Polyphenols are a heterogeneous group of bioactive compounds mainly found in plant-based foods. Numerous clinical and epidemiological studies have led to the result that polyphenol intake may protect against chronic diseases such as cardiovascular and neurodegenerative diseases, cancer, or type 2 diabetes, to name some. Polyphenol intake estimation can be obtained through food frequency questionnaires and nutritional biomarkers, both having their own advantages and disadvantages. Although the association between these bioactive compounds and health seems irrefutable, many questions remain still unanswered. For instance, more studies are needed to identify possible interactions and effect-modulating variables, such as smoking habit, body mass index, sex, alcohol, hormones, other foods, etc. Moreover, intestinal microbiota seems to play an important role in the metabolism of polyphenols, but it is still unclear how.

This book focuses on central themes related to the conservation of bats. It details their response to land-use change and management practices, intensified urbanization and roost disturbance and loss. Increasing interactions between humans and bats as a result of hunting, disease relationships, occupation of human dwellings, and conflict over fruit crops are explored in depth. Finally, contributors highlight the roles that taxonomy, conservation networks and conservation psychology have to play in conserving this imperilled but vital taxon. With over 1300 species, bats are the second largest order of mammals, yet as the Anthropocene dawns, bat populations around the world are in decline. Greater understanding of the anthropogenic drivers of this decline and exploration of possible mitigation measures are urgently needed if we are to retain global bat diversity in the coming decades. This book brings together teams of international experts to provide a global review of current understanding and recommend directions for future research and mitigation.

highlights the dynamism and conflict inherent in the history of the United States, while also looking for the common threads that help us make sense of the past. Without losing sight of politics and power, *The American Yawp* incorporates transnational perspectives, integrates diverse voices, recovers narratives of resistance, and explores the complex process of cultural creation. It looks for America in crowded slave cabins, bustling markets, congested tenements, and marbled halls. It navigates between maternity wards, prisons, streets, bars, and boardrooms. The fully peer-reviewed edition of *The American Yawp* will be available in two print volumes designed for the U.S. history survey. Volume II opens in the Gilded Age, before moving through the twentieth century as the country reckoned with economic crises, world wars, and social, cultural, and political upheaval at home. Bringing the narrative up to the present, *The American Yawp* enables students to ask their own questions about how the past informs the problems and opportunities we confront today.

This two-volume set of LNCS 12489 and 12490 constitutes the thoroughly refereed conference proceedings of the 21th International Conference on Intelligent Data Engineering and Automated Learning, IDEAL 2020, held in Guimaraes, Portugal, in November 2020.\* The 93 papers presented were carefully reviewed and selected from 134 submissions. These papers provided a timely sample of the latest advances in data engineering and machine learning, from methodologies, frameworks, and algorithms to applications. The core themes of IDEAL 2020 include big data challenges, machine learning, data mining, information retrieval and management, bio-/neuro-informatics, bio-inspired models, agents and hybrid intelligent systems, real-world applications of intelligent techniques and AI. \* The conference was held virtually due to the COVID-19 pandemic.

The book analyzes the complex relationship between languages in the bilingual mind with a focus on motion event typology and the acquisition of Spanish as a second language (L2). The author starts out by examining L1 patterns which are transferred to less complex L2 systems. The data discussed was elicited by German learners of Spanish. A similar transfer is observed when L1 is typologically and genetically close, as in the case of French and Italian learners of Spanish. Furthermore, the author clarifies the relevance of intra-typological differences within the same linguistic family, including important differences in the lexicalization patterns of Italian with respect to French and Spanish. The findings contribute to our understanding of the field of motion event typology and thinking-for-speaking. The book demonstrates that conceptual transfer is present in different aspects of the motion lexicalization domain. Interestingly, there are some challenging aspects both for speakers whose first language is typologically different and for those whose language is typologically close. The book offers suggestions on how these challenges in the restructuring of meaning in L2 can be addressed in language teaching. Specifically, pedagogical translation and mediation present promising pathways to the strengthening of semantic competences in the L2.

Egyptologist Jack A. Josephson, a writer and researcher in the tradition of the gentleman scholar, has achieved broad recognition as an authority in Egyptian art history. His lucid investigative analyses have probed and redefined the limits of inquiry, expanded research parameters, and broadened perspectives, emphasizing the undeniable contributions of art history in an intra-disciplinary framework. This volume of collected essays is dedicated to Josephson by distinguished friends and colleagues, a select roster including eminent, established scholars in the field of Egyptology and rising stars of the younger generation. Josephson views Egyptian art history as a critical but neglected area of study, and is a strong proponent of its reinstatement in the academic curriculum as an essential component in the formation of new cadres. The quality of the articles in this Egyptological medley is a tribute to the honoree and an affirmation of the esteem of his peers, while the range of subjects and variety of themes addressed reflect the degree to which he has, in his own scholarship, undertaken to implement his ideal.

Few places in the world can claim such a diversity of species as the Gulf of California (Sea of Cortez), with its 6,000

recorded animal species estimated to be half the number actually living in its waters. So rich are the Gulf's water that over a half-million tons of seafood are taken from them annually—and this figure does not count the wasted by-catch, which would triple or quadruple that tonnage. This timely book provides a benchmark for understanding the Gulf's extraordinary diversity, how it is threatened, and in what ways it is—or should be—protected. In spite of its dazzling richness, most of the Gulf's coastline now harbors but a pale shadow of the diversity that existed just a half-century ago.

Recommendations based on sound, careful science must guide Mexico in moving forward to protect the Gulf of California. This edited volume contains contributions by twenty-four Gulf of California experts, from both sides of the U.S.-Mexico border. From the origins of the Gulf to its physical and chemical characteristics, from urgently needed conservation alternatives for fisheries and the entire Gulf ecosystem to information about its invertebrates, fishes, cetaceans, and sea turtles, this thought-provoking book provides new insights and clear paths to achieve sustainable use solidly based on robust science. The interdisciplinary, international cooperation involved in creating this much-needed collection provides a model for achieving success in answering critically important questions about a precious but rapidly disappearing ecological treasure.

Astrocytes can be defined as the glia inhabiting the nervous system with the main function in the maintenance of nervous tissue homeostasis. Classified into several types according to their morphological appearance, many of astrocytes form a reticular structure known as astroglial syncytium, owing to their coupling via intercellular channels organized into gap junctions. Not only do astrocytes establish such homocellular contacts, but they also engage in intimate heterocellular interactions with neurons, most notably at synaptic sites. As

synaptic structures house the very core of information transfer and processing in the nervous system, astroglial perisynaptic positioning assures that these glial cells can nourish neurons and establish bidirectional communication with them, functions outlined in the concepts of the astrocytic cradle and multi-partite synapse, respectively. Astrocytes possess a rich assortment of ligand receptors, ion and water channels, and ion and ligand transporters, which collectively contribute to astrocytic control of homeostasis and excitability. Astroglia control glutamate and adenosine homeostasis to exert modulatory actions affecting the real-time operation of synapses. Fluctuations of intracellular calcium can lead to the release of various chemical transmitters from astrocytes through a process termed gliotransmission. Sodium fluctuations are closely associated to those of calcium with both dynamic events interfacing signaling and metabolism. Astrocytes appear fully integrated into the brain cellular circuitry, being an indispensable part of neural networks. Emerging evidence indicates that dairy foods and ingredients can influence human health. There is increasing interest around the specific role that particular components within dairy foods, such as fat, protein, and other bioactives, play in health. Dairy fat, although a source of saturated fat, may have neutral or beneficial effects on cardiometabolic and gut health. Further, specific types of fat within dairy fat have been linked with improved metabolic health and immune function, while the amount of milk fat globule membrane enclosing the fat may be important in cardiac and muscular outcomes. Dairy proteins may assist in maintaining skeletal muscle mass, particularly post-exercise. While research into individual dairy components is ongoing, the overall dairy food matrix may offer unique benefits to human health as well. For

Recent years have witnessed a resurgence of biological research into the causes of crime, but the origins of this kind of research date back to the late nineteenth century. Here, Richard Wetzell presents the first history of German criminology from Imperial Germany through the Weimar Republic to the end of the Third Reich, a period that provided a unique test case for the perils associated with biological explanations of crime. Drawing on a wealth of primary sources from criminological, legal, and psychiatric literature, Wetzell shows that German biomedical research on crime predominated over sociological research and thus contributed to the rise of the eugenics movement and the eventual targeting of criminals for eugenic measures by the Nazi regime. However, he also demonstrates that the development of German criminology was characterized by a constant tension between the criminologists' hereditarian biases and an increasing methodological sophistication that prevented many of them from endorsing the crude genetic determinism and racism that characterized so much of Hitler's regime. As a result, proposals for the sterilization of criminals remained highly controversial during the Nazi years, suggesting that Nazi biological politics left more room for contention than has often been assumed.

Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and

patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

Draws together over two decades of research by the author into activism and legal pluralism as practiced and understood by Indigenous women in Latin American countries, analyzing the struggles of indigenous women in Mexico, Guatemala, and Colombia to secure justice and equal rights. The ethnographic approach taken in the book analyzes activism and legal pluralism at the local, state, and international scales and synthesizes the author's experiences interacting with activists at those different levels. The manuscript draws on critical discourse and feminist theories to address the tensions and struggles indigenous women activists face in Latin America.

American colonies had achieved emancipation from European rule. In this groundbreaking history, David Sartorius explores the relationship between political allegiance and race in nineteenth-century Cuba. Challenging assumptions that loyalty to the Spanish empire was the exclusive province of the white Cuban elite, he examines the free and enslaved people of African descent who actively supported colonialism. By claiming loyalty, many black and mulatto Cubans attained some degree of social mobility, legal freedom, and political inclusion in a world where hierarchy and inequality were the fundamental lineaments of colonial subjectivity. Sartorius explores Cuba's battlefields, plantations, and meeting halls to consider the goals and limits of loyalty. In the process, he makes a bold call for fresh perspectives on imperial ideologies of race and on the rich political history of the African diaspora. This comprehensive title is among the first to extensively use newly released 2010 U.S. Census data to examine multiculturalism today and tomorrow in America. This distinction is important considering the following NPR report by Eyder Peralta: "Based on the first national numbers released by the Census Bureau, the AP reports that minorities account for 90 percent of the total U.S. growth since 2000, due to immigration and higher birth rates for Latinos." According to John Logan, a Brown University sociologist who has analyzed most of the census

figures, “The futures of most metropolitan areas in the country are contingent on how attractive they are to Hispanic and Asian populations.” Both non-Hispanic whites and blacks are getting older as a group. “These groups are tending to fade out,” he added. Another demographer, William H. Frey with the Brookings Institution, told *The Washington Post* that this has been a pivotal decade. “We’re pivoting from a white-black-dominated American population to one that is multiracial and multicultural.”

*Multicultural America: A Multimedia Encyclopedia* explores this pivotal moment and its ramifications with more than 900 signed entries not just providing a compilation of specific ethnic groups and their histories but also covering the full spectrum of issues flowing from the increasingly multicultural canvas that is America today. Pedagogical elements include an introduction, a thematic reader’s guide, a chronology of multicultural milestones, a glossary, a resource guide to key books, journals, and Internet sites, and an appendix of 2010 U.S. Census Data. Finally, the electronic version will be the only reference work on this topic to augment written entries with multimedia for today’s students, with 100 videos (with transcripts) from Getty Images and Video Vault, the Agence France Press, and Sky News, as reviewed by the media librarian of the Rutgers University Libraries, working in concert with the title’s editors.

The past few years have seen an unexpected resurgence of street-level protest movements around the world, from the uprisings of the Arab Spring to the rise of the anti-austerity Indignados in Spain and Greece to the global spread of the Occupy movement. This collection is designed to offer a comparative analysis of these movements, setting them in international, socio-economic, and cross-cultural perspective in order to help us understand why movements emerge, what they do, how they spread, and how they fit into both local and worldwide historical contexts. As the most significant wave of mass protests in decades continues apace, this book offers an authoritative analysis that could not be more timely.

The author has undertaken systematic research, employing comparative linguistic methodology and field interviews, for a history-of-ideas/religions and epistemologies explication of translated SIL missionary linguistic New Testaments and its premeditated impact upon religions, languages, sociopolitical institutions, and cultures. In addition to taking into account the history of missionary linguistics in America and theological principles of SIL/WBT, the author has examined the intended cultural transformative effects of Bible translations upon cognitive and linguistic systems. A theoretical analytic model of conversion and translation has been put forward for comparative research of religion, ideology, and knowledge systems.

This volume explores the complex relationship between primary agreement by means of object marking or differential object marking (DOM), and secondary agreement through clitics in non-standardized variation data from Limeño Spanish contact varieties (LSCV). As such it is concerned with diachronic as well as synchronic morphosyntactic variation of the third person object pronoun paradigm, so called clitics, as used in Standard Spanish and non-standardized Spanish contact dialects. The argumentation as well as the data presented cross diachronic and synchronic boundaries. Many macro and micro species, from terrestrial and aquatic environments, produce structurally unique compounds and, in many countries, still are the primary sources of medicines. In fact, secondary metabolites are

an important source of chemotherapeutic agents but are also lead compounds for synthetic modification and the optimization of biological activity. Therefore, the exploitation of secondary metabolites, or their inspired synthetic compounds, offers excellent opportunities for the pharmaceutical industry. This Medicines Special Issue focuses on the great potential of secondary metabolites for therapeutic application. The Special Issue contains 16 articles reporting relevant experimental results, and an overview of bioactive secondary metabolites, their biological effects, and new methodologies that improve and accelerate the process of obtained lead compounds with regard to new drug development. We would like to thank all 83 authors, from all over the world, for their valuable contributions to this Special Issue.
