This tenth edition of Selman's The Fundamentals of Imaging Physics and Radiobiology is the continuation of a seminal work in radiation physics and radiation biology first published by Joseph Selman, MD, in 1954 by Charles C Thomas, Publisher, Ltd., Springfield, IL. Many significant changes have been made in this tenth edition. Color photographs and new illustrations have been provided for several existing chapters and for the new chapters in this book. Revisions and updates have been completed for Chapters 1 through 28, whereas Chapters 29 to 33 are all new. The overall style of Doctor Selman is still present, but, with any revision, the style of the present author is also present. In essence, the author's raison d'être in revising this book was to better reflect current radiology practice and to honor the work of Doctor Selman. Topics discussed in this textbook deal with the physics of x-radiation, the biological interaction of radiation with matter, and all aspects of imaging equipment and technology commonly found in the modern radiology department. The chapter on computed tomography (CT) has been heavily revised and updated. Protective measures regarding radiation safety and radiation hazards for workers and patients are thoroughly discussed and new chapters on dual energy x-ray absorptiometry (DXA), magnetic resonance imaging (MRI), ultrasound (US), fusion and molecular imaging have been added. This book will be very helpful to students about to take the ARRT (R) registry examination, but it is not a registry review book per se. This book also serves as a good overview of radiologic imaging physics for radiographers and other medical professionals.

Martha Boyne, Emily Clements and Ben Wright's Thrive: In your first three years in teaching equips trainee secondary school teachers with

the know-how to lay the foundations for a successful career in teaching, long after the challenging first few years are over. Martha, Emily and Ben are thriving teachers. In *Thrive* they share their personal experiences and demonstrate how you too can thrive during the tricky training year, the daunting NQT year and the crucial RQT year. Using their collective insights, and plenty of evidence-informed strategies and advice, they detail how you can get to grips with the classroom basics – from behaviour management and lesson planning to differentiation and providing for SEND – and effectively continue your professional development. This book is not just a survival manual to help teachers get through their first three years in teaching. Nor is it an academic text that has been written by authors who have only a distant memory of what it takes to stand in front of a class of teenagers for the first time. *Thrive* is something very different. It gives both the aspiring and the newly qualified the support and guidance to become a thriving teacher, and has been co-authored by three recently qualified teachers who in this book invest their passion and practical knowledge to inspire and inform others who want to pursue enjoyable and rewarding careers in teaching. *Thrive* is divided into three parts – specifically detailing what can be expected in the training year, NQT year and RQT year respectively – with the authors' commentary threaded throughout to demonstrate how the ideas discussed can be successfully put into practice. Their accounts are also complemented by expert advice from two people who are at the very top of their profession, Lianne Allison and Dr Simon Thompson, who provide wider perspectives drawn from a wealth of teaching experience. Forty of the book's forty-six chapters begin with a checklist outlining what a developing teacher is expected to do, and each chapter ends with a to-do list that can be used as a quick reference point to structure the strategies implemented. These to-do lists are also followed by lists of suggested further reading so that readers can delve deeper into topics and fields of research that they find particularly interesting or relevant. Furthermore, the book offers helpful counsel on choosing the best training route as well as an in-depth analysis of the change in priorities for busy teachers as they progress: encouraging constant reflection, outlining potential pathways and emphasising the importance of evidence-based practice and how new teachers can, and should, incorporate this into their teaching. Rooted in practical strategies and innovative ideas, *Thrive* is the essential guide for trainee secondary school teachers and teacher trainers.

'100 Things to Learn before you're 10' is an educational book to help parents. Drawing on 40 years teaching experience, it explains why every child would benefit from the little extra help it provides during their formation years. This book is packed with examples, activities, insights and stories. It helps show you how to make sure your children learn the skills they need to get the most out of school and life. Give your child what they really need so that they become happier, more confident and self assured as they learn. They will grow to be well rounded adults! It is during the first 12 years after birth that each life develops the framework for its future. Parents who are juggling the demands of modern life and work, while they are raising their children ask many questions. They may often feel their children 'could do better' and become very concerned if a child's school report highlights this. However, many parents aren't confident with changing children's attitudes, what to teach or how to really motivate and encourage them. Especially if the children have 'switched off' and no longer respond to what their parents say. This book addresses these issues and questions and looks at the reasons why so many children underperform at school and what can be done about aligning them at core, so that they stay connected to the positive influences that are in them at birth. It puts forward tried and tested lessons, tools and strategies that have been developed during forty years of teaching experience and have been repeatedly proven effective with children.
