The windswept isles of Earthsea were famous for wizards, and the greatest was Ged. Hungry for power and knowledge he tampered with long-held secrets and loosed a terrible shadow upon the world. This book, a complete guide to the operation and features of the Canon PowerShot S95, is a follow-up to the author's earlier guides to advanced compact digital cameras, including the Leica D-Lux 4 and D-Lux 5, and the Panasonic Lumix LX3 and LX5. The new book, like the earlier ones, explains all operations, features, menus, and controls of the camera in clear language, providing guidance not only about how to accomplish things with the camera, but when and why to use certain features. The book does not assume any specialized knowledge by the reader, but adopts a patient and helpful tone in explaining topics such as autofocus, manual focus, depth of field, aperture priority, shutter priority, HDR (High Dynamic Range) photography, and RAW files. The book's more than 170 color photographs provide illustrations of the camera's controls and menus, and also include examples of the various types of photographs that can be taken using the many creative settings of the camera, including the My Colors settings, which let the photographer alter the color processing of images; the Scene mode, with settings that are optimized for various subjects, including landscapes, portraits, and underwater shots; and special features such as the Smart Shutter and Miniature Effect options. In addition, the book goes beyond the realm of everyday photography, and provides introductions to more advanced topics such as infrared photography, street photography, macro photography and creating 3D (three-dimensional) images that can be viewed with conventional red and blue 3D glasses. The book also includes a full discussion of the video recording abilities of the PowerShot S95, which can record high-definition (HD) video with stereo sound. In three appendices, the book provides information about accessories available for the camera, sets forth a list of useful web sites and other resources for further information, and includes a section with helpful "quick tips" that give particular insights into how to take advantage of the camera's advanced features in the most efficient ways possible. The book includes a detailed Table of Contents and a full Index, so the reader can quickly find needed information about any particular feature or aspect of the camera.

When her lover is imprisoned, Christa—a centuries-old harper—must set her free using the greatest weapon she possesses: music In ancient Ireland, Chairiste Ní Cummen, a harper, was trained in the secrets of music and magic, but her curiosity and pride trapped her and her lover in the realm of the fairy folk, the Sidh. Chairiste alone managed to escape, and now, living in the modern world as Christa Cruitaire, a quiet harp teacher, she is all but resigned to her inability to win her beloved's freedom . . . until she discovers that the volume and violence of the electric guitar and heavy metal might prove brutal enough to forcibly breach the barriers between the human and fairy worlds. With the aid of her bandmates—who must themselves overcome inner demons of abuse, addiction, and prejudice—Christa is determined to use her newfound musical power to rescue the woman she loves. Audacious and heartfelt, *Gossamer Axe* is an entirely original hero's journey, an ode to the power of music and the human spirit alike, charged with rapier-sharp social commentary.

This Synthesis Lecture presents a discussion of Quality of Service (QoS) in wireless networks over unlicensed spectrum. The topic is presented from the point of view of protocols for wireless networks (e.g., 802.11) rather than the physical layer point of view usually discussed for cellular networks in the licensed wireless spectrum. A large number of mobile multimedia wireless applications are being deployed over WiFi (IEEE 802.11) and Bluetooth wireless networks and the number will increase in the future as more phones, tablets, and laptops are equipped with these unlicensed spectrum wireless interfaces. Achieving QoS objectives in wireless networks is challenging due to limited wireless resources, wireless nodes interference, wireless shared media, node mobility, and diverse topologies. The author presents the QoS problem as (1) an optimization problem with different constraints coming from the interference, mobility, and wireless resource constraints and (2) an algorithmic problem with fundamental algorithmic functions within wireless resource management and protocols. Table of Contents: Preface / Basics of Quality of Service in Wireless Networks / QoS-Aware Resource Allocation / Bandwidth Management / Delay Management / Routing / Acknowledgment / References / Author Biography

Architectural facades now have the potential to be literally kinetic, through automated sunscreens and a range of animated surfaces. This book explores the aesthetic potential of these new types of moving facades. Critique of theory and practice in architecture is combined here with ideas from kinetic art of the 1960's. From this background the basic principles of kinetics are defined and are used to generate experimental computer animations. By classifying the animations, a theory of kinetic form called 'state change' is developed. This design research provides a unique and timely resource for those interested in the capacity of kinetics to enliven the public face of architecture. Extra material including animations can be seen at www.kineticarch.net/statechange

Reporting U.S.-European Relations: Four Nations, Four Newspapers is a compilation of U.S. and European perspectives from different daily newspapers. Chapter 1 is about the Frankfurter Allgemeine Zeitung (FAZ). After a brief background of the newspaper, from one dictator to another, the paper is described as having no editor. The political, economic, and cultural policies are made by "editor-publishers." Political philosophy in the FAZ is very cohesive and conservative, which readers of a wide political spectrum rely upon. Chapter 2 deals with the New York Times, which is founded in 1851 and has undergone many changes, making it the most respected daily newspaper in the United States. This circulation is considered a chronologist of current events, and more than an opinion maker, it is also considered an educator. Chapter 3 is about The Times (London), founded in 1785 under a different name. This circulation is one of the most influential newspapers in the world, with a succession of notable editors. Considered by some as boring, this newspaper is bought by Rupert Murdoch, making it still in substance a uniquely British expression of life. Chapter 4 is about Le Monde, founded in December 1944 upon the request of General Charles de Gaulle. This circulation is considered the most important and prestigious daily newspaper in France, very nationalistic, and a receptacle for debate. This collection of essays will prove invaluable to practicing journalists, politicians, public and government leaders, and students of journalism. Writers and authors will also find this collection entertaining and informative.
