, conservationists and students. Awarded a 2010 Whitley Certificate of Commendation for Zoological Resource.

How did artificial intelligence become the most powerful technology on the planet? Sometime in the future the intelligence of machines will exceed that of human brain power. So are we on the edge of an AI-pocalypse, with superintelligent devices superseding humanity, as predicted by Stephen Hawking? Or will this herald a kind of Utopia, with machines doing a far better job at complex tasks than us? You might not realize it, but you interact with AIs every day. They route your phone calls, approve your credit card transactions and help your doctor interpret results. Driverless cars will soon be on the roads with a decision-making computer in charge. But how do machines actually think and learn? In *Machines That Think*, AI experts and *New Scientist* explore how artificial intelligence helps us understand human intelligence, machines that compose music and write stories - and ask if AI is really a threat.

Based off the popular podcast, this book collects one man's conversations with an outspoken social critic on the negative effects of the suburbs. James Howard Kunstler has been described as "one of the most outrageous commentators on the American built environment." An outspoken critic of suburban sprawl, Kunstler is often controversial and always provocative. The KunstlerCast is based on the popular weekly podcast of the same name, which features Kunstler in dialogue with author Duncan Crary, offering a personal window into Kunstler's worldview. Presented as a long-form conversational interview, *The KunstlerCast* revisits and updates all the major ideas contained in Kunstler's body of work, including: The need to rethink current sources of transportation and energy The failure of urban planning, architecture and industrial society America's plastic, dysfunctional culture The reality of peak oil Whether sitting in the studio, strolling city streets, visiting a suburban mall or even "Happy Motoring," the grim predictions Kunstler makes about America's prospects are leavened by his signature sharp wit and humor. This book is rounded out by commentary, footnotes and supplemental vignettes told from the perspective of an "embedded" reporter on the Kunstler beat. Readers may or may not agree with the more dystopian of Kunstler's visions. Regardless, *The KunstlerCast* is bound to inspire a great deal of thought, laughter, and hopefully, action. Praise for *The KunstlerCast* "A bracing dose of reality for an unreal world." —Stephen J. Dubner, co-author of *Freakonomics* and *SuperFreakonomics* "Erudite, eloquent . . . with good humor about the hilariously grotesque North American nightmare of car-addicted suburban sprawl." —Dmitry Orlov, author of *Reinventing Collapse* "Prepare to be enlightened, infuriated and amused." —Gregory Greene, Director, *The End of Suburbia* "So enlightening yet casual that the reader feels like they're eavesdropping into the den of Kunstler's prodigious mind." —Andrew D. Blechman, author of *Leisureville*

In an age of skepticism and disenchantment, people long for something that satisfies our mind's search for truth and our heart's desire for beauty and meaning. Stand Firm: Apologetics and the Brilliance of the Gospel argues that the gospel satisfies both of these needs. It is true and rational, but it is also inherently attractive and provides meaning and purpose. In short, the gospel is brilliant. It is brilliant, in one sense, because of the broad variety of evidences for its truth. But it is also brilliant given its beauty, goodness and the meaningful life it offers. The book provides up to date responses to questions about the existence of God, the reliability of the Bible, Jesus and the resurrection, and the problem of evil. It also treats unique topics such as understanding truth, knowledge and faith, the claims of alternate faiths, religious disagreement, etc. Each chapter attempts to connect these considerations with the gospel so that we may stand firm in our faith.
