

## The Better Angels Of Our Nature The Decline Of Violence In History And Its Causes

Reasoning is the critical thinking skill concerned with the production of arguments: making them coherent, consistent, and well-supported; and responding to opposing positions where necessary. The Better Angels of Our Nature offers a step-by-step class in precisely these skills. Author Steven Pinker's central thesis is simple: mankind has become increasingly less violent over the centuries, and will continue to do so. Pinker is aware, though, that many people instinctively believe the opposite, and Better Angels is devoted to marshalling data to support and illustrate this central argument, as well as a series of secondary arguments about how and why humanity has become less violent. Pinker's interpretative skills – understanding the meaning of the complex evidence from history – are also on display throughout, as he tackles the ambiguities of his data, the problems it presents, and the viable inferences one can draw from it.

"Pinker has a lot of ideas and sometimes controversial opinions about writing and in this entertaining and instructive book he rethinks the usage guide for the 21st century. Don't blame the internet, he says, good writing has always been hard. It requires imagination, taking pleasure in reading, overcoming the difficult we all have in imagining what it's like to not know something we do know."--Publisher information.

"In recent years, psychological scientists' narrow focus on negative emotions and antisocial behavior has broadened to include a panoply of positive emotions such as empathy, compassion, gratitude, and forgiveness and a new emphasis on prosocial, generous, altruistic behavior. At the same time, neuroscientists, primatologists, and evolutionary biologists have begun to identify the evolutionary and neurological roots of prosocial feelings and actions. Research shows that human beings have an innate capacity for prosocial behavior, but the inclinations underlying such behavior can be inhibited or overpowered in selfish, neurotic, or culturally engrained attitudes and values. Genes, personality, past social experiences, social and cultural identities, and contextual factors can all influence the degree to which human behavior is empathic and generous or cruel, vindictive, and destructive. Prosocial Motives, Emotions, and Behavior, with a subtitle borrowed from an inaugural address In Abraham Lincoln, is a comprehensive examination of the interplay of these influences. Part I considers theoretical perspectives on prosocial behavior; Part II illuminates the psychological processes that underlie prosocial behavior; Part III focuses on specific emotions such as compassionate love, gratitude, and forgiveness; Part IV examines prosocial behavior between individuals at the dyadic level; and Part V investigates prosocial behavior at the societal level, with an emphasis on solving intractable conflicts and achieving desirable social change. This stimulating, wide-ranging volume is sure to be of great interest to psychologists, social scientists, and anyone with an interest in understanding and fostering prosocial behavior"--Jacket. Faced with the ceaseless stream of news about war, crime, and terrorism, one could easily think this is the most violent age ever seen. Yet as bestselling author Pinker shows in this startling and engaging new work, just the opposite is true: violence has been diminishing for millennia and this may be the most peaceful time in mankind's existence.

This book explores, through an ethnographic examination of life stories of wealthy men, a historical analysis of the moral meanings of wealth and power in Western capitalism, and a mapping of different symbolic spaces in contemporary American culture.

NEW YORK TIMES BESTSELLER "In our uncertain age, which can so often feel so dark and disturbing, Steven Pinker has distinguished himself as a voice of positivity." – New York Times Can reading a book make you more rational? Can it help us understand why there is so much irrationality in the world? Steven Pinker, author of Enlightenment Now (Bill Gates's "new favorite book of all time") answers all the questions here Today humanity is reaching new heights of scientific understanding--and also appears to be losing its mind. How can a species that developed vaccines for Covid-19 in less than a year produce so much fake news, medical quackery, and conspiracy theorizing? Pinker rejects the cynical cliché that humans are simply irrational--cavemen out of time saddled with biases, fallacies, and illusions. After all, we discovered the laws of nature, lengthened and enriched our lives, and set out the benchmarks for rationality itself. We actually think in ways that are sensible in the low-tech contexts in which we spend most of our lives, but fail to take advantage of the powerful tools of reasoning we've discovered over the millennia: logic, critical thinking, probability, correlation and causation, and optimal ways to update beliefs and commit to choices individually and with others. These tools are not a standard part of our education, and have never been presented clearly and entertainingly in a single book--until now. Rationality also explores its opposite: how the rational pursuit of self-interest, sectarian solidarity, and uplifting mythology can add up to crippling irrationality in a society. Collective rationality depends on norms that are explicitly designed to promote objectivity and truth. Rationality matters. It leads to better choices in our lives and in the public sphere, and is the ultimate driver of social justice and moral progress. Brimming with Pinker's customary insight and humor, Rationality will enlighten, inspire, and empower.

The lives and relationships of five very different people are transformed by the discovery of a mysterious, ancient, alien artifact that resembles an angel's shoulder blade Believe it or not, today we may be living in the most peaceful time in our species' history. In this epic exploration of the human condition, Steven Pinker shows that, despite the constant stream of news about war, crime and terrorism, violence of all kinds has been decreasing. Barbaric practices such as human sacrifice, torture-executions and chattel slavery have been abolished; rates of death from war and homicide are dramatically down; and brutality towards minorities, women, children and animals is in steady decline. Weaving together psychology and history, science and popular culture, The Better Angles of Our Nature reinvigorates the ideals of modernity, progress and enlightenment. 'His book will change the way you see the world . . . Pinker's powerful ideas, vivid stories and sparkling prose make this hard to put down.' Daily Mail 'May prove to be one of the great books of our time . . . he writes like an angel.' Economist 'Masterly, a supremely important book . . . For anyone interested in human nature, it is engrossing.' The New York Times 'Marvellous . . . riveting and myth-destroying.' New Statesman 'A marvellous synthesis of science, history and storytelling, written in Pinker's distinctively entertaining and clear personal style . . . I was astonished by the extent to which violence has declined in every shape, form and scale.' Financial Times 'An outstanding fruitful read, with fascinating nuggets on almost every page.' Inspiring and insightful, Our Better Angels: Seven Simple Virtues That Will Change Your Life and the World celebrates the shared principles that unite and enable us to overcome life's challenges together. "When the waters rise, so do our better angels."—President Jimmy Carter Jonathan Reckford, the CEO of Habitat for Humanity, has seen time and again the powerful benefits that arise when people from all

walks of life work together to help one another. In this uplifting book, he shares true stories of people involved with Habitat as volunteers and future homeowners who embody seven timeless virtues—kindness, community, empowerment, joy, respect, generosity, and service—and shows how we can all practice these to improve the quality of our own lives as well as those around us. A Vietnam veteran finds peace where he was once engaged in war. An impoverished single mother offers her family's time and energy to enrich their neighbors' lives. A Zambian family of nine living in a makeshift tent makes room to shelter even more. A teenager grieving for his mother honors her love and memory by ensuring other people have a place to call home. A former president of the United States leads by example with a determined work ethic that motivates everyone around him to be the best version of themselves. These stories, and many others, illustrate how virtues become values, how cooperation becomes connection, and how even the smallest act of compassion can encourage actions that transform the world around us. Here are tales that will make readers laugh and cry and embrace with passion the calling of our better angels to change the way we take care of ourselves, our families, our communities, and the world.

Modern life tells us that it's up to us to forge our own identities and to make our lives significant. But the Christian gospel offers a strikingly different vision—one that reframes the way we understand ourselves, our families, our society, and God. Contrasting these two visions of life, Alan Noble invites us into a better understanding of who we are and to whom we belong.

There is a distinct hint of Armageddon in the air. According to The Nice and Accurate Prophecies of Agnes Nutter, Witch (recorded, thankfully, in 1655, before she blew up her entire village and all its inhabitants, who had gathered to watch her burn), the world will end on a Saturday. Next Saturday, in fact. So the armies of Good and Evil are amassing, the Four Bikers of the Apocalypse are revving up their mighty hogs and hitting the road, and the world's last two remaining witch-finders are getting ready to fight the good fight, armed with awkwardly antiquated instructions and stick pins. Atlantis is rising, frogs are falling, tempers are flaring. . . . Right. Everything appears to be going according to Divine Plan. Except that a somewhat fussy angel and a fast-living demon -- each of whom has lived among Earth's mortals for many millennia and has grown rather fond of the lifestyle -- are not particularly looking forward to the coming Rapture. If Crowley and Aziraphale are going to stop it from happening, they've got to find and kill the Antichrist (which is a shame, as he's a really nice kid). There's just one glitch: someone seems to have misplaced him. . . . First published in 1990, Neil Gaiman and Terry Pratchett's brilliantly dark and screamingly funny take on humankind's final judgment is back -- and just in time -- in a new hardcover edition (which includes an introduction by the authors, comments by each about the other, and answers to some still-burning questions about their wildly popular collaborative effort) that the devout and the damned alike will surely cherish until the end of all things.

How can you take the worst thing that ever happened to you... and use it to make thousands of children happy? Sadie Keller did just that. Told in her own words, this girl's inspiring story will stir the soul of anyone who wants to find hope in humanity. Diagnosed with cancer at age seven, Sadie sneaked into her mother's closet and filmed an instructional video to help kids like her. It became a viral sensation. Worried about whether Santa could deliver toys to all the kids in her hospital, she started a toy drive. It became a movement that turned into a foundation and a national year-round program that has collected tens of thousands of toys for kids battling cancer. Along the way Sadie met hundreds of cancer kids... and ended up having to say goodbye to some of her closest friends. To help save other children, Sadie teamed up with Congressman Michael McCaul. She became a star lobbyist, helping get a law passed that directed billions of dollars of research aimed at sparking next-level cures for childhood cancer. And she did it all by finding angels--friends, family, strangers, and some of the most powerful people in the world. Better Angels is a heartbreaking yet heartwarming tale of what it's like to face the possibility of death at a young age and how to turn it into a life-giving opportunity. It can serve as a user's manual for anyone who wants to change the world... by seeking and sparking love from the countless people who can help make it happen.

The first in-depth study of the Freemasons during the Civil War From first-person accounts culled from regimental histories, diaries, and letters, Michael A. Halleran has constructed an overview of 19th-century American freemasonry. The author examines carefully the major Masonic stories from the Civil War, in particular the myth that Confederate Lewis A. Armistead made the Masonic sign of distress as he lay dying at the high-water mark of Pickett's charge at Gettysburg.

Betrayed by love and forever scarred by a war in Vietnam, Henry Allen has had enough of life in Michigan and sets out on a journey home to Alaska. Although hopeless and unconvinced that there is anything left to live for, Henry holds fast to a promise made to an old friend during the war and an overpowering desire to return home after 20 years. While the long and winding road takes him back in miles and memories, he must once again confront shadows in his past that for so long he has been able to avoid knowing that the darkest of them still awaits at his journey's end.

We see the face of the Virgin Mary staring up at us from a grilled cheese sandwich and sell the uneaten portion of our meal for \$37,000 on eBay. While science offers a wealth of rational explanations for natural phenomena, we often prefer to embrace the fantasies that reassured our distant ancestors. And we'll even go to war to protect our delusions against those who do not share them. These are examples of what evolutionary psychologist Hank Davis calls Caveman Logic. Although some examples are funny, the condition itself is no laughing matter. In this engagingly written book, Davis encourages us to transcend the mental default settings and tribal loyalties that worked well for our ancestors back in the Pleistocene age. Davis laments a modern world in which more people believe in ESP, ghosts, and angels than in evolution. Superstition and religion get particularly critical treatment, although Davis argues that religion, itself, is not the problem but an inevitable by-product of how our minds misperform. Davis argues, It's time to move beyond the one-size-fits-all, safety and comfort-oriented settings that got our ancestors through the terrifying Pleistocene night. In contrast, Davis advocates a world in which spirituality is viewed as a dangerous rather than an admirable quality, and suggests ways in which we can overcome our innate predisposition toward irrationality. He concludes by pointing out that biology is not destiny. Just as some of us succeed in watching our diets, resisting violent impulses, and engaging in unselfish behavior, we can learn to use critical thinking and the insights of science to guide individual effort and social action in the service of our whole species. Hank Davis (Guelph, Ontario, Canada) is an award-winning professor of psychology who teaches at the University of Guelph. He is the author of several books and more than one hundred scientific papers.

This New York Times bestseller is an exciting and fearless investigation of language from the author of Better Angels of Our Nature and The Sense of Style and Enlightenment Now. "Curious, inventive, fearless, naughty." --The New York Times Book Review Bestselling author Steven Pinker possesses that rare combination of scientific aptitude and verbal eloquence that enables him to provide lucid explanations of deep and powerful ideas. His previous books - including the Pulitzer Prize finalist The Blank Slate - have catapulted him into the limelight as one of today's most important popular science writers. In The Stuff of Thought, Pinker presents a fascinating look at how our words explain our nature. Considering scientific questions with examples from everyday life, The Stuff of Thought is a brilliantly crafted and highly readable work that will appeal to fans of everything from The Selfish Gene and Blink to Eats, Shoots & Leaves.

Harvard psychologist Steven Pinker’s *The Better Angels of Our Nature: Why Violence Has Declined* (2012), is a robust tour of progress in human civilization across several centuries. Despite commonly held perceptions, influenced by a news media which incessantly dwells on the worst aspects of society, humanity has become less, not more violent over time... Purchase this in-depth summary to learn more. Leading scientists and science writers reflect on the life-changing, perspective-changing, new science of human goodness. In these pages you will hear from Steven Pinker, who asks, “Why is there peace?”; Robert Sapolsky, who examines violence among primates; Paul Ekman, who talks with the Dalai Lama about global compassion; Daniel Goleman, who proposes “constructive anger”; and many others. Led by renowned psychologist Dacher Keltner, the Greater Good Science Center, based at the University of California in Berkeley, has been at the forefront of the positive psychology movement, making discoveries about how and why people do good. Four times a year the center publishes its findings with essays on forgiveness, moral inspiration, and everyday ethics in *Greater Good* magazine. The best of these writings are collected here for the first time. A collection of personal stories and empirical research, *The Compassionate Instinct* will make you think not only about what it means to be happy and fulfilled but also about what it means to lead an ethical and compassionate life.

Aggie May, newly and unhappily retired from teaching, fears dementia when she begins to see visions from the past, like a 1950s-era Super Constellation at JFK airport and World War II soldiers at Grand Central Terminal. Then she gets a recruitment visit from Abe Irving of the American Association of Remarkable Persons ("the other AARP") who explains she has developed the ability to travel through time. Soon Aggie joins other "Remarkables" on a mission to nineteenth-century New York City in an effort to locate a missing photographic portrait of Abraham Lincoln created by the Civil War photographer Mathew Brady. While learning the rules and limits of time travel, Aggie faces the possibility that she may have both extraordinary power and extraordinary vulnerability. Aggie and Abe, two stubborn and independent people, must struggle to come to an understanding over how and when to take risks, including emotional risks.

War is a fact of human nature. As long as we exist, it exists. That's how the argument goes. But longtime *Scientific American* writer John Horgan disagrees. Applying the scientific method to war leads Horgan to a radical conclusion: biologically speaking, we are just as likely to be peaceful as violent. War is not preordained, and furthermore, it should be thought of as a solvable, scientific problem—like curing cancer. But war and cancer differ in at least one crucial way: whereas cancer is a stubborn aspect of nature, war is our creation. It's our choice whether to unmake it or not. In this compact, methodical treatise, Horgan examines dozens of examples and counterexamples—discussing chimpanzees and bonobos, warring and peaceful indigenous people, the World War I and Vietnam, Margaret Mead and General Sherman—as he finds his way to war’s complicated origins. Horgan argues for a far-reaching paradigm shift with profound implications for policy students, ethicists, military men and women, teachers, philosophers, or really, any engaged citizen.

On the eve of Shiloh, one of the bloodiest battles of the Civil War, a mysterious visitor appears at General William Tecumseh Sherman’s camp. Without family or home, with only a uniform and the name of Jesse, this prepossessing stranger is an intriguing mix of naiveté and wisdom, ignorant of the most basic conventions of warfare yet uncannily familiar with even the most intimate details of Sherman’s personal life and career. Jesse, in turn, has only one desire: to remain by Sherman’s side—for reasons only Jesse knows and isn’t revealing. Initially unwilling to become a father figure to this beguiling visitor, Sherman is finally unable to resist such devotion and tenacity. He takes Jesse under his wing, determined to train this enigmatic creature in the art of war—and provide the strength and wisdom needed to survive its horrors. Resourceful and courageous, Jesse soon earns the respect of Sherman’s men, especially the compassionate but plain-talking surgeon, Seth Cartwright, and Thomas Ransom, a noble and handsome young infantry officer. No matter their destiny neither man can divert Jesse’s mission. But what is the truth? What is Jesse’s purpose and why has this fascinating youth appeared at this most crucial time in Sherman’s life and in the life of the bitterly divided nation? In the end we are forced to ask: Who is under whose wing? *The Better Angels of Our Nature* brilliantly re-creates the drama and brutality of America’s Civil War. Set in the momentous fourteen-month period spanning Shiloh and Vicksburg—a time that turned the tide of war and determined the nation’s fate—this harrowing, lyrically written novel is filled with unforgettable characters and wondrous twists that will give readers pause to reconsider events familiar to us all. Meticulously researched and movingly written, this masterwork will remain with readers long after the last page is savored.

PLEASE NOTE: This is a key takeaways and analysis of the book and NOT the original book. Start Publishing Notes' Summary, Analysis, and Review of Steven Pinker's *The Better Angels of Our Nature: Why Violence Has Declined* includes: Summary of the book A Review Analysis & Key Takeaways A detailed "About the Author" section Preview: Steven Pinker's *The Better Angels of Our Nature* argues that violence has been decreasing over most of human history. People have innate tendencies towards violence, but

they also have innate tendencies towards peace. Historical developments, especially the consolidation of state power and the Enlightenment, have allowed humans to move away from violence, murder, and war, and move towards more peaceful ways of living. The Better Angels of Our Nature is a daring, provocative, and important book. As Pinker himself notes, journalists and pundits generally argue that the world is getting worse and that we live in uniquely dangerous or violent times. The September 11th attacks, the threat of terrorism, and the ongoing wars in the Middle East are presented as evidence of increasing violence, chaos, and instability. Pessimism is seen as realism, and policymakers declare that unprecedented effort is required to avert crises.

In The Better Angels of Our Nature Harvard psychologist Steven Pinker argued that modern history has witnessed a dramatic decline in human violence of every kind, and that in the present we are experiencing the most peaceful time in human history. But what do top historians think about Pinker's reading of the past? Does his argument stand up to historical analysis? In The Darker Angels of our Nature, seventeen scholars of international stature evaluate Pinker's arguments and find them lacking. Studying the history of violence from Japan and Russia to Native America, Medieval England and the Imperial Middle East, these scholars debunk the myth of non-violent modernity. Asserting that the real story of human violence is richer, more interesting and incomparably more complex than Pinker's sweeping, simplified narrative, this book tests, and bests, 'fake history' with expert knowledge.

"If I could give each of you a graduation present, it would be this—the most inspiring book I've ever read." —Bill Gates (May, 2017) Selected by The New York Times Book Review as a Notable Book of the Year The author of Enlightenment Now and The New York Times bestseller The Stuff of Thought offers a controversial history of violence. Faced with the ceaseless stream of news about war, crime, and terrorism, one could easily think we live in the most violent age ever seen. Yet as New York Times bestselling author Steven Pinker shows in this startling and engaging new work, just the opposite is true: violence has been diminishing for millenia and we may be living in the most peaceful time in our species's existence. For most of history, war, slavery, infanticide, child abuse, assassinations, programs, gruesome punishments, deadly quarrels, and genocide were ordinary features of life. But today, Pinker shows (with the help of more than a hundred graphs and maps) all these forms of violence have dwindled and are widely condemned. How has this happened? This groundbreaking book continues Pinker's exploration of the essence of human nature, mixing psychology and history to provide a remarkable picture of an increasingly nonviolent world. The key, he explains, is to understand our intrinsic motives--the inner demons that incline us toward violence and the better angels that steer us away--and how changing circumstances have allowed our better angels to prevail. Exploding fatalist myths about humankind's inherent violence and the curse of modernity, this ambitious and provocative book is sure to be hotly debated in living rooms and the Pentagon alike, and will challenge and change the way we think about our society.

The final book of the Bible, Revelation prophesies the ultimate judgement of mankind in a series of allegorical visions, grisly images and numerological predictions. According to these, empires will fall, the "Beast" will be destroyed and Christ will rule a new Jerusalem. With an introduction by Will Self.

A brilliant inquiry into the origins of human nature from the author of The Better Angels of Our Nature and Enlightenment Now. "Sweeping, erudite, sharply argued, and fun to read..also highly persuasive." --Time Now updated with a new afterword One of the world's leading experts on language and the mind explores the idea of human nature and its moral, emotional, and political colorings. With characteristic wit, lucidity, and insight, Pinker argues that the dogma that the mind has no innate traits—a doctrine held by many intellectuals during the past century—denies our common humanity and our individual preferences, replaces objective analyses of social problems with feel-good slogans, and distorts our understanding of politics, violence, parenting, and the arts. Injecting calm and rationality into debates that are notorious for ax-grinding and mud-slinging, Pinker shows the importance of an honest acknowledgment of human nature based on science and common sense.

Harriet Tubman, Harriet Beecher Stowe, Clara Barton, Julia Ward Howe, and Sarah Josepha Hale came from backgrounds that ranged from abject enslavement to New York City's elite. Surmounting social and political obstacles, they emerged before and during the worst crisis in American history, the Civil War. Their actions became strands in a tapestry of courage, truth, and patriotism that influenced the lives of millions—and illuminated a new way forward for the nation. In this collective biography, Robert C. Plumb traces these five remarkable women's awakenings to analyze how their experiences shaped their responses to the challenges, disappointments, and joys they encountered on their missions. Here is Tubman, fearless conductor on the Underground Railroad, alongside Stowe, the author who awakened the nation to the evils of slavery. Barton led an effort to provide medical supplies for field hospitals, and Union soldiers sang Howe's "Battle Hymn of the Republic" on the march. And, amid national catastrophe, Hale's campaign to make Thanksgiving a national holiday moved North and South toward reconciliation.

The murder of a world-famous physicist raises fears that the Illuminati are operating again after centuries of silence, and religion professor Robert Langdon is called in to assist with the case.

INSTANT NEW YORK TIMES BESTSELLER A NEW YORK TIMES NOTABLE BOOK OF 2018 ONE OF THE ECONOMIST'S BOOKS OF THE YEAR AND A PERFECT HOLIDAY GIFT "My new favorite book of all time." --Bill Gates If you think the world is coming to an end, think again: people are living longer, healthier, freer, and happier lives, and while our problems are formidable, the solutions lie in the Enlightenment ideal of using reason and science. Is the world really falling apart? Is the ideal of progress obsolete? In this elegant assessment of the human condition in the third millennium, cognitive scientist and public intellectual Steven Pinker urges us to step back from the gory headlines and prophecies of doom, which play to our psychological biases. Instead, follow the data: In seventy-five jaw-dropping graphs, Pinker shows that life, health, prosperity, safety, peace, knowledge, and happiness are on the rise, not just in the West, but worldwide. This progress is not the result of some cosmic force. It is a gift of the Enlightenment: the conviction that reason and science can enhance human flourishing. Far from being a naïve hope, the Enlightenment, we now know, has worked. But more than ever, it needs a vigorous defense. The Enlightenment project swims against currents of human nature--tribalism, authoritarianism, demonization, magical thinking--which demagogues are all too willing to exploit. Many commentators, committed to political, religious, or romantic ideologies, fight a rearguard action against it. The result is a corrosive fatalism and a willingness to wreck the precious institutions of liberal democracy and global cooperation. With intellectual depth and literary flair, Enlightenment Now makes the case for reason, science, and humanism: the ideals we need to confront our problems and continue our progress.

A graphic novel inspired by the true story of Kate Warne, America's first female detective and her signature achievement--cracking a plot by Confederate radicals to kill Abraham Lincoln. IN 1861, AMERICA'S GREATEST DETECTIVE SAVED THE LIFE OF ABRAHAM LINCOLN. AND THIS IS HER TRUE STORY. America is at a crossroads. Abraham Lincoln, the man tasked with healing the nation, and his family are the targets of a conspiracy to assassinate them. Their safety – and the future of the American experiment – hinges on the success of a new kind of lawman, known by a word still novel in the culture: detective. But there was only one detective whose extraordinary cleverness, versatility and mystery made them a singular individual who could save their lives. Her name was Kate Warne. And this is the true story of America's first woman detective, who saved the life of her country's greatest president and may have even surpassed the accomplishments of the famed Allan Pinkerton. Eisner & Emmy award winning writer Jeff Jensen (Green River Killer: A True Detective Story, HBO's Watchmen) and acclaimed artist George Schall (Credit) present the stunning story of the one detective who forever changed the course of American history.

When Charles McCarry's The Better Angels was first published almost 30 years ago, its premise--that terrorists would use passenger-filled airliners as tools of terror--seemed incredible. In retrospect, the novel would prove to be prophetic. The Better Angels takes place in an election year close to the turn of the century in a deeply polarized America. The presidential race matches a tall, lantern-jawed liberal to a far-right former businessman with deep ties to the energy industry. Meanwhile, Islamic terrorists led by an oil-rich Arab prince, desperate to acquire nuclear bombs to use against Israel or major American cities, disrupt the presidential campaign through a series of bloody suicide bombing. Finally the election itself is stolen, as one side hacks into computerized voting systems to change the tallies in key states. From the writer the New York Times Book Review called "the genuine article," The Better Angels is a thrilling and relevant masterwork.

Presents a controversial history of violence which argues that today's world is the most peaceful time in human existence, drawing on psychological insights into intrinsic values that are causing people to condemn violence as an acceptable measure.
