Author Stan Tenen demonstrates that each letter is also a hand gesture, and it is at this level that Hebrew forms a natural universal language. All people, including children before they speak and people without sight, make natural use of these gestures. In The Alphabet That Changed the World, Tenen examines the Hebrew text of

Genesis and its relationship to the alphabet. He shows how each letter is both concept and gesture, with the form of the gesture matching the function of the concept. There is thus an implicit relationship between the physical world of function and the conscious world of concept. Using over 200 color illustrations, Tenen demonstrates geometric metaphor as the best framework for understanding the deepest meaning of the text. Such geometry models embryonic growth and self-organization and the core of many healing and meditative practices. Many subjects in contemporary science were derived from the methods and means available to the ancients; The Alphabet That Changed the World makes this authoritative recovery of the “science of consciousness” in Genesis accessible for the first time to the contemporary reading public.

The rise and fall of identical copies: digital technologies and form-making from mass customization to mass collaboration. Digital technologies have changed architecture—the way it is taught, practiced, managed, and regulated. But if the digital has created a “paradigm shift” for architecture, which paradigm is shifting? In *The Alphabet and the Algorithm*, Mario Carpo points to one key practice of modernity: the making of identical copies. Carpo highlights two examples of identity crucial to the shaping of architectural modernity: in the fifteenth century, Leon Battista Alberti's invention of architectural design, according to which a building is an identical copy of the architect's design; and, in the nineteenth and twentieth centuries, the mass production of identical copies from mechanical master models, matrixes, imprints, or molds. The modern power of the identical, Carpo argues, came to an end with the rise of digital technologies. Everything digital is variable.

In architecture, this means the end of notational limitations, of mechanical standardization, and of the Albertian, authorial way of building by design.

Charting the rise and fall of the paradigm of identity, Carpo compares new forms of postindustrial digital craftsmanship to hand-making and the cultures and technologies of variations that existed before the coming of machine-made, identical copies. Carpo reviews the unfolding of digitally based design and construction from the early 1990s to the present, and suggests a new agenda for architecture in an age of variable objects and of generic and participatory authorship.

Missing Letters is not a typical alphabet book-it's a word game that teaches the importance of each letter by illustrating what happens when they're removed from words. The results are surprising as words and meaning are transformed. It can be dramatic as Will becomes ill and play becomes pay, or it can be funny when peaks become peas and banana becomes 'baaa'. Lively illustrations and a diverse cast of characters accentuate the changes, helping children increase their phonemic awareness-the ability to hear sounds not only in the starts of words but also in the middle or end. Missing Letters can also extend beyond the pages by thinking of your own words that change when you remove a letter. It's accessible to children of any age. Young pre-readers can focus on the missing sounds and compare the illustrations, while early readers can look at the spellings to spot the difference.
