

## South African Nursing Council Past Exam Papers

The midwife's role is examined in the community and family-health context in this handbook on effective maternal and newborn care for midwives and other healthcare providers. The skills, competencies, and knowledge required to make informed decisions about neo- and postnatal care are covered, including anatomy and the physiology of reproduction, high-risk pregnancies, and labor and birth. Theoretical and practical issues illuminate a midwife's role in the prevention of illness in mothers and babies, with attention to the unique challenges of midwifery in developing nations. Insights from current research studies and critical questions about midwife practice will help those new to health care understand the unique challenges of this form of health-service delivery.

This book is about seven African nurse pioneers in KwaZulu/Natal from 1920 to 2000. The author captures the early nursing activities of the 1920s to 1970 and then moves to nurses that entered the health services in the 1950s. The author also presents two nurses that worked outside South Africa i.e. did their pioneering nursing in Saudi Arabia and the United States of America. The author does not scoop nursing out of its context but creates a narrative that resonates in lived experiences in a world dominated by the Africanization of poverty, the feminization of poverty, globalization, racism and xenophobia.

**THE FIRST BOOK TO PRESENT THE SUCCESSES, CHALLENGES, AND OPPORTUNITIES OF GLOBAL HEALTH NURSING** This text is designed specifically for nurses and nursing students who have an interest in global health as a specialty, regardless of experience or education level. It reflects both the unique contributions of the nursing profession and of other disciplines, which is in keeping with the editors' perspective on how to bring about lasting change. The text views global health through a nursing lens, but maintains this awareness and appreciation of interprofessionalism throughout. The editors and contributors have firsthand experience of the complex dynamics in achieving global health, and bring a wealth of knowledge to this important field, which has grown as a course and specialty. The text depicts the worldwide expansion of nursing partnerships between resource-rich and resource-limited countries, discusses challenges and obstacles, and provides cases and guidance on how to achieve global health. It will appeal to all nurses, from student nurses embarking on a global health experience to more experienced global health nurses who offer professional nursing expertise from around the world. The text responds to a recent WHO mandate, which seeks the input of nurses and midwives as part of an interprofessional team of key strategists for facilitating global health. The Lancet report is also an important document used throughout the text, and an interview with Dr. Julio Frenk, author of that report, is included. Social, political, cultural, economic, and environmental factors—including climate change—are integrated into determinants of global health. The text covers the foundations of global health, including the emerging concept of climate justice, the ethical context of global health, and the importance of interprofessional education. It addresses key issues of global health with a focus on poor and vulnerable individuals—particularly women and children—and those living in areas of conflict. In addition to describing notable accomplishments toward achieving global health, the book focuses on the need for increasing access to primary care, improving clinical practice through expanded education, and engaging interdisciplinary researchers in discovery of viable solutions. The book includes the perspectives of nurses and colleagues from other disciplines in both resource-rich and resource-limited countries. References provide resources for additional study, and PowerPoint slides and a test bank for instructors accompany the text. **KEY FEATURES** Case studies depict real-world experiences Presents firsthand knowledge of global health dynamics, challenges, and opportunities Provides a wealth of information from multiple perspectives Authored by contributors across a variety of clinical and academic roles who are experienced in global health nursing and global

health Includes chapters written by nurses from both resource-limited and resource-rich countries

This is the first book to bring together examples of research in positive psychology / psychofortology conducted in the multi-cultural South African context with its diverse populations and settings. The volume reflects basic as well as applied well-being research in the multicultural South African context, as conducted in various contexts and with a variety of methods and foci. Theoretical, review, and empirical research contributions are made, reflecting positivist to constructivist approaches, and include quantitative, qualitative, and mixed-method approaches. Some findings support universality assumptions, but others uncovered unique cultural patterns. Chapters report on well-being research conducted in the domains of education, work, health, and family, and in clinical, urban vs. rural, and unicultural vs. multicultural contexts. Studies span the well-being of adolescents, adults, and older people, and topics include resilience in individuals, families, and groups, measurement issues and coping processes, the role of personal and contextual variables, and facets such as hope, spirituality, self-regulation, and interventions.

This handbook accommodates the South African Nursing Council's instructions and guidelines concerning the auxiliary nurse's training and scope of practice. The 11 chapters are split into several units, each unit focusing on a specific procedure or topic. Each unit starts with a statement of its educational aims, making it easier for the auxiliary nurse to carry out her/his tasks and for the educator to evaluate progress. The author cites reference sources at the end of each chapter to assist both the learner and the mentor. Explanatory illustrations accompany the straightforward and clearly written text.

The aim of this book is to better understand the phenomenon of HIV in a country that has faced the fullest might of the disease and yet, after first faltering, has made more progress than any other country in the world in its response to HIV. It aims to reflect the complexity of this narrative and the range of widely differing insights by featuring what is likely the largest number of contributors in a single publication on the subject in South Africa, as well as a full spectrum of specialised areas, ranging from high-end science to personal reflections.

This book explores the impacts of HIV/AIDS and neoliberal globalization on the occupational health of public sector hospital nurses in KwaZulu-Natal, South Africa. The story of South African public sector nurses provides multiple perspectives on the HIV/AIDS epidemic-for a workforce that played a role in the struggle against apartheid, women who deal with the burden of HIV/AIDS care at work and in the community, and a constituency of the new South African democracy that is working on the frontlines of the HIV/AIDS epidemic. Through case studies of three provincial hospitals in KwaZulu-Natal, set against a historical backdrop, this book tells the story of the HIV/AIDS epidemic in the post-apartheid period.

This work covers selected contemporary issues in nursing education and deals with the role of the nurse educator and that of the student, as well as with aspects of a dynamic teaching process. It is a source of principles and practical skills required by the nurse educator.

Ideal for all students studying first-level health services management, this invaluable all-in-one resource describes the environmental factors that affect health services, policy, and planning; the organization of services at the macro and micro level; and other issues such as staff absenteeism and management. There is a great need for qualified nurse educators in South Africa to enhance the quality of the development of student nurses, and therefore to enhance the quality of nursing care. This book applies didactics in theoretical, as well as clinical nursing education, using examples to illustrate the text.

Prepared under the auspices of the International Council of Nurses (ICN), this first volume provides a comprehensive overview of the rapidly emerging field of advanced nursing practice. It addresses central issues in the role and practice development that are fundamental to defining and differentiating the nature of this field. Topics include defining the role, role characteristics, scope of practice, education, regulation and research. Obstacles to and facilitators of that role are addressed and include ethical questions arising in the context of practice development. With an international focus, this volume examines international developments in the field, as reflected in country-specific case studies and examples. It offers a valuable resource for advanced practice nurses, educators and administrators at healthcare institutions.

In rural South African clinics, Black nurses were charged with administering life-saving health care measures despite a lack of equipment and personnel, often while navigating the intersections of traditional African healing practices and changing gender relations. *A Bold Profession* is an homage to their dedication to the well-being of their communities.

This edition, written as South Africa moves from expensive curative health care to a more people-focused primary health-care system, highlights transitional structures and bridges the gap between past and present. Part One focuses on the Government of National Unity and population development programmes, emphasising the role of community nurses in the primary health-care system. Subsequent sections cover factors playing an important role in community nursing, including housing, urbanisation and malnutrition. In accordance with the National Health-care Plan for South Africa, prominence is given to issues such as health education and maternal and child health care. The section on communicable diseases has been updated and takes into account changes in legislation and the latest statistical information. Primary health-care problems at community level are covered in depth. Students and practitioners will benefit from the wealth of information in this new edition.

The basics of fundamental and general nursing science are presented in this health resource for auxiliary, enrolled, and registered general nurses. A strong community nursing focus infuses the outcome-based teachings and questions to stimulate further discussion. Practical information on nursing in South Africa is provided, including working in the legal framework, managing the challenges of nursing in a culturally diverse society, and dealing with patients suffering from HIV and AIDS. Medical teachings on the use of oxygen, temperature regulation, mobility, and skin integrity complement the ethical discussions.

A CHOICE Outstanding Academic Title 2014! 2014 winner of the American Association for the History of Nursing's Mary M. Roberts Award for Exemplary Historical Research and Writing! The Routledge Handbook on the Global History of Nursing brings together leading scholars and scholarship to capture the state of the art and science of nursing history, as a generation of researchers turn to the history of nursing with new paradigms and methodological tools. Inviting

readers to consider new understandings of the historical work and worth of nursing in a larger global context, this ground-breaking volume illuminates how research into the history of nursing moves us away from a reductionist focus on diseases and treatments and towards more inclusive ideas about the experiences of illnesses on individuals, families, communities, voluntary organizations, and states at the bedside and across the globe. An extended introduction by the editors provides an overview and analyzes the key themes involved in the transmission of ideas about the care of the sick. Organized into four parts, and addressing nursing around the globe, it covers: New directions in the history of nursing; New methodological approaches; The politics of nursing knowledge; Nursing and its relationship to social practice. Exploring themes of people, practice, politics and places, this cutting edge volume brings together the best of nursing history scholarship, and is a vital reference for all researchers in the field, and is also relevant to those studying on nursing history and health policy courses.

Aimed at the registered nurse, this handbook addresses the important but oft-neglected subject of record keeping and provides concise, relevant information on ways to improve and maintain standards within the health care institution. Most of the 13 essays presented here were originally presented at the January 1997 "Gender and Colonialism" conference held at the U. of Western Cape (South Africa). Presented by Woodward (English and cultural studies, U. of the Western Cape), Hayes (history, U. of the Western Cape), and Minkley (history, U. of the Western Cape), the contributions address both colonial and postcolonial issues of identity in Southern Africa from a variety of perspectives within contemporary critical and feminist theories. Topics include slave women's rhetoric and the Eastern Cape courts, ideologies of domesticity and the British construction of the "primitive," Dutch- Afrikaans women's entry into the public sphere in the Cape Colony, male nursing in the mines of 20th-century South Africa, and "gender- blending" and "code-switching" in the South African novel. This is the first series to comprehensively address leading qualitative research designs and methods from a nursing perspective, and is a must-have for every research library. These are practical, how-to guides to conducting research using seven different qualitative designs that encompass new and traditional methodologies. Written by Dr. Mary de Chesnay, a noted qualitative research scholar, and contributing specialists in each of the qualitative methods, each of the seven books discusses the theoretical rationale for using a particular design, describes its components, and delineates a practical plan to conduct studies. Utilizing a practical, problem-solving approach, the books delineate appropriate methods, ethical considerations, critical issues, and potential pitfalls. Examples of published qualitative nursing research worldwide, along with author commentary, support the new researcher in making decisions and facing challenges. Case studies follow a template that includes a description of the study, data collection

and analysis, and dissemination. Also included are techniques whereby researchers can ensure high standards of rigor, and an extensive bibliography and list of resources. The book's practical point of view is geared to help novice researchers and specialists alike develop or expand their competencies, engage graduate faculty and students, and aid nursing research staff in larger hospitals and other healthcare institutions, as well as in-service educators and students. Key Features of this One-of-a-Kind Resource Library: Focuses on practical problem solving Reviews the philosophical basis for each qualitative design Disseminates the most current references in each design Provides a plan to conduct studies using the design and discusses appropriate methods, ethical considerations, and potential challenges Showcases the research of international scholars Is peer reviewed by design and method experts

In an era of globalization, population growth, and displacements, migration is now a fact of life in a constantly shifting economic and political world order. This book contributes to the discourse on the beneficiaries, benefactors, and the casualties of African displacement. While the few existing studies have emphasized economic motivation as the primary factor triggering African migration, this volume treats a range of issues: economic, socio-political, pedagogical, developmental, and cultural. Organized with a multidisciplinary thrust in mind, this book argues that any discussion of African migration, whether internal or external, must be conceived as only one aspect of a more complex, organic, and global patterning of "flux and reflux" necessitated by constantly shifting dynamics of world socio-economic, cultural, and political order.

This volume provides the first detailed overview of the growing phenomenon of the international migration of skilled health workers. The contributors focus on who migrates, why they migrate, what the outcomes are for them and their extended families, what their experiences in the workforce are, and ultimately, the extent to which this expanding migration flow has a relationship to development issues. It therefore provides new, interdisciplinary reflections on such core issues as brain drain, gender roles, remittances and sustainable development at a time when there has never been greater interest in the migration of health workers.

Until now assessors have not had the material they need to guide them through the process of assessing prior learning. Malcolm Day brings together the experience of specialists in this field from Canada, the US and South Africa where this has been a major part of education since the 1970s. This is an interactive text, which helps develop anyone undertaking Assessment of Prior Learning in nursing, allied health care and social care. A glossary of vocabulary associated with prior learning assessment is included.

A quiet revolution has been sweeping through the writing of nursing history over the last decade, transforming it into a robust and reflective area of scholarship. Nursing History and the Politics of Welfare highlights the significant contribution that researching nursing history has to make in settling a new intellectual and

political agenda for nurses. The seventeen international contributors to this book look at nursing from different perspectives, as it has developed under different regimes and ideologies and at different times, in America, Australia, Britain, Germany, India, The Phillipines and South Africa. They highlight the role of politics and gender in understanding nursing history and propose strategies for achieving greater recognition for nursing, and bringing it into line with other related health care professions.

The Auxiliary Nurse's Guide Juta and Company Ltd

"The South African nursing experience over 90 years has been adequately documented and may be found on the shelves of public libraries, university libraries and hospital libraries as well as between the pages of "struggle literature" such as Critical Health. This book does not attempt academic analysis per se, rather is it an authentic oral and written account of the experiences, which shaped the careers of black nurses. The sample of respondents was picked at random across the country, as time and private purse allowed. They were assured anonymity in that only first or nicknames would be used as a rule, except where a surname carries historical significance. In 1994, when the winds of changes blew democracy across the political landscape, the South African nursing profession too was gusted along the road of revolution. It was no longer a question of whether change would come, but when. Nonceba Lubanga in her chapter "Nursing in South Africa" has been given a detailed account of the struggle of black nurses, referring to them as "the unsung heroes of the African struggle in South Africa."--P. [4] of cover.

This is a concise, step-by-step guide to conducting qualitative nursing research using various forms of data analysis. It is part of a unique series of books devoted to seven different qualitative designs and methods in nursing, written for both novice researchers and specialists seeking to develop or expand their competency. This practical resource encompasses such methodologies as content analysis, a means of organizing and interpreting data to elicit themes and concepts; discourse analysis, used to analyze language to understand social or historical context; narrative analysis, in which the researcher seeks to understand human experience through participant stories; and focus groups and case studies, used to understand the consensus of a group or the experience of an individual and his or her reaction to a difficult situation such as disease or trauma. Written by a noted qualitative research scholar and contributing experts, the book describes the philosophical basis for conducting research using data analysis and delivers an in-depth plan for applying its methodologies to a particular study, including appropriate methods, ethical considerations, and potential challenges. It presents practical strategies for solving problems related to the conduct of research using the various forms of data analysis and presents a rich array of case examples from published nursing research. These include author analyses to support readers in decision making regarding their own projects. The book embraces such varied topics as data security in qualitative research, the image of

nursing in science fiction literature, the trajectory of research in several nursing studies throughout Africa, and many others. Focused on the needs of both novice researchers and specialists, it will be of value to health institution research divisions, in-service educators and students, and graduate nursing educators and students. Key Features: Explains how to conduct nursing research using content analysis, discourse analysis, narrative analysis, and focus groups and case studies Presents state-of-the-art designs and protocols Focuses on solving practical problems related to the conduct of research Features rich nursing exemplars in a variety of health/mental health clinical settings in the United States and internationally

Completely updated to include the latest developments in the field of Nursing Science, this second edition covers the topics required for both Fundamental and General Nursing Science; this makes it suitable for the categories of Nursing Auxiliary, Staff Nurse and for the fundamentals of nursing for Professional Nurses. The manual has a strong community-based focus. It introduces the nurse to the fundamentals of nursing and is extremely practical, encouraging problem solving both in the clinic and in the community. Each chapter has tutorial-type questions to stimulate discussion and personal research. Key Features: This updated edition includes a chapter on the important topic of Informatics; The text is outcomes-based so that students understand the focus of each chapter; Numerous line drawings expand on difficult concepts; It covers the new curriculum; therefore lecturers can be assured the book will meet their needs; Summaries of key ethical and legal considerations in each chapter highlight these important aspects; The content encourages the development of problem-solving skills so that the nurse can deal with problems as they arise in the community/clinic environment; Self-assessment and discussion topics throughout the text test what has been learnt.

This title is directed primarily towards health care professionals outside of the United States. THE NURSING PROCESS; A GLOBAL CONCEPT critically explores a concept that was introduced into nursing in the 1970s and rapidly spread all over the world. It begins with the background and history of the Nursing Process, and analyses its use in various fields, such as managerial technologies and psychiatric nursing. It then goes on to look at its use in six different countries from a variety of world regions - in Europe, Finland, Germany and the Czech Republic, as well as South Africa, Australia and the Caribbean. It explores its strengths and weaknesses, and tries to make some predictions about future use. The book combines descriptions of the state-of-the-art based on extensive literature surveys, as well as analytical approaches. It creates opportunities for comparison, especially with regard to problem-solving strategies. Combines diverse perspectives of the core concept and its use Provides international overviews as well as detailed country reports Based on extensive literature surveys as well as analytical approaches Creates opportunities for comparison especially with regard to problem-solving strategies

The two-volume "Manual of Nursing" is a comprehensive and up-to-date work on the nursing profession in South Africa. It covers the whole nursing curriculum and broadens the student's scope of knowledge by discussing subjects not included in midwifery, critical care nursing, community nursing and psychiatric nursing. Easy referencing ensures that the set (encapsulating the integrated nursing course) is of immediate and practical use. This work discusses medical and surgical conditions from a nursing perspective. Volume One introduces certain basics of nursing theory and practice and it includes a section dealing with nursing-related services.

Nursing and Informatics for the 21st Century is the follow-up to the highly successful, award-winning first edition. Published in 2006, the first edition was a critical resource in chronicling the huge historical shift in nursing linked to the explosion of EHR national strategies and health policies around the globe. This updated edition, co-published by AMIA, examines the revolution that has occurred in nursing and explores the role IT is playing in this transformation, with a thoughtful examination of nursing practice, science and research, and education across the globe. With nearly 50 case studies written by nursing's leading innovators and recognized leaders across specific segments of the healthcare industry and the globe, the book presents a "snapshot" of nursing and IT adoption worldwide. The book provides in-depth analysis of nursing developments in the United States and an expanded global focus, including profiles of EHR initiatives in the Middle East and Asia. In addition, new topics in this second edition include nursing faculty development and results of a five-country international survey on nursing clinical documentations.

This book focuses on ethical issues faced by a variety of healthcare practitioners across the Anglophone African continent. This important resource contains in-depth discussions of the most salient current ethical issues by experts in various healthcare fields. Each profession is described from both an African and a South African perspective, and thus contributes to dialogue and critical thinking around African ethics and decision-making. In this way the book provides readers with an understanding of the ethical issues at hand in various professions, including the practical implications of the ethical issues and how to address those effectively. This is a beneficial resource for all those involved in the various healthcare professions addressed in this book, including undergraduate students, lecturers, researchers and practitioners across the continent. Simply put, with the dynamic changes and challenges in healthcare across the globe and in Africa, this is an indispensable resource for healthcare practitioners.

"The Auxiliary Nurse" covers the entire curriculum for learners preparing to write the South African Nursing Council (SANC) examination. Arranged in learning units, the book uses an outcomes based educational strategy to guide both learners and lecturers to essential information. This richly illustrated text has sections on the history of nursing, anatomy and physiology, basic nursing, food and nutrition, first aid and comprehensive health care, which has a strong

emphasis on community nursing.

This book contests the negative portrayal of African immigrants as people who are not valuable members of South African society. They are often perceived as a threat to South Africa and its patrimony, accused of committing crime, taking jobs and competing for resources with South African citizens. Unique in its deployment of a deconstructionist theoretical and analytical framework, this work argues that this is a simplistic portrayal of a complex reality. Inocent Moyo lays bare, not only the failings of an exclusivist narrative of belonging, but also a complex social reality around migration and immigration politics, belonging and exclusion in contemporary South Africa. Over seven chapters he introduces new perspectives on the negative portrayal of African immigrants and argues that to sustain a negative view of them as the 'threatening other' ignores complex people-place-space dynamics. For these reasons, the analytical, empirical and theoretical value of the project is that it broadens the study of migration related contexts in a South African setting. Academics, students, policy makers and activists focusing on the migration and immigration debate will find this book invaluable.
