It chronicles the use of AT/AD - technology used by individuals with disabilities to perform functions that might otherwise be difficult or impossible. In general, AT can include mobility devices such as walkers and wheelchairs, as well as hardware, software, and peripherals that assist people with disabilities in accessing computers or other information technologies. Advanced AT has coincided with the advent of personal electronic devices that could be customized for use, such as computers and smart phones. For people with disabilities, AT includes simple gadgets for the home and office, electronic gadgets and complex computer systems for the workplace, mobility aids and accessible vans for getting around and modified equipment for lifestyle needs, such as talking ATMs and strobe light alarm systems. This book empowers people with disabilities to use assistive technologies to overcome some of their physical or mental limitations and have a more equal playing field. It includes real-life examples about how people with disabilities are using assistive technology (AT) to assist them in daily tasks, and discusses emotional issues related to AT/AD. The digital revolution is in full force but many public and private sector leaders are stymied: How can they maximize the full potential of digital technology? This hesitancy puts a brake on the transformational power of digital technology and means private companies and governmental bodies fall well behind other digital pioneers. Darrell West focuses on the next wave of technologies and how they can further enhance U.S. social and political innovation. West champions exploiting technological advances to help organizations become faster, smarter, and more efficient. Consumers can deploy new digital technology to improve health care, gain access to education, learn from the news media, and check public sector performance. New storage platforms such as high-speed broadband, mobile communications, and cloud computing enable and improve both social and economic development. However, to gain these benefits, policymakers must recognize the legitimacy of public fears about technology and the privacy and security dangers posed by the Internet. Their goal must be to further innovation and investment while also protecting basic social and individual values. West argues that digital technology innovation is consistent in many ways with personal and social values; people can deploy digital technology to improve participation

and collaboration, and political leaders can work with the private sector to stimulate a flowering of innovation in a variety of policy areas.
